$$V_{\alpha;\beta} V^{\beta} = (sV_{\alpha}/s\tau) = A_{\alpha}$$

$$V_{\alpha;\gamma} P_{\beta}^{\gamma} = V_{\alpha;\gamma} [\delta_{\beta}^{\gamma} + c^{-2} V^{\gamma} V_{\beta}]$$

$$= V_{\alpha;\beta} + c^{-2} V_{\beta} V^{\gamma} V_{\alpha;\gamma} = V_{\alpha;\beta} + c^{-2} V_{\beta} A_{\alpha}$$

$$\Rightarrow V_{\alpha;\beta} = V_{\alpha;\gamma} P_{\beta}^{\gamma} - c^{-2} V_{\beta} A_{\alpha}$$

$$\omega_{\alpha\beta} = \frac{1}{2} [V_{\alpha;\gamma} P_{\beta}^{\gamma} - V_{\beta;\gamma} P_{\alpha}^{\gamma}]$$

$$e'_{\alpha\beta} = \frac{1}{2} [V_{\alpha;\gamma} P_{\beta}^{\gamma} + V_{\beta;\gamma} P_{\alpha}^{\gamma}]$$

$$V_{\alpha;\gamma} P_{\beta}^{\gamma} = \omega_{\alpha\beta} + e'_{\alpha\beta} = V_{\alpha;\beta} + c^{-2} A_{\alpha} V_{\beta}$$

$$\text{or } V_{\alpha;\beta} = e'_{\alpha\beta} + \omega_{\alpha\beta} - c^{-2} A_{\alpha} V_{\beta}$$

Then if  $e_{\alpha\beta} = e'_{\alpha\beta} - \frac{1}{3} \Theta P_{\alpha\beta}$

we have

$$V_{\alpha;\beta} = e_{\alpha\beta} + \omega_{\alpha\beta} + \frac{1}{3} \Theta P_{\alpha\beta} - c^{-2} A_{\alpha} V_{\beta}$$

$$V^{\alpha} e_{\alpha\beta} = \frac{V^{\alpha}}{2} (V_{\alpha;\gamma} P_{\beta}^{\gamma} + V_{\beta;\gamma} P_{\alpha}^{\gamma}) - \frac{V^{\alpha}}{3} V_{\gamma;\beta} P_{\alpha}^{\gamma}$$

$$= \frac{1}{2} \{ V^{\alpha} V_{\alpha;\gamma} P_{\beta}^{\gamma} + V^{\alpha} V_{\beta;\gamma} P_{\alpha}^{\gamma} \} - \frac{1}{3} V^{\alpha} V_{\gamma;\beta} P_{\alpha}^{\gamma}$$

$$= \frac{1}{2} \{ V^{\alpha} V_{\alpha;\gamma} (\delta_{\beta}^{\gamma} + c^{-2} V^{\gamma} V_{\beta}) + V^{\alpha} V_{\beta;\gamma} (\delta_{\alpha}^{\gamma} + c^{-2} V^{\gamma} V_{\alpha}) \}$$

$$- \frac{1}{3} V^{\alpha} V_{\gamma;\beta} [g_{\alpha\beta} + c^{-2} V_{\alpha} V_{\beta}]$$

$$= \frac{1}{2} \{ V^{\alpha} V_{\alpha;\beta} + c^{-2} V^{\alpha} V^{\gamma} V_{\alpha;\gamma} V_{\beta} + V^{\alpha} V_{\beta;\alpha} + c^{-2} V^{\alpha} V_{\alpha}^{\gamma} V^{\delta} V_{\beta;\delta} \}$$

$$- \frac{1}{3} V_{\beta}^{\gamma} V_{\gamma;\alpha} - \frac{1}{3} c^{-2} V^{\alpha} V_{\alpha} V_{\beta} V_{\gamma;\delta}$$

$$= \frac{1}{2} \{ V^{\alpha} V_{\alpha;\beta} + c^{-2} A_{\alpha} V^{\alpha} V_{\beta} + A_{\beta} - V^{\gamma} V_{\beta;\gamma} \} - \frac{1}{3} V_{\beta}^{\gamma} V_{\gamma;\alpha} + \frac{1}{3} V_{\alpha}^{\gamma} V_{\gamma;\beta}$$

$$V_{\alpha} P_{\beta}^{\alpha} = V_{\beta} P_{\alpha}^{\beta} = 0$$

$$V_{\alpha} [S_{\beta}^{\alpha} + c^{-2} V^{\alpha} V_{\beta}] = V_{\beta} + c^{-2} V_{\beta} (V^{\alpha} V_{\alpha}) = 0$$

Now  $V^{\alpha} V_{\beta;\alpha} = A_{\beta}$ , hence the ~~second~~ <sup>2nd + 4th</sup> terms cancel, leaving

$$V^{\alpha} e_{\alpha\beta} = \frac{1}{2} \left\{ V^{\alpha} V_{\alpha;\beta} + c^{-2} A_{\alpha} V^{\alpha} V_{\beta} \right\}$$

$$= \frac{1}{2} \left\{ V^{\beta} V_{\beta;\alpha} + c^{-2} V_{\beta} V^{\alpha} A_{\alpha} \right\} = \frac{V_{\beta}}{2} \left[ V_{\beta;\alpha} + c^{-2} V^{\alpha} A_{\alpha} \right]$$

$$V_{\alpha} P_{\beta}^{\alpha} = 0$$

$$V_{\alpha} A^{\alpha} = 0$$

$$\text{Now } A_{\alpha} = a V_{\alpha} + a_{\alpha}$$

~~$$V_{\beta;\alpha} P_{\beta}^{\alpha} + c^{-2} V_{\beta} A_{\alpha} V^{\alpha}$$~~

~~$$V^{\alpha} e_{\alpha\beta} = \frac{V_{\beta}}{2} \left[ V_{\beta;\alpha} + c^{-2} V^{\alpha} (a V_{\alpha} + g_{\alpha\gamma} P_{\beta}^{\gamma} A^{\beta}) \right]$$~~

~~$$= \frac{V_{\beta}}{2} \left[ V_{\beta;\alpha} + c^{-2} a V^{\alpha} V_{\alpha} + c^{-2} V^{\alpha} P_{\alpha\beta} A^{\beta} \right]$$~~

Section 89.1 The Photon Four-Momentum

89.4  $ds^2 = (h_1 dx^1)^2 + (h_2 dx^2)^2 + (h_3 dx^3)^2$   
 $= dr^2 + r^2 d\theta^2 + r^2 \sin^2 \theta d\phi^2$

$n_r = \mu$   
 $n_\theta = (1-\mu^2)^{1/2} \cos \phi$   
 $n_\phi = (1-\mu^2)^{1/2} \sin \phi$

hence  
 $n^{(r)} = \mu$   
 $n^{(\theta)} = (1-\mu^2)^{1/2} \cos \phi / r$   
 $n^{(\phi)} = (1-\mu^2)^{1/2} \sin \phi / r \sin \theta$

and  $M^1 = (h\nu/c) n^{(r)}$  ;  $M^2 = (h\nu/c) n^{(\theta)}$  ;  $M^3 = (h\nu/c) n^{(\phi)}$

(1) (89.5) + (89.6) [next page] to obtain (89.10) and (89.11)

$$\begin{pmatrix} m_0^0 \\ m_0^1 \\ m_0^2 \\ m_0^3 \end{pmatrix} = \frac{h\nu_0}{c} \begin{pmatrix} 1 \\ \mu_0 \\ (1-\mu_0^2)^{1/2} \cos \phi_0 \\ (1-\mu_0^2)^{1/2} \sin \phi_0 \end{pmatrix} = \begin{pmatrix} \gamma - \gamma v_z/c & 0 & 0 \\ -\gamma v_z/c [\frac{1}{\gamma} + (\gamma-1)\beta^2 \beta^2] & 0 & 0 \\ 0 & 0 [\frac{1}{\gamma} + (\gamma-1)\beta^2 \beta^2] & 0 \\ 0 & 0 & 0 [\frac{1}{\gamma} + (\gamma-1)\beta^2 \beta^2] \end{pmatrix} \begin{pmatrix} 1 \\ \mu \\ (1-\mu^2)^{1/2} \cos \phi \\ (1-\mu^2)^{1/2} \sin \phi \end{pmatrix} \frac{h\nu}{c}$$

(a)  $\nu_0 = \gamma \nu - \gamma v_z \frac{\nu}{c} \mu = \gamma \nu (\gamma - \beta \mu)$   
 $\frac{h\nu_0}{c} \mu_0 = -\gamma \beta \frac{h\nu}{c} + [\frac{1}{\gamma} + (\gamma-1)\beta^2 \beta^2] \mu \frac{h\nu}{c}$   
 $\Rightarrow \nu_0 \mu_0 = -\gamma \beta \nu + \mu \nu (\gamma - \beta) + \mu \nu = \gamma \nu (\mu - \beta)$   
 hence  $\mu_0 \cdot \gamma \nu (1 - \beta \mu) = \gamma \nu (\mu - \beta)$

(b)  $\mu_0 = (\mu - \beta) / (1 - \beta \mu)$   
 $(1-\mu_0^2)^{1/2} \cos \phi_0 \frac{h\nu_0}{c} = [\frac{1}{\gamma} + (\gamma-1)\beta^2 \beta^2] (1-\mu^2)^{1/2} \cos \phi \frac{h\nu}{c}$   
 $(1-\mu_0^2)^{1/2} \cos \phi_0 \nu_0 = (1-\mu^2)^{1/2} \cos \phi \nu$   
 $\gamma \nu (1 - \beta \mu) (1-\mu_0^2)^{1/2} \cos \phi_0 = \nu (1-\mu^2)^{1/2} \cos \phi$   
 $(1-\mu_0^2)^{1/2} \cos \phi_0 = (1-\mu^2)^{1/2} \cos \phi / [\gamma (1 - \beta \mu)]$

Similarly  $(1-\mu_0^2)^{1/2} \sin \phi_0 = (1-\mu^2)^{1/2} \sin \phi / [\gamma (1 - \beta \mu)]$

(c) + (d) From which:  $\phi_0 = \phi$   $(1-\mu_0^2)^{1/2} = (1-\mu^2)^{1/2} / [\gamma (1 - \beta \mu)]$

$$\begin{pmatrix} \gamma_0 \\ \gamma_0 \underline{n}_0 \end{pmatrix} = \begin{pmatrix} \gamma & -\gamma \underline{\beta} \\ -\gamma \underline{\beta} & \underline{I} + (\gamma-1) \underline{\beta} \underline{\beta}^T \end{pmatrix} \begin{pmatrix} \gamma \\ \gamma \underline{n} \end{pmatrix}$$

(89.5)

$$\gamma_0 = \gamma \gamma - \gamma \underline{\beta} \cdot \gamma \underline{n} = \gamma \gamma (1 - \underline{\beta} \cdot \underline{n}) = \gamma \gamma (1 - \underline{n} \cdot \underline{v} / c)$$

$$\begin{aligned} \gamma_0 \underline{n}_0 &= -\gamma \underline{\beta} \gamma + [\underline{I} + (\gamma-1) \underline{\beta} \underline{\beta}^T] \cdot \gamma \underline{n} = \gamma \underline{n} - \gamma \underline{v} \underline{v} / c^2 + \gamma (\gamma-1) (\underline{v} \cdot \underline{n}) \underline{v} / v^2 \\ &= \gamma \underline{n} - \gamma \underline{v} \underline{v} / c^2 [1 - (\underline{n} \cdot \underline{v} / v^2) (\gamma-1) / \gamma] \end{aligned}$$

$$\begin{aligned} \text{now } (\gamma-1) / \gamma &= (\gamma-1)(\gamma+1) / \gamma(\gamma+1) = (\gamma^2-1) / [\gamma(\gamma+1)] = [1 - v^2/c^2]^{-1} \frac{1}{\gamma(\gamma+1)} \\ &= (v^2/c^2) \frac{1}{(1-v^2/c^2)} \frac{1}{\gamma(\gamma+1)} = \frac{\gamma^2}{\gamma(\gamma+1)} \frac{v^2}{c^2} = \frac{\gamma}{\gamma+1} \frac{v^2}{c^2} \end{aligned}$$

hence

(89.6)

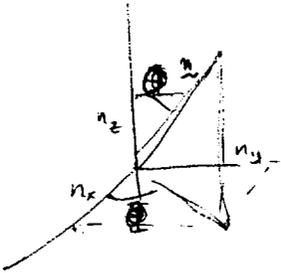

$$\gamma_0 \underline{n}_0 = \gamma \underline{n} - \gamma \underline{v} \underline{v} / c^2 [1 - \frac{\underline{n} \cdot \underline{v} / c}{v^2} \frac{\gamma}{\gamma+1} \frac{v^2}{c^2}] = \gamma \underline{n} - \gamma \underline{v} \underline{v} / c^2 [1 - \frac{\underline{n} \cdot \underline{v}}{c} \frac{\gamma}{\gamma+1}]$$

Inverse:

$$\begin{pmatrix} \gamma \\ \gamma \underline{n} \end{pmatrix} = \begin{pmatrix} \gamma & \gamma \underline{\beta} \\ \gamma \underline{\beta} & \underline{I} + (\gamma-1) \underline{\beta} \underline{\beta}^T \end{pmatrix} \begin{pmatrix} \gamma_0 \\ \gamma_0 \underline{n}_0 \end{pmatrix}$$

$$\gamma = \gamma \gamma_0 + \gamma \underline{\beta} \cdot \gamma_0 \underline{n}_0 = \gamma \gamma_0 [1 + \underline{n}_0 \cdot \underline{v} / c]$$

$$\begin{aligned} \gamma \underline{n} &= \gamma \underline{\beta} \gamma_0 + [\underline{I} + (\gamma-1) \underline{\beta} \underline{\beta}^T] \gamma_0 \underline{n}_0 = \gamma \underline{\beta} \gamma_0 + \gamma_0 \underline{n}_0 + (\gamma-1) (\underline{v} \cdot \underline{n}_0 / v^2) \underline{v} \\ &= \gamma_0 \underline{n}_0 + \gamma [1 + (\gamma-1) \frac{\underline{v} \cdot \underline{n}_0}{v^2}] \frac{\underline{v}}{c} = \gamma_0 \underline{n}_0 + \gamma \frac{\underline{v}}{c} [1 + \frac{\underline{v} \cdot \underline{n}_0}{\gamma v} \frac{\gamma}{\gamma+1} / c] \end{aligned}$$

$$\begin{array}{r} .005 \\ 50 \\ \hline 0.250 \end{array}$$

$$00.125.36000000$$

$$125.36$$

Section 90: Transformation Laws for the Specific Intensity, Opacity + Emissivity

$$N = \left(\frac{I}{h\nu}\right) (d\omega d\nu) (dS \cos \theta dt) = \left(\frac{I}{h\nu}\right) \left(\frac{\nu d\nu d\omega}{\nu}\right) (dS dt) \mu$$

$$N_0 = \left(\frac{I_0}{h\nu_0}\right) (d\omega_0 d\nu_0) (dS \cos \theta_0 dt_0 + \beta dS dt_0)$$

$$= \left(\frac{I_0}{h\nu_0}\right) \left(\frac{\nu_0 d\nu_0 d\omega_0}{\nu_0}\right) (dS dt_0) (\mu_0 + \beta)$$

Now since  $N = N_0$ :

$$\left(\frac{I_0}{h\nu_0}\right) \frac{dt_0}{\nu_0} (\mu_0 + \beta) \left[ dS \cancel{\nu_0 d\nu_0 d\omega_0} \right] = \left(\frac{I}{h\nu}\right) \frac{dt}{\nu} \mu \left[ dS \cancel{\nu d\nu d\omega} \right]$$

$$dt_0 = \gamma dt$$

$$\mu = (\mu_0 + \beta) / (1 + \beta \mu_0) \text{ but } (1 + \beta \mu_0) = \gamma / \gamma \nu_0 \text{ hence}$$

$$\mu = (\mu_0 + \beta) (\gamma \nu_0 / \nu)$$

Therefore

$$\frac{I_0}{\nu_0^2} \cancel{\gamma dt} (\mu_0 + \beta) = \frac{I}{\nu^2} dt (\mu_0 + \beta) \left(\frac{\gamma \nu_0}{\nu}\right)$$

$$(90.3) \Rightarrow I(\mu, \nu) = (\nu / \nu_0)^3 I_0(\mu_0, \nu_0)$$

$$\text{or } (I / \nu^3) = (I_0 / \nu_0^3) = \text{Lorentz invariant}$$

$$\eta_0 d\omega_0 d\nu_0 dV_0 dt_0 / h\nu_0 = \eta d\omega d\nu dV dt / h\nu$$

$dV dt$  is an invariant; and  $\nu d\nu d\omega$  is invariant, hence

$$\eta_0 \left(\frac{\nu_0 d\nu_0 d\omega_0}{\nu_0}\right) \frac{1}{\nu_0} = \eta \left(\frac{\nu d\nu d\omega}{\nu}\right) \frac{1}{\nu}$$

$$(90.6) \Rightarrow \eta_0 / \nu_0^2 = \eta / \nu^2$$

$$\chi_0 I_0 (d\nu_0 d\omega_0 dV_0 dt_0) / \nu_0 \nu_0 = \chi I (d\nu d\omega dV dt) / \nu \nu$$

$$\Rightarrow \chi_0 I_0 (\nu_0 d\nu_0 d\omega_0 / \nu_0) (1/\nu_0) = \chi I (\nu d\nu d\omega / \nu) (1/\nu)$$

$$\chi_0 I_0 / \nu_0^2 = \chi I / \nu^2$$

But  $I = (\nu^3 / \nu_0^3) I_0$  hence

$$\chi_0 I_0 / \nu_0^2 = \chi I_0 (\nu^3 / \nu_0^3) / \nu^2$$

$$\chi_0 \nu_0 = \chi \nu$$

$$\frac{1}{c} \frac{\partial I}{\partial t} + \mu \frac{\partial I}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial I}{\partial \mu} = \eta - \chi I$$

$$89.7: v = \gamma v_0 (1 + \frac{u_0 v}{c})$$

$$90.3: I = (v/v_0)^3 I_0$$

$$90.6: \eta = (v/v_0)^2 \eta_0$$

$$90.8: \chi = (v_0/v) \chi_0$$

$$\Rightarrow \frac{1}{c} \frac{\partial}{\partial t} \left( \frac{v^3}{v_0^3} I_0 \right) + \mu \frac{\partial}{\partial r} \left( \frac{v^3}{v_0^3} I_0 \right) + \frac{(1-\mu^2)}{r} \frac{\partial}{\partial \mu} \left( \frac{v^3}{v_0^3} I_0 \right) = \frac{v^2}{v_0^2} \eta_0 - \left( \frac{v_0}{v} \right) \chi_0 \left( \frac{v^3}{v_0^3} \right) I_0$$

$$= \frac{v^3}{v_0^3} \left\{ \frac{1}{c} \frac{\partial I_0}{\partial t} + \mu \frac{\partial I_0}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial I_0}{\partial \mu} \right\} - 3 \frac{v^3}{v_0^3} \left\{ \frac{I_0}{c} \frac{\partial v_0}{\partial t} + \mu I_0 \frac{\partial v_0}{\partial r} + \frac{(1-\mu^2)}{r} I_0 \frac{\partial v_0}{\partial \mu} \right\}$$

$$= \frac{v^2}{v_0^2} [\eta_0 - \chi_0 I_0]$$

$$\Rightarrow \frac{v}{v_0} \left\{ \frac{1}{c} \frac{\partial I_0}{\partial t} + \mu \frac{\partial I_0}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial I_0}{\partial \mu} \right\} - 3 \frac{v}{v_0^2} I_0 \left\{ \frac{1}{c} \frac{\partial v_0}{\partial t} + \mu \frac{\partial v_0}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial v_0}{\partial \mu} \right\} = \eta_0 - \chi_0 I_0$$

now

$$\frac{\partial}{\partial t} = \frac{\partial}{\partial t} \Big|_{r, \mu, v_0} + \frac{\partial \mu_0}{\partial t} \Big|_{r, \mu} \frac{\partial}{\partial v_0} + \frac{\partial v_0}{\partial t} \Big|_{r, \mu} \frac{\partial}{\partial v_0}$$

hence

$$\frac{v}{v_0} \frac{1}{c} \frac{\partial I_0}{\partial t} \rightarrow \frac{v}{v_0} \frac{1}{c} \left[ \frac{\partial I_0}{\partial t} + \frac{\partial \mu_0}{\partial t} \frac{\partial I_0}{\partial \mu_0} + \frac{\partial v_0}{\partial t} \frac{\partial I_0}{\partial v_0} \right]; \frac{1}{c} \frac{\partial v_0}{\partial t} \rightarrow \frac{1}{c} \left[ \frac{\partial v_0}{\partial t} + \right.$$

Section 91: The Radiation Stress-Energy Tensor and Four-Force Vector

$$R^{\alpha\beta} = c^{-1} \int dv \int d\omega I n^\alpha n^\beta \quad n^0 = 1$$

$$\begin{aligned} & \int dv \int d\omega (I/v^3) \left(\frac{h\nu}{c} n^\alpha\right) \left(\frac{h\nu}{c} n^\beta\right) = \frac{h^2}{c^2} \int dv \int d\omega I n^\alpha n^\beta \\ & = \text{product of } M^\alpha M^\beta; (I/v^3); v dv d\omega \\ & = (h^2/c) R^{\alpha\beta} \end{aligned}$$

$$R^{\alpha\beta} = c^2 \int_{\mathcal{R}} M^\alpha M^\beta d^3M / \tilde{e} \quad \tilde{e} = h\nu \quad M^\alpha = \frac{h\nu}{c} n^\alpha \text{ etc.}$$

From (63.4)  $f_R = \frac{c^2}{h^4 v^3} \mathbb{I}$

Also  $d^3M = p^2 dp d\omega$ ,  $p = \frac{h\nu}{c} \Rightarrow d^3M = \frac{h^3}{c^3} v^2 dv d\omega$   
hence

$$\begin{aligned} R^{\alpha\beta} &= c^2 \int \left[ \frac{c^2}{h^4 v^3} \mathbb{I} \right] \left(\frac{h\nu}{c} n^\alpha\right) \left(\frac{h\nu}{c} n^\beta\right) \frac{h^3 v^2 dv d\omega}{h\nu} \\ &= \frac{c^4 h^5}{c^5 h^5} \int \frac{\mathbb{I}}{v^3} v^2 n^\alpha n^\beta \cdot \frac{v^2 dv d\omega}{v} \end{aligned}$$

(91.6)

$$\boxed{R^{\alpha\beta} = c^{-1} \int \mathbb{I} n^\alpha n^\beta dv d\omega}$$

(91.7) From (64.4)  $E_\nu = c^{-1} \int I d\omega$   
(64.5)  $E = \int dv E_\nu = c^{-1} \int dv \int I d\omega = R^{00}$

(65.2)  $\underline{F}_\nu = \int \mathbb{I} \underline{n} d\omega \quad F_\nu^i = \int \mathbb{I} n^i d\omega$

(65.4)  $F^i = \int dv F_\nu = \int dv \int d\omega \mathbb{I} n^i \quad i=1,2,3$

hence

$$R^{0i} = c^{-1} F^i$$

$$R^{i0} = c^{-1} F^i$$

Finally  $P_{\nu}^{ij} = c^{-1} \int \mathbb{I} n^i n^j d\omega \quad (66.3)$

$$P^{ij} = c^{-1} \int dv \int \mathbb{I} n^i n^j d\omega = R^{ij} \quad i, j = 1, 2, 3$$

Relate  $E$  to  $E^0$  :

$$E = c' \int \mathbf{I} \, dv \, dw = c^{-1} \int \frac{\mathbf{I}}{v^3} (v \, dv \, dw) \left(\frac{h\nu}{c}\right) \left(\frac{h\nu}{c}\right) \frac{c^2}{h^2}$$

$$= c^{-1} \int \left[ \frac{\mathbf{I}^0}{v_0^3} (v_0 \, dv_0 \, dw_0) \right] v_0^2 \gamma^2 [1 + \beta \cdot \underline{n}]^2$$

$$= c^{-1} \int \mathbf{I}_0 \, dv_0 \, dw_0 \cdot \gamma^2 [1 + \beta \cdot \underline{n}]^2$$

$$E = c^{-1} \gamma^2 \left\{ \int \mathbf{I}_0 \, dv_0 \, dw_0 + 2\beta \cdot \int \mathbf{I}_0 \, dv_0 \, dw_0 \underline{n}_0 + \int \mathbf{I}_0 \, dv_0 \, dw_0 \beta \cdot \underline{n}_0 \beta \cdot \underline{n}_0 \right\}$$

(9.1.10)

$$E = \gamma^2 \left\{ E_0 + 2c^{-2} v_i F_0^i + c^{-2} v_i v_j P_0^{ij} \right\}$$

Lorentz transform of  $F$  :

$$F^i = \int \mathbf{I} \, n^i \, dv \, dw = \int \left[ \frac{\mathbf{I}}{v^3} (v \, dv \, dw) \right] v^2 n^i$$

$$= \int \left[ \frac{\mathbf{I}_0}{v_0^3} v_0 \, dv_0 \, dw_0 \right] v_0^2 \gamma \cdot [1 + \beta \cdot \underline{n}] v_0 \left\{ n_0^i + \gamma v_0^i / c \left[ 1 + \frac{\gamma \underline{n}_0 \cdot \underline{v}}{c(\gamma+1)} \right] \right\}$$

$$= \gamma \int \mathbf{I}_0 \, dv_0 \, dw_0 [1 + \beta \cdot \underline{n}_0] \left[ n_0^i + \gamma v_0^i / c + \gamma^2 n_0^j v_j v^i / c^2 (\gamma+1) \right]$$

$$= \gamma \int \mathbf{I}_0 \, dv_0 \, dw_0 (1 + v_k n_0^k / c) \left[ n_0^i + \gamma v_0^i / c + \gamma^2 n_0^j v_j v^i / c^2 (\gamma+1) \right]$$

$$= \gamma \int \mathbf{I}_0 \, dv_0 \, dw_0 \left\{ n_0^i + \gamma v_0^i / c + \gamma^2 n_0^j v_j v^i / c^2 (\gamma+1) + v_k n_0^i n_0^k + \gamma v_0^i v_k n_0^k / c \right.$$

$$\left. + \gamma^2 n_0^j n_0^k v_j v_k / c^2 (\gamma+1) \right\}$$

$$= (\gamma^2 v_0^i / c) \int \mathbf{I}_0 \, dv_0 \, dw_0 + \gamma \int \mathbf{I}_0 \, dv_0 \, dw_0 n_0^i + (\gamma^3 v_0^i v_j / c^2 (\gamma+1)) \int \mathbf{I}_0 n_0^j \, dv_0 \, dw_0$$

$$+ \gamma v_k \int \mathbf{I}_0 n_0^i n_0^k \, dv_0 \, dw_0 + \gamma^2 v_0^i v_k / c^2 \int \mathbf{I}_0 n_0^k \, dv_0 \, dw_0 + (\gamma^3 v_0^i v_j v_k / c^3 (\gamma+1)) \int \mathbf{I}_0 n_0^j n_0^k \, dv_0 \, dw_0$$

$$= \gamma^2 v_0^i E_0 + \gamma F_0^i + \left[ \gamma^3 / (\gamma+1) \right] c^{-2} v_0^i v_j F_0^j + \gamma v_k P_0^{ik} + \gamma^2 c^{-2} v_0^i v_k F_0^k + \frac{\gamma^3}{(\gamma+1)} v_0^i c^{-2} v_j v_k P_0^{jk}$$

$$\left\{ F_0^i + \gamma v_0^i E_0 + v_k P_0^{ik} + c^{-2} v_0^i \gamma \left[ v_k F_0^k + \frac{\gamma}{(\gamma+1)} v_j F_0^j + \frac{\gamma}{(\gamma+1)} v_j v_k P_0^{jk} \right] \right\}$$

$$\frac{\gamma}{\gamma+1} v_k F_0^k + \frac{(\gamma+1)}{(\gamma+1)} v_k F_0^k = \frac{2\gamma+1}{\gamma+1} v_k F_0^k$$

(9.1.11) Hence  $F^i = \gamma \left\{ F_0^i + \gamma v^i E_0 + v_k P_0^{ik} + \frac{\gamma}{c^2(\gamma+1)} \left[ (2\gamma+1) v_k F_0^k + \gamma v_j v_k P_0^{ik} \right] \right\}$

Lorentz transform of  $P^{ij}$

$$P^{ij} = \int I_c dv dw n^i n^j = \int \frac{I_0}{v_0^3} (\gamma_0 dv_0 dw_0) \cdot (v n^i) (v n^j)$$

$$v n^i = \gamma_0 \left\{ n_0^i + (\gamma v^i/c) \left[ 1 + \gamma n_0^k v_k^i / c(\gamma+1) \right] \right\}$$

$$v n^j = \gamma_0 \left\{ n_0^j + \gamma v^j/c \left[ 1 + \gamma n_0^l v_l / c(\gamma+1) \right] \right\}$$

hence

$$P^{ij} = \int I_0 dv_0 dw_0 \left\{ n_0^i + \frac{\gamma v^i}{c} \left[ 1 + \frac{\gamma n_0^k v_k}{c(\gamma+1)} \right] \right\} \left\{ n_0^j + \frac{\gamma v^j}{c} \left[ 1 + \frac{\gamma n_0^l v_l}{c(\gamma+1)} \right] \right\}$$

$$= \int I_0 dv_0 dw_0 \left\{ n_0^i + \frac{\gamma v^i}{c} + \frac{\gamma^2 n_0^k v^i v_k}{c^2(\gamma+1)} \right\} \left\{ n_0^j + \frac{\gamma v^j}{c} + \frac{\gamma^2 n_0^l v^j v_l}{c^2(\gamma+1)} \right\}$$

$$= \int I_0 dv_0 dw_0 \left\{ n_0^i n_0^j + n_0^i \frac{\gamma v^j}{c} + n_0^j \frac{\gamma v^i}{c} + \frac{\gamma^2 n_0^i n_0^l v^j v_l}{c^2(\gamma+1)} + \frac{\gamma^2 v^i v^j}{c^2} \right. \\ \left. + \frac{\gamma^3 n_0^l v^i v^j v_l}{c^3(\gamma+1)} + \frac{\gamma^2 n_0^k n_0^j v^i v_k}{c^2(\gamma+1)} + \frac{\gamma^3 n_0^k v^i v^j v_k}{c^3(\gamma+1)} + \frac{\gamma^4 n_0^k n_0^l v^i v_k v^j v_l}{c^4(\gamma+1)^2} \right\}$$

$$= P_0^{ij} + \gamma c^{-2} v^j F_0^i + \gamma c^{-2} v^i F_0^j + \frac{\gamma^2}{c^2(\gamma+1)} v^j v_l P_0^{il} + \frac{\gamma^2}{c^2} v^i v^j E_0 \\ + \frac{\gamma^3}{c^3(\gamma+1)} v^i v^j v_l F_0^l + \frac{\gamma^2}{c^2(\gamma+1)} v^i v_k P_0^{ik} + \frac{\gamma^3}{c^3(\gamma+1)^2} v^i v^j v_k F_0^k + \frac{\gamma^4}{c^4(\gamma+1)^2} v^i v^j v_k v_l P_0^{kl}$$

$$= P_0^{ij} + \frac{\gamma}{c^2} \left[ v^j F_0^i + v^i F_0^j + \gamma v^i v^j E_0 \right]$$

$$+ \frac{\gamma^2}{c^2(\gamma+1)} \left[ v^j v_l P_0^{il} + \frac{\gamma}{c^2} v^i v^j v_l F_0^l + v^i v_k P_0^{kj} + \frac{\gamma}{c^2} v^i v^j v_k F_0^k + \frac{\gamma^2 v^i v^j v_k v_l}{c^2(\gamma+1)} P_0^{kl} \right]$$

(a11)  $P^{ij} = P_0^{ij} + \gamma c^{-2} \left[ v^i F_0^j + v^j F_0^i + \gamma v^i v^j E_0 \right]$

$$+ \frac{\gamma^2}{c^2(\gamma+1)} \left[ v^j v_k P_0^{ik} + v^i v_k P_0^{kj} + 2\gamma c^{-2} v^i v^j v_k F_0^k \right] + \frac{\gamma^4}{c^4(\gamma+1)^2} v^i v^j v_k v_l P_0^{kl}$$

One dimensional flow:

$$E: \quad E = \gamma^2 [E_0 + 2c^{-1} v_i F_0^i + c^{-2} v_i v_j P_0^{ij}]$$

only one surviving velocity component, hence sums over  $i+j$  become:  $v_i F_0^i = v F_0$   $v_i v_j P_0^{ij} = v^2 P_0$  and  $v^2 c^{-2} P_0 = \beta^2 P_0$

$$(9.13) \quad E = \gamma^2 [E_0 + 2\beta F_0 + \beta^2 P_0]$$

$$F: \quad F^i = \gamma [F_0^i + \gamma v^i E_0 + v_k P_0^{ik} + (\gamma v^i / c^2 (\gamma+1)) [(2\gamma+1) v_k F_0^k + \gamma v_j v_k P_0^{jk}]]$$

$$= \{ \gamma^2 v E_0 + F_0 [\gamma + \gamma^2 \beta^2 (2\gamma+1) / (\gamma+1)] + P_0 v \gamma [1 + \gamma^2 \beta^2 / (\gamma+1)] \}$$

Now  $\beta^2 = (\gamma^2 - 1) / \gamma^2$ , hence  $\gamma^2 \beta^2 / (\gamma+1) = \gamma^2 (\gamma+1)(\gamma-1) / \gamma^2 (\gamma+1) = (\gamma-1)$

Therefore the coeff of  $F_0$  is:

$$\gamma + \gamma^2 \beta^2 (2\gamma+1) / (\gamma+1) = \gamma + (2\gamma+1)(\gamma-1) = \gamma + 2\gamma^2 - \gamma - 1 = 2\gamma^2 - 1 = \frac{2}{1-\beta^2} - 1$$

$$= [2 - (1-\beta^2)] / (1-\beta^2) = (1+\beta^2) / (1-\beta^2) = \gamma^2 (1+\beta^2)$$

and the coeff of  $\gamma P_0 v$ :

$$1 + \gamma^2 \beta^2 / (\gamma+1) = 1 + (\gamma-1) = \gamma$$

hence

$$(9.14) \quad F = \gamma^2 v E_0 + \gamma^2 (1+\beta^2) F_0 + \gamma^2 v P_0$$

$$\boxed{F = \gamma^2 [v E_0 + (1+\beta^2) F_0 + v P_0]}$$

$$P: \quad P^{ij} = P_0^{ij} + \gamma c^{-2} [v^i F_0^j + v^j F_0^i + \gamma v^i v^j E_0]$$

$$+ \frac{\gamma^2}{c^2 (\gamma+1)} [v^j v_k P_0^{ik} + v^i v_k P_0^{kj} + 2\gamma c^{-2} v^i v^j v_k F_0^k] + \left( \frac{\gamma^2}{c^2 (\gamma+1)} \right)^2 v^i v^j v_k v_l P_0^{kl}$$

$$= P_0 + 2\gamma c^{-1} \beta F_0 + \gamma^2 \beta^2 E_0 + \frac{\gamma^2}{(\gamma+1)} [2\beta^2 P_0 + 2\gamma c^{-1} \beta^3 F_0] + \left[ \frac{\gamma^2}{(\gamma+1)} \right]^2 \beta^4 P_0$$

$$= \gamma^2 \beta^2 E_0 + P_0 \left\{ 1 + \frac{2\beta^2 \gamma^2}{(\gamma+1)} + \left[ \frac{\beta^2 \gamma^2}{\gamma+1} \right]^2 \right\} + F_0 \cdot 2\gamma c^{-1} \beta \left\{ 1 + \frac{\gamma^2 \beta^2}{(\gamma+1)} \right\}$$

$$= \gamma^2 \beta^2 E_0 + P_0 \{ 1 + 2(\gamma-1) + (\gamma-1)^2 \} + 2\gamma c^{-1} \beta F_0 \{ 1 + (\gamma-1) \}$$

$$= \gamma^2 \beta^2 E_0 + P_0 \{ 1 + 2\gamma - 2 + \gamma^2 - 2\gamma + 1 \} + 2\gamma c^{-1} \beta F_0$$

$$(9.15) \quad = \gamma^2 \{ P_0 + \beta^2 E_0 + 2v F_0 \}$$

To first order in  $\beta$  this becomes

$$(9.1.16a) \quad E = E_0 + 2\beta \bar{c}' F_0 = E_0 + 2v c^{-2} F_0$$

$$(9.1.17a) \quad F = F_0 + v(E_0 + P_0)$$

$$(9.1.18a) \quad P = P_0 + 2\beta \bar{c}' F_0 = P_0 + 2v c^{-2} F_0$$

Then using  $E_0 = 4\pi \bar{c}' J_0$  ;  $E = 4\pi \bar{c}' J$   
 $F_0 = 4\pi H_0$  ;  $F = 4\pi H$   
 $P_0 = 4\pi \bar{c}' K_0$  ;  $P = 4\pi \bar{c}' K$

we have

$$(9.1.16b) \quad J = J_0 + 2\beta F_0$$

$$(9.1.17b) \quad H = H_0 + \beta(J_0 + K_0)$$

$$(9.1.18b) \quad K = K_0 + 2\beta H_0$$

$$\begin{aligned} G^0 &= \bar{c}' \int dv dw [xI - \eta] \\ &= \bar{c}' \int (v dv dw) [v^{-2}(xI - \eta)] v \\ &= \bar{c}' \int (v_0 dv_0 dw_0) v_0^{-2} (x_0 I_0 - \eta_0) \gamma v_0 (1 + \beta \cdot \underline{n}) \\ &= \bar{c}' \int dv_0 dw_0 (x_0 I_0 - \eta_0) + \gamma \beta \cdot \left[ \bar{c}' \int dv_0 dw_0 [I x - \eta] \underline{n} \right] \end{aligned}$$

$$(9.1.22a) \quad G^0 = G_0^0 + \gamma \beta \cdot G_0$$

$$\begin{aligned} G^1 &= \bar{c}' \int dv dw [xI - \eta] \underline{n} \\ &= \bar{c}' \int (v dv dw) v^{-2} [xI - \eta] (v \underline{n}) \\ &= \bar{c}' \int (v_0 dv_0 dw_0) v_0^{-2} [x_0 I_0 - \eta_0] \gamma v_0 \left[ \underline{n}_0 + \gamma \beta \left( 1 + \frac{\gamma \underline{n}_0 \cdot \beta}{(\gamma + 1)} \right) \right] \\ &= \bar{c}' \int dv_0 dw_0 [x_0 I_0 - \eta_0] \left[ \underline{n}_0 + \gamma \beta + \gamma^2 (\underline{n}_0 \cdot \beta) \beta / (\gamma + 1) \right] \end{aligned}$$

For one-dimensional flow,

$$\begin{aligned} \underline{n}_0 + \gamma \beta + \gamma^2 (\underline{n}_0 \cdot \beta) \beta / (\gamma + 1) &= \underline{n}_0 + \gamma \beta + [\gamma^2 \beta^2 / (\gamma + 1)] \underline{n}_0 \\ &= \underline{n}_0 + (\gamma - 1) \underline{n}_0 + \gamma \beta = \gamma (\beta + \underline{n}_0) \end{aligned}$$

$$\begin{aligned} G^1 &= \bar{c}' \int dv_0 dw_0 [x_0 I_0 - \eta_0] [\gamma \beta + \gamma \underline{n}_0] \\ (9.1.22b) \quad &= \gamma \beta G_0^0 + \gamma G_0^1 \end{aligned}$$

The reverse procedure, with  $v_0 = \gamma v (1 - \underline{n} \cdot \underline{\beta})$   
 and  $v_0 \underline{n}_0 = \gamma [\underline{n} - \gamma \underline{\beta} (1 - \gamma \underline{n} \cdot \underline{\beta} / (\gamma + 1))] ]$   
 yields for 1-D flow:

$$(91.23a) \quad G_0^0 = \gamma (G^0 - \beta G^1)$$

$$(91.23b) \quad G_0^1 = \gamma (G^1 - \beta G^0)$$

### Section 92 : Covariant Form of the Transfer Equation

Generalize the Boltzmann equation

$$\partial f / \partial t + v^i (\partial f / \partial x_i) + \dot{p}^i (\partial f / \partial p_i) = (Df/Dt)_{\text{coll}}$$

to

$$(92.4) \quad \left( \frac{dx^\alpha}{d\lambda} \right) \frac{\partial f}{\partial x^\alpha} + \left( \frac{dp^\alpha}{d\lambda} \right) \left( \frac{\partial f}{\partial p^\alpha} \right) = \left( \frac{Df}{D\lambda} \right)_{\text{coll}} = p^\alpha \left( \frac{\partial f}{\partial x^\alpha} \right) + \dot{p}^\alpha \left( \frac{\partial f}{\partial p^\alpha} \right)$$

$$(92.5) \quad \text{where we define } p^\alpha \equiv (dx^\alpha / d\lambda)$$

$$(92.5) \quad \dot{p}^\alpha \equiv (dp^\alpha / d\lambda)$$

$\lambda$  is used in (92.4) instead of proper time  $\tau$  because photon trajectories lie on null cone.

If  $M^\alpha = p^\alpha$  and  $\epsilon = \text{source}$ ,  $-\alpha f_R = \text{sink}$  then:

$$M^\alpha \frac{\partial f_R}{\partial x^\alpha} + \dot{M}^\alpha \frac{\partial f_R}{\partial M^\alpha} = \epsilon - \alpha f_R \equiv \left( \frac{Df_R}{D\lambda} \right)$$

$$\text{From (63.4): } I = (h^4 v^3 / c^2) f_R \Rightarrow f_R = (I / v^3) (c^2 / h^4) = \int c^2 / h^4$$

$$M^\alpha \frac{c^2}{h^4} \frac{\partial \int}{\partial x^\alpha} + \dot{M}^\alpha \frac{c^2}{h^4} \frac{\partial \int}{\partial M^\alpha} = \epsilon - \alpha \frac{c^2}{h^4} \int$$

or

$$(92.7) \quad M^\alpha \frac{\partial \int}{\partial x^\alpha} + \dot{M}^\alpha \frac{\partial \int}{\partial M^\alpha} = \epsilon \left( \frac{h^4}{c^2} \right) - \alpha \int \equiv \epsilon - \alpha \int$$

In an inertial frame,  $\dot{M}^\alpha = 0$  for photons, and  $v = \text{constant}$ , hence

$$M^\alpha \frac{\partial}{\partial x^\alpha} (I / v^3) = \frac{h v}{c} \frac{n^\alpha}{v^3} \frac{\partial I}{\partial x^\alpha}$$

$$= \frac{h}{c} \frac{1}{v^2} \left[ \frac{\partial I}{\partial t} + \underline{n} \cdot \nabla I \right] = \epsilon - \alpha \frac{I}{v^3}$$

$$\frac{1}{\gamma^2} \left[ \frac{1}{c} \frac{\partial I}{\partial t} + \underline{n} \cdot \nabla I \right] = \frac{e}{h} e - \frac{c}{h} a \frac{1}{v^2}$$

Right-hand-side must scale as  $\gamma^{-2}$  (like lhs), and we identify

$$(e/h) e = \gamma v / v^2$$

$$(c/h) a = \gamma \chi v$$

Note: in § 92  $c=h=1$  units are used, and then  $e = \gamma v / v^2$   $a = \gamma \chi v$   
So now we have:

$$\gamma^{-2} [\eta - \chi I] = \gamma^{-2} \left[ \frac{1}{c} \frac{\partial I}{\partial t} + (\underline{n} \cdot \nabla) I \right] = \frac{e}{h} M^\alpha \downarrow_{\alpha}$$

But  $\downarrow$  = world scalar;  $\downarrow_{\alpha}$  = covariant and  $M^\alpha \downarrow_{\alpha}$  = invariant.

$$\text{hence } \frac{e}{h} M^\alpha \downarrow_{\alpha} = \frac{e}{h} M'^\alpha \downarrow'_{\alpha} = \gamma^{-2} \left[ \frac{1}{c} \frac{\partial I'}{\partial t'} + (\underline{n}' \cdot \nabla') I' \right]$$

and since  $\gamma^{-2} [\eta - \chi I]$  is also invariant:

$$[\eta' - \chi' I'] = \frac{1}{c} \frac{\partial I'}{\partial t'} + (\underline{n}' \cdot \nabla') I'$$

(92.11)

Alternate derivation: boost matrix is: 
$$\begin{pmatrix} \gamma & 0 & 0 & -\beta\gamma \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ -\beta\gamma & 0 & 0 & \gamma \end{pmatrix} = L^{\alpha'}_{\beta}$$

$$(35.39): B'_\alpha = (\partial x^\beta / \partial x'^\alpha) B_\beta = L^{\beta}_{\alpha'} B_\beta$$

$$(92.12) \quad \begin{pmatrix} \frac{1}{c} \frac{\partial}{\partial t} \\ \frac{\partial}{\partial x} \\ \frac{\partial}{\partial y} \\ \frac{\partial}{\partial z} \end{pmatrix} = \begin{pmatrix} \gamma & 0 & 0 & -\beta\gamma \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ -\beta\gamma & 0 & 0 & \gamma \end{pmatrix} \begin{pmatrix} \frac{\partial}{\partial t'} \\ \frac{\partial}{\partial x'} \\ \frac{\partial}{\partial y'} \\ \frac{\partial}{\partial z'} \end{pmatrix} = \begin{pmatrix} \gamma \frac{\partial}{\partial t'} - \beta\gamma \frac{\partial}{\partial z'} \\ \frac{\partial}{\partial x'} \\ \frac{\partial}{\partial y'} \\ \gamma \frac{\partial}{\partial z'} - \beta\gamma \frac{\partial}{\partial t'} \end{pmatrix}$$

Then

$$\frac{1}{c} \frac{\partial}{\partial t} + \underline{n} \cdot \nabla = \frac{1}{c} \frac{\partial}{\partial t} + n_x \frac{\partial}{\partial x} + n_y \frac{\partial}{\partial y} + n_z \frac{\partial}{\partial z}$$

$$= \left( \frac{\gamma}{c} \frac{\partial}{\partial t'} - \beta\gamma \frac{\partial}{\partial z'} \right) + n_x \frac{\partial}{\partial x'} + n_y \frac{\partial}{\partial y'} + n_z \gamma \left( \frac{\partial}{\partial z'} - \beta \frac{\partial}{\partial t'} \right)$$

$$= \left( \frac{\gamma}{c} \frac{\partial}{\partial t'} - \frac{\gamma n_z \beta}{c} \frac{\partial}{\partial t'} \right) + n_x \frac{\partial}{\partial x'} + n_y \frac{\partial}{\partial y'} + \left( \gamma n_z \frac{\partial}{\partial z'} - \beta\gamma \frac{\partial}{\partial z'} \right)$$

$$= \frac{\gamma}{c} (1 - n_z \beta) \frac{\partial}{\partial t'} + n_x \frac{\partial}{\partial x'} + n_y \frac{\partial}{\partial y'} + \gamma (n_z - \beta) \frac{\partial}{\partial z'}$$

From (89.9)  $\gamma(1 - n_z \beta) = \gamma' / v$ ;  $n_x = n'_x \gamma' / v$ ;  $n_y = n'_y \gamma' / v$ ;  $\gamma(n_z - \beta) = n'_z \gamma' / v$

hence

$$\begin{aligned} \frac{1}{c} \frac{\partial}{\partial t} + \underline{n} \cdot \nabla &= \frac{1}{c} \frac{\gamma'}{v} \frac{\partial}{\partial t'} + \frac{\gamma'}{v} n'_x \frac{\partial}{\partial x'} + \frac{\gamma'}{v} n'_y \frac{\partial}{\partial y'} + \frac{\gamma'}{v} n'_z \frac{\partial}{\partial z'} \\ &= \frac{\gamma'}{v} \left[ \frac{1}{c} \frac{\partial}{\partial t'} + \underline{n}' \cdot \nabla' \right] \end{aligned}$$

(92.13)

Now  $I_\nu = (\nu^3/\nu'^3) I_{\nu'}$  ;  $\eta_\nu = (\nu^2/\nu'^2) \eta_{\nu'}$  ;  $\chi_\nu = (\nu'/\nu) \chi_{\nu'}$   
 hence

$$(92.15) \quad \eta_{\nu'} \chi_{\nu'} I_\nu = (\nu^2/\nu'^2) [\eta_{\nu'} - \chi_{\nu'} I_{\nu'}]$$

and  $\left\{ \frac{\nu'}{\nu} \left[ \frac{1}{c} \frac{\partial}{\partial t'} + \underline{n}' \cdot \nabla' \right] \right\} \left\{ (\nu^3/\nu'^3) I_{\nu'} \right\} = (\nu^2/\nu'^2) [\eta_{\nu'} - \chi_{\nu'} I_{\nu'}]$  ;  
 when relative motion is constant  $\frac{\partial}{\partial x^k} [(\nu^3/\nu'^3) I_{\nu'}] = (\nu^3/\nu'^3) \frac{\partial I_{\nu'}}{\partial x^k}$   
 and  $\frac{\nu^2}{\nu'^2} \left\{ \left[ \frac{1}{c} \frac{\partial}{\partial t'} + \underline{n}' \cdot \nabla' \right] I_{\nu'} \right\} = \frac{\nu^2}{\nu'^2} \left\{ \eta_{\nu'} - \chi_{\nu'} I_{\nu'} \right\}$   
 which yields (92.11) by cancelling  $(\nu^2/\nu'^2)$ .

Section 7.2: The Dynamical Equations for a Radiating Fluid

Section 9.3: The Inertial-Frame Transfer Equation for a Moving Fluid

$$\chi(\nu, \underline{n}) = \frac{\gamma_0}{\gamma} \chi_0(\nu_0) = \gamma(1 - \beta \cdot \underline{n}) \chi_0[\gamma\nu(1 - \beta \cdot \underline{n})]$$

To order  $v/c$ ,  $\gamma \rightarrow 1$ . Then  $\chi_0(\nu - \nu \beta \cdot \underline{n}) \approx \chi_0(\nu) - \nu \beta \cdot \underline{n} \frac{\partial \chi_0(\nu)}{\partial \nu}$

and

$$(93.2) \quad \begin{aligned} \chi(\nu, \underline{n}) &\approx (1 - \beta \cdot \underline{n}) \left[ \chi_0(\nu) - \nu \beta \cdot \underline{n} \frac{\partial \chi_0(\nu)}{\partial \nu} \right] \\ &\approx \chi_0(\nu) - \beta \cdot \underline{n} \chi_0(\nu) - \nu \beta \cdot \underline{n} \frac{\partial \chi_0(\nu)}{\partial \nu} \\ \chi(\nu, \underline{n}) &= \chi_0(\nu) - \beta \cdot \underline{n} \left[ \chi_0(\nu) + \nu \frac{\partial \chi_0(\nu)}{\partial \nu} \right] \end{aligned}$$

$$\eta(\nu, \underline{n}) = \frac{\nu^2}{\nu_0^2} \eta_0(\nu_0) \approx [1 + \underline{n} \cdot \underline{\beta}]^2 \left[ \eta_0(\nu) - \nu \underline{n} \cdot \underline{\beta} \frac{\partial \eta_0(\nu)}{\partial \nu} \right]$$

$$(93.3) \quad \begin{aligned} &\approx \eta_0(\nu) + 2 \underline{n} \cdot \underline{\beta} \eta_0(\nu) - \nu \underline{n} \cdot \underline{\beta} \frac{\partial \eta_0(\nu)}{\partial \nu} \\ \eta(\nu, \underline{n}) &= \eta_0(\nu) + \underline{n} \cdot \underline{\beta} [2\eta_0(\nu) - \nu \frac{\partial \eta_0(\nu)}{\partial \nu}] \end{aligned}$$

Then

$$(93.4) \quad \begin{aligned} \left( \frac{1}{c} \frac{\partial}{\partial t} + \underline{n} \cdot \nabla \right) I(\nu, \underline{n}) &= \eta(\nu, \underline{n}) - \chi(\nu, \underline{n}) I(\nu, \underline{n}) \\ &= \eta_0 + \underline{n} \cdot \underline{\beta} [2\eta_0(\nu) - \nu \frac{\partial \eta_0(\nu)}{\partial \nu}] - \left\{ \chi_0 - \beta \cdot \underline{n} (\chi_0 + \nu \frac{\partial \chi_0}{\partial \nu}) \right\} I \\ \left( \frac{1}{c} \frac{\partial}{\partial t} + \underline{n} \cdot \nabla \right) I &= \eta_0 - \chi_0 I + \underline{n} \cdot \underline{\beta} \left\{ 2\eta_0 - \nu \frac{\partial \eta_0}{\partial \nu} + (\chi_0 + \nu \frac{\partial \chi_0}{\partial \nu}) I \right\} \end{aligned}$$

moment equation:

$$\frac{1}{4\pi} \int d\omega \left\{ \frac{1}{c} \frac{\partial \mathbf{I}}{\partial t} + \underline{n} \cdot \nabla \mathbf{I} \right\} = \frac{1}{4\pi} \int d\omega \left\{ \eta_0 - \chi_0 \mathbf{I} + \beta \cdot \underline{n} \left[ 2\eta_0 - \nu \frac{\partial \eta_0}{\partial \nu} + \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] \mathbf{I} \right] \right\}$$

$$= \frac{1}{c} \frac{\partial}{\partial t} \left[ \frac{1}{4\pi} \int \mathbf{I} d\omega \right] + \frac{1}{4\pi} \int \underline{n} \frac{\partial \mathbf{I}}{\partial x} d\omega = \eta_0 \frac{1}{4\pi} \int d\omega - \chi_0 \frac{1}{4\pi} \int \mathbf{I} d\omega$$

$$+ 2\beta \cdot \left[ \frac{1}{4\pi} \int \underline{n} d\omega \right] - \nu \frac{\partial \eta_0}{\partial \nu} \beta \cdot \frac{1}{4\pi} \int \underline{n} d\omega + \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] \beta \cdot \frac{1}{4\pi} \int \underline{n} \mathbf{I} d\omega$$

Now  $\int n^i d\omega = 0$   $\frac{1}{4\pi} \int \mathbf{I} d\omega = \mathbf{J}_v$   $\frac{1}{4\pi} \int n^i \mathbf{I} d\omega = H^i$ , hence

$$\frac{1}{c} \frac{\partial \mathbf{J}_v}{\partial t} + \frac{1}{4\pi} \int n^i \frac{\partial \mathbf{I}}{\partial x^i} d\omega = \eta_0 - \chi_0 \mathbf{J}_v + \frac{2\beta_i}{4\pi} \int n^i d\omega - \nu \frac{\partial \eta_0}{\partial \nu} \frac{\beta_i}{4\pi} \int n^i d\omega$$

$$+ \chi_0 \beta_i H^i + \nu \frac{\partial \chi_0}{\partial \nu} \beta_i H^i$$

To evaluate  $\frac{1}{4\pi} \int n^i \frac{\partial \mathbf{I}}{\partial x^i} d\omega$ , we assume (?)  $\frac{\partial n^i}{\partial x^i} = 0$ , then it becomes

$$\frac{1}{4\pi} \frac{\partial}{\partial x^i} \int n^i \mathbf{I} d\omega = \frac{\partial H^i}{\partial x^i}$$

hence

$$(93.5) \quad \frac{1}{c} \frac{\partial \mathbf{J}_v}{\partial t} + \frac{\partial H^i}{\partial x^i} = \eta_0 - \chi_0 \mathbf{J}_v + \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] \beta_i H^i$$

First Moment Equation:

$$\frac{1}{4\pi} \int \underline{n} d\omega \frac{1}{c} \frac{\partial \mathbf{I}}{\partial t} + \frac{1}{4\pi} \int \underline{n} d\omega (\underline{n} \cdot \nabla \mathbf{I}) = \frac{\eta_0}{4\pi} \int \underline{n} d\omega - \frac{\chi_0}{4\pi} \int \underline{n} \mathbf{I} d\omega + 2\eta_0 \beta \cdot \frac{1}{4\pi} \int \underline{n} \underline{n} d\omega$$

$$- \nu \frac{\partial \eta_0}{\partial \nu} \frac{\beta}{4\pi} \cdot \int \underline{n} \underline{n} d\omega + \chi_0 \frac{\beta}{4\pi} \cdot \int \underline{n} \underline{n} \mathbf{I} d\omega + \nu \frac{\partial \chi_0}{\partial \nu} \frac{\beta}{4\pi} \int \underline{n} \underline{n} \mathbf{I} d\omega$$

or  $\frac{1}{4\pi} \frac{1}{c} \frac{\partial}{\partial t} \int n^i \mathbf{I} d\omega + \frac{1}{4\pi} \int n^i \left( n^j \frac{\partial \mathbf{I}}{\partial x^j} \right) d\omega = \frac{\eta_0}{4\pi} \int n^i d\omega - \frac{\chi_0}{4\pi} \int n^i \mathbf{I} d\omega + \frac{2\eta_0}{4\pi} \beta_j \int n^i n^j d\omega$

$$- \nu \frac{\partial \eta_0}{\partial \nu} \frac{\beta_j}{4\pi} \int n^i n^j d\omega + \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] \frac{\beta_j}{4\pi} \int n^i n^j \mathbf{I} d\omega$$

$$\frac{1}{c} \frac{\partial H^i}{\partial t} + \frac{\partial K_v^{ij}}{\partial x^j} = -\chi_0 H^i + \frac{2\eta_0}{3} \beta_i - \nu \frac{\partial \eta_0}{\partial \nu} \frac{\beta_i}{3} + \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] \beta_j K_v^{ij}$$

$$(93.6) \quad \frac{1}{c} \frac{\partial H^i}{\partial t} + \frac{\partial K_v^{ij}}{\partial x^j} = -\chi_0 H^i + \frac{\beta_i}{3} \left[ 2\eta_0 - \nu \frac{\partial \eta_0}{\partial \nu} \right] + \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] \beta_j K_v^{ij}$$

In  $\int n^i n^j d\omega$ , the integral = 0 when  $i \neq j$ . Pick  $\mu$  and  $\phi$  so that

(93.7)  $n^i = \mu$ . By definition  $dw = \mu d\phi$ . Hence for  $i=j$  the integral is  $\int_0^{2\pi} d\phi \int_{-1}^1 \mu^2 d\mu = 2\pi \int_{-1}^1 \mu^2 d\mu = 2\pi \left[ \frac{\mu^3}{3} \right]_{-1}^1 = 2\pi \cdot \frac{2}{3} = \frac{4\pi}{3}$

To write (93.5) and (93.6) in terms of  $E_\nu$ ,  $F_\nu^i$  and  $P_\nu^{ij}$ , use:

$$J_\nu = \frac{\sigma}{4\pi} E_\nu \quad H_\nu^i = \frac{1}{4\pi} F_\nu^i \quad K_\nu^{ij} = \frac{\sigma}{4\pi} P_\nu^{ij}$$

(93.5) becomes

$$\frac{\partial E_\nu}{\partial t} + \frac{\partial F_\nu^i}{\partial x^i} = 4\pi\eta_0 - c\chi_0 E_\nu + \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] \beta_i F_\nu^i$$

or

(93.5a) 
$$\frac{\partial E_\nu}{\partial t} + \frac{\partial F_\nu^i}{\partial x^i} = 4\pi \left[ \eta_0 - \chi_0 J_\nu \right] + \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] \beta_i F_\nu^i$$

and (93.6) becomes:

(93.5b) 
$$\frac{1}{c} \frac{\partial F_\nu^i}{\partial t} + c \frac{\partial P_\nu^{ij}}{\partial x^j} = -\chi_0 F_\nu^i + \frac{4\pi\beta_i}{3} \left[ 2\eta_0 - \nu \frac{\partial \eta_0}{\partial \nu} \right] + \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] \nu_j P_\nu^{ij}$$

note:  $2\eta_0 - \nu \frac{\partial \eta_0}{\partial \nu} = 3\eta_0 - \partial(\nu\eta_0)/\partial \nu$

Integrating over frequency, (93.5a) becomes the energy equation:

(93.8) 
$$\frac{\partial E}{\partial t} + \frac{\partial F^i}{\partial x^i} = 4\pi \int (\eta_0 - \chi_0 J_\nu) d\nu + \beta_i \int \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] F_\nu^i d\nu = cG^0$$

and (93.6a) becomes the momentum equation:

(93.9) 
$$\frac{1}{c^2} \frac{\partial F^i}{\partial t} + \frac{\partial P^{ij}}{\partial x^j} = -\frac{1}{c} \int \chi_0 F_\nu^i d\nu + \frac{4\pi\nu_j}{3c^2} \int \left[ 2\eta_0 - \nu \frac{\partial \eta_0}{\partial \nu} \right] d\nu + \frac{\nu_j}{c} \int \left[ \chi_0 + \nu \frac{\partial \chi_0}{\partial \nu} \right] P_\nu^{ij} d\nu = -G^i$$

where  $\int \left[ 2\eta_0 - \nu \frac{\partial \eta_0}{\partial \nu} \right] d\nu = \int 3\eta_0 d\nu - \int \partial(\nu\eta_0)/\partial \nu d\nu = 3\int \eta_0 d\nu - 0$

For grey material,  $\chi_0$  is not a fn. of  $\nu$  and  $\eta_0(\nu)/\chi_0(\nu) = B_\nu$ , the Planck function

(93.8) becomes

$$\frac{\partial E}{\partial t} + \frac{\partial F^i}{\partial x^i} = 4\pi\chi_0 \int (B_\nu - J_\nu) d\nu + \chi_0 \beta_i \int F_\nu^i d\nu ;$$

using  $\kappa$  for  $\chi_0$  and integrating:

$$\frac{\partial E}{\partial t} + \frac{\partial F^i}{\partial x^i} = 4\pi\kappa (B - cE/4\pi) + \kappa \beta_i F^i$$

(93.10) 
$$E_{,t} + F^i_{,i} = \kappa (4\pi B - cE) + \kappa \beta_i F^i$$

$$(93.9) \quad c^2 F_{,t}^i + P_{,j}^{ij} = -c^i \int \chi_0 F_{,j}^i dV + 4\pi v^i c^2 \int \eta_0 dV + v^j c^i \int [\chi_0 + v \frac{\partial \chi_0}{\partial v}] P_{,j}^{ij} dV$$

for grey material:

$$(93.11) \quad c^2 F_{,t}^i + P_{,j}^{ij} = -c^i \chi F^i + 4\pi v^i c^2 \chi B + v^j c^i \chi P_{,j}^{ij}$$

$$(91.16a): \quad E \approx E_0 + 2v c^2 F_0$$

if  $E_0 \approx 4\pi B/c$  (diffusion regime) then

$$E = 4\pi B/c + 2v c^2 F_0$$

$$\text{or } 4\pi B - cE = -2\beta^c E_0$$

$$\text{and } E_{,t} + F_{,i}^i = \chi(4\pi B - cE) + \chi\beta^c E \\ = \chi\beta^c (E - 2E_0)$$

$$\text{From (91.17a), } F = F_0 + v(E_0 + P_0)$$

thus:

$$E_{,t} + F_{,i}^i = \chi\beta^c [F_0 + v(E_0 + P_0) - 2E_0] \\ = \chi\beta^c [-E_0 + v(E_0 + P_0)]$$

$$(93.12) \quad E_{,t} + F_{,i}^i \approx \chi\beta^c (-E_0) \text{ in the static diffusion regime.}$$

Order of magnitude estimate of  $(\chi v \cdot E / c) / \nabla \cdot E$ :

$$\chi \sim 1/\lambda_p; \quad \nabla \cdot E \sim E/l, \text{ hence}$$

$$(\chi v \cdot E / c) / \nabla \cdot E \approx (vF/c\lambda_p)(F/l) \sim lv/c\lambda_p$$

Order of magnitude estimate of  $(c^2 F_{,t}^i) / (\chi F^i / c)$

$$\approx (c^2 F / t_f) / (\lambda_p^{-1} F / c)$$

and  $l/t_f \sim v$ , hence  $t_f^{-1} \sim vl^{-1}$  and

$$\text{ratio} \approx (v/c)(\lambda_p) = v\lambda_p/c$$

Thus (93.11) becomes

$$P_{,j}^{ij} \approx -\chi c^i F^i + \chi v^i c^i (4\pi B/c) + \chi c^i v_j P_{,j}^{ij}$$

$$\chi c^i F^i = \chi v^i c^2 4\pi B + \chi c^i v_j P_{,j}^{ij} - P_{,j}^{ij}$$

(93.13)

$$F^i = 4\pi v^i c^i B - (c/\chi) P_{,j}^{ij} + v_j P_{,j}^{ij}$$

$$\eta - \chi I \rightarrow \eta - \chi S = \chi \left( \frac{\eta}{\chi} - S \right) \quad \text{Diffusion limit } \eta/\chi = B, \text{ hence}$$

$$\eta - \chi S = \chi(B - S) = (\chi/4\pi)(4\pi B - cE) \quad \text{as } S = cE/4\pi$$

Assume (show in §97) that diffusion limit gives:  $E_0 \approx 4\pi B/c$ ;  
 $P_0^{ij} = P_0^{ij} + O(\lambda_p v/c) = \frac{1}{3} E_0 \delta^{ij} + O(\lambda_p v/c)$ ;  $F_0^i = -c \chi^{-1} \nabla \cdot (P_0^i)$

then

$$F^i = v^i E_0 + v_j [P_0^{ij} + O(\lambda_p v/c)] - (c/\chi) (P_0^{ij} + O(\lambda_p v/c))_{,j}$$

$$(93.14) \quad F^i \approx v^i E_0 + v_j P_0^{ij} - F_0^i \approx F_0^i + \frac{4}{3} E_0 v^i$$

Streaming limit:  $l/\lambda_p \leq 1$  ;  $E \approx P$  ;  $F \approx cE$

Diffusion limit:  $E \approx 3P$

Static diffusion:  $t_f \gg t_d$  ( $v/c \ll \lambda_p/l$ ) ;  $(F/cE) = O(\lambda_p/l)$

Dynamic diffusion:  $t_f \lesssim t_d$  ( $v/c \gtrsim \lambda_p/l$ ) ;  $F \sim (cE)(v/c) \approx (vE)$

Equation (91.17a):  $F \approx F_0 + v(E_0 + P_0)$

Dynamic diffusion  $v(E_0 + P_0) \gg F_0$  ;  $E_0 \approx 3P_0$

$$F \approx v \cdot \frac{4}{3} E_0 \quad \text{and } (F/cE) \sim O(v/c)$$

For estimate of  $S = \chi [4\pi B - cE]$  80.20:

$$c^{-1} \partial E / \partial t = \frac{1}{3} \nabla \cdot (\chi^{-1} \nabla E) + (4\pi/c) \eta - \chi E$$

$$\text{or } c^{-1} \partial E / \partial t = \frac{1}{3} \nabla \cdot (\chi^{-1} \nabla E) + c^{-1} \chi [4\pi B - cE]$$

$$\text{Scaling: } c^{-1} E / t_f \quad \frac{1}{3} \frac{1}{l} \lambda_p \frac{E}{l} \quad - c^{-1} S$$

$$c^{-1} E v / l \quad \frac{1}{3} E \lambda_p / l^2 \quad c^{-1} S$$

for dynamic diffusion, where time derivative dominates over  $\nabla^2$  term

$$c^{-1} S \sim c^{-1} E v / l \Rightarrow S \sim E (v/l)$$

for static diffusion where  $\partial/\partial t$  term is ignored:

$$c^{-1} S \sim \frac{1}{3} E \lambda_p / l^2 \Rightarrow S \sim E (\lambda_p c / l^2)$$

Streaming limit

Transfer equation (93.4): on a fluid-flow timescale  $t_f = l/v$

$$(a) \quad c^{-1} \frac{\partial I}{\partial t} + \underline{u} \cdot \nabla I = \eta_0 - \chi_0 I + \left( \frac{\eta v}{c} \right) \left\{ 2\eta_0 - v \frac{\partial \eta_0}{\partial v} + [\chi_0 + v \frac{\partial \chi_0}{\partial v}] I \right\}$$

$$\frac{I}{c t_f} \quad \frac{I}{l} \quad \frac{I}{\lambda_p} \quad \frac{I}{\lambda_p} \quad \frac{v}{c} \frac{I}{\lambda_p}$$

multiply them by  $l/I$

(a)  $\frac{l}{ct_f} = \frac{lv}{cl} = \frac{v}{c} \left( 1 ; \frac{l}{\lambda_p} ; \frac{l}{\lambda_p} ; \frac{v}{c} \frac{l}{\lambda_p} \right)$

on a radiation-flow timescale  $t_R$ ,

(b)  $\frac{1}{c} \frac{\partial I}{\partial t} = \frac{1}{c} \frac{1}{t_R} = \frac{1}{c} \frac{c}{l} = \frac{1}{l}$  and  $\frac{l}{I} \cdot \left( \frac{l}{I} \right) = 1$

Transfer equation: diffusion limit

$$c^{-1} \frac{\partial I}{\partial t} + \underline{n} \cdot \nabla I = \chi_0 [n_0/\chi_0 - I] + \underline{n} \cdot \underline{\beta} \left[ 2n_0 - v \frac{\partial n_0}{\partial \omega} + (\chi_0 + v \frac{\partial \chi_0}{\partial \omega}) I \right]$$

$$\sim \lambda_0 \left[ n_0/\chi_0 - \frac{c}{4\pi} E \right]$$

$$\left( \frac{I}{ct_f} \right) \left( \frac{I}{l} \right) \quad \frac{1}{4\pi\lambda_p} \left[ \sim 4\pi B - cE \right] \quad \frac{v}{c} \frac{l}{\lambda_p} \left[ 0(4+B-cE) \right]$$

Static diffusion:

$$\left( \frac{I}{l} \right) \left( \frac{v}{c} \right) \quad \left( \frac{I}{l} \right) \quad E \left( \frac{c\lambda_p}{l} \right) \quad \left( \frac{v}{c} \right) \left( \frac{E\lambda_p}{l} \right) \left( \frac{c}{4\pi} \right) \left( \frac{l}{\lambda_p} \right)$$

$$I/l \left\{ \frac{v}{c} \quad 1 \quad \frac{E}{I} \left( \frac{c\lambda_p}{l} \right) \quad \left( \frac{v\lambda_p}{c} \right) \left( \frac{E}{I} \right) \left( \frac{l}{\lambda_p} \right) \right\}$$

But  $E/I \sim 4\pi/c$  hence term order is

(c)  $\frac{v}{c} \quad 1 \quad (\lambda_p/l) \quad (v/c) (\lambda_p/l) + (v/c) (l/\lambda)$

Dynamic diffusion:

$$\left( \frac{I}{l} \right) \left( \frac{v}{c} \right) \quad \left( \frac{I}{l} \right) \quad E \left( \frac{v}{l} \right) \quad E \left( \frac{v}{c} \right) \left( \frac{v}{l} \right); \left( \frac{v}{c} \right) I/\lambda_p$$

$$E \sim (4\pi/c) I \Rightarrow$$

$$\left( \frac{I}{l} \right) \left( \frac{v}{c} \right) \quad \left( \frac{I}{l} \right) \quad \left( \frac{I}{c} \right) \left( \frac{v}{c} \right) \quad \left( \frac{I}{c} \right) \left( \frac{v}{c} \right) \left( \frac{v}{c} \right); \left( \frac{v}{c} \right) \left( \frac{I}{l} \right) \left( \frac{l}{\lambda_p} \right)$$

(d) or  $v/c \quad 1 \quad v/c \quad v^2/c^2; (v/c) (l/\lambda_p)$

Radiative momentum equation (93.)

$$c^2 F_{,t}^i + P_{,j}^{ij} = -c^{-1} \int \chi_0 F^i dv + 4\pi c^2 v^i \int n_0 dv + c^{-1} v_j \int (\chi_0 + v \partial \chi_0 / \partial v) P^{ij} dv$$

(a) Streaming limit; fluid-flow timescale

$$c^2 F/t_f \quad P/l \quad c^{-1} F/\lambda_p \quad c^{-2} v \lambda_p^{-1} I \quad c^{-1} v \lambda_p^{-1} P$$

now  $F \approx cE$ ,  $E \approx P$ ,  $t_f^{-1} \sim v/l$

$$c^2 (cE) v/l \quad E/l \quad c^{-1} (cE)/\lambda_p \quad c^{-2} v \lambda_p^{-1} (cE) \quad c^{-1} v \lambda_p^{-1} E$$

$$(a) (E/e) \left\{ \begin{array}{ccccc} \nu/c & 1 & l/\lambda_p & (\nu/c)(l/\lambda_p) & (\nu/c)(l/\lambda_p) \end{array} \right\}$$

(b) Radiation time scale (streaming)  $c^{-1} \partial/\partial t \rightarrow c^{-1} t_e^{-1} \approx l^{-1}$  and time-der term is  $O(1)$

$$\left\{ \begin{array}{ccccc} 1 & 1 & l/\lambda_p & (\nu/c)(l/\lambda_p) & (\nu/c)(l/\lambda_p) \end{array} \right\}$$

(c) Static diffusion:

$$\begin{array}{ccccc} c^{-2} F/t_f & P/l & c^{-1} F/\lambda_p & c^{-2} \nu I/\lambda_p & c^{-1} \nu \lambda_p^{-1} P \\ c^{-2} F(\nu/e) & E/e & c^{-1} F/\lambda_p & c^{-2} \nu \lambda_p^{-1} (cE) & c^{-1} \nu \lambda_p^{-1} E \\ F \sim cE \lambda_p/l & & & & \\ c^2 (cE \lambda_p \nu/c^2) & E/e & c^{-1} (cE \lambda_p/e \lambda_p) & c^{-1} \nu \lambda_p^{-1} E & c^{-1} \nu \lambda_p^{-1} E \\ E(c^{-1} \lambda_p \nu/c^2) & E/e & (E/e) & (\nu/c) E/\lambda_p & (\nu/c) (E/\lambda_p) \\ (E/e) \left\{ \begin{array}{ccccc} (\nu/c)(\lambda_p/l) & 1 & 1 & (\nu/c)(l/\lambda_p) & (\nu/c)(l/\lambda_p) \end{array} \right\} \end{array}$$

(d) Dynamic diffusion:  $F \sim cE(\nu/c)$

$$\begin{array}{ccccc} c^{-2} (cE \nu/c)(\nu/e) & (E/e) & c^{-1} \lambda_p^{-1} (\nu E) & c^{-2} \nu c E/\lambda_p & c^{-1} \nu \lambda_p^{-1} E \\ (E/e)(\nu^2/c^2) & (E/e) & (E/e)(\nu/c)(l/\lambda_p) & (E/e)(\nu/c)(l/\lambda_p) & (E/e)(\nu/c)(l/\lambda_p) \\ \nu^2/c^2 & 1 & (\nu/c)(l/\lambda_p) & (\nu/c)(l/\lambda_p) & (\nu/c)(l/\lambda_p) \end{array}$$

Radiative Energy Equation (93.8)

$$E_{,t} + F_{,x}^i = 4\pi \int \eta_0 d\nu - 4\pi \int \chi_0 J d\nu + (\nu/c) \int [\chi_0 + \nu \partial \chi_0 / \partial \nu] F d\nu$$

$$(a) E/t_f \quad F/l \quad J/\lambda_p \quad J/\lambda_p \quad (\nu/c) F/\lambda_p$$

in streaming limit  $cE \approx F$ ; also  $J \sim cE$

Fluid-flow timescale

$$\begin{array}{ccccc} E(\nu/c) & cE/l & cE/\lambda_p & cE/\lambda_p & (\nu/c)(cE/\lambda_p) \\ cE/l \left\{ \begin{array}{ccccc} \nu/c & 1 & l/\lambda_p & l/\lambda_p & (\nu/c)(l/\lambda_p) \end{array} \right\} \end{array}$$

on radiation timescale, streaming limit:

$$\left\{ \begin{array}{ccccc} 1 & 1 & l/\lambda_p & l/\lambda_p & (\nu/c)(l/\lambda_p) \end{array} \right\}$$

(b) Static Diffusion

$$E_{,t} + F^i_{,i} = 4\pi \int (\eta_0 - \lambda_0 J) d\nu + (v/c) \int [\lambda_0 + v \partial \lambda_0 / \partial \nu] F d\nu$$

$E/t_f$	$F/e$	$E(\lambda_p c / l^2)$	$(v/c) \lambda_p^{-1} F$
$E v / e$	$(c E \lambda_p / l^2)$	$E(\lambda_p c / l^2)$	$(v/c) \lambda_p^{-1} (c E \lambda_p / l^2)$
$(c E / e) (\lambda_p / l^2)$	$(v/c) (c \lambda_p)$	$1$	$(v/c) (l / \lambda_p)$

(c) Dynamic Diffusion

$E v / e$	$l^{-1} (E v)$	$E (v / e)$	$(v/c) \lambda_p^{-1} (v E)$
$(E v / e) \{$	$1$	$1$	$(v/c) l / \lambda_p \}$

## §94 Inertial-Frame Equations of Radiation Hydrodynamics

(91.8)  $R = (\mathcal{R}) = \begin{pmatrix} E & c^1 F & 0 & 0 \\ c^1 F & P & 0 & 0 \\ 0 & 0 & \frac{1}{2}(E-P) & 0 \\ 0 & 0 & 0 & \frac{1}{2}(E-P) \end{pmatrix}$  physical components  
 rewritten with  $r$  the 1st spatial coord.  $(t, r, \theta, \phi)$

(91.9)  $R^{\alpha\beta} = \begin{pmatrix} E & c^1 F & 0 & 0 \\ c^1 F & P & 0 & 0 \\ 0 & 0 & \frac{1}{2}(E-P)/r^2 & 0 \\ 0 & 0 & 0 & \frac{1}{2}(E-P)/r^2 \sin^2 \theta \end{pmatrix}$  contravariant components  
 in  $(t, r, \theta, \phi)$   
 rewritten in  $E, F, P$

Use (A3.91) on (91.8) with  $\partial/\partial\theta = \partial/\partial\phi = 0$

$$\begin{aligned} R^{1j}_{;j} &= r^{-2} \partial(r^2 R_{11})/\partial r - r^{-1} (R_{22} + R_{33}) \\ &= r^{-2} \partial(r^2 P)/\partial r - r^{-1} [\frac{1}{2}(E-P) + \frac{1}{2}(E-P)] \\ &= \partial P/\partial r + 2rP - r^{-1}(E-P) \end{aligned}$$

$$R^{1j}_{;j} = \partial P/\partial r + r^{-1} [2P - E + P] = \partial P/\partial r + r^{-1} [3P - E]$$

$$\begin{aligned} -G^1 &= R^{10}_{;0} + R^{1\beta}_{;\beta} \\ &= c^1 \frac{\partial}{\partial t} (c^1 F) + \partial P/\partial r + [3P - E]/r \end{aligned}$$

(94.5)  $-G^1 = c^2 \partial F/\partial t + \partial P/\partial r + (3P - E)/r$

$$\begin{aligned} -G^0 &= R^{00}_{;t} + R^{0j}_{;j} = c^1 \frac{\partial}{\partial t} (E) + R^{01}_{;1} \\ &= c^1 \partial E/\partial t + r^{-2} \partial(r^2 c^1 F)/\partial r \end{aligned}$$

(94.4) or  $-cG^0 = \partial E/\partial t + r^{-2} \partial(r^2 F)/\partial r$

To write (94.6)  $M^{\alpha\beta}_{;\beta} = F^\alpha + G^\alpha$  and (94.8)  $(M^{\alpha\beta} + R^{\alpha A})_{;\beta} = F^\alpha$  in cartesian coordinates, we need  $M^{\alpha\beta}_{;\beta}$  from §42

$$(\rho_i - P/c^2)_{;t} + (\rho_i v^j)_{;j} = v_j f^j/c^2 \quad (42.3)$$

$$(\rho_i v^i)_{;t} + (\rho_i v^i v^j + p \delta^{ij})_{;j} = f^i \quad (42.4)$$

Then (94.6) becomes:

$$(94.9a) \quad \begin{aligned} \bar{c}^i m^{0\beta}_{;\beta} &= (\rho_i - p/c^2)_{,t} + (\rho_i v^j)_{,j} = v_j f^j / c^2 + c^{-1} G^0 \\ \Rightarrow (\rho_i c^2 - p)_{,t} + (\rho_i c^2 v^j)_{,j} &= v_j f^j + c G^0 \end{aligned}$$

and

$$(94.10a) \quad \begin{aligned} m^{i\beta}_{;\beta} &= (m^{i0})_{,0} + (m^{ij})_{,j} \\ &= c^i (c \rho v^i)_{,t} + (p v^i v^j + p \delta^{ij})_{,j} = f^i + G^i \\ m^{i\beta}_{;\beta} &= (p v^i)_{,t} + (p v^i v^j + p \delta^{ij})_{,j} = f^i + G^i \\ \text{or } (p v^i)_{,t} + (p v^i v^j)_{,j} &= f^i - p_{,i} + G^i \end{aligned}$$

And (94.8) becomes:

$$(94.9a) \quad \begin{aligned} c m^{0\beta}_{;\beta} + c R^{0\beta}_{;\beta} &= (\rho_i c^2 - p)_{,t} + (c^2 \rho_i v^j)_{,j} + E_{,t} + F^i_{,j} \\ \Rightarrow c(m^{0\beta} + R^{0\beta})_{;\beta} &= (\rho_i c^2 - p + E)_{,t} + (c^2 \rho_i v^j + F^j)_{,j} = v_j f^j \end{aligned}$$

and

$$(94.10b) \quad \begin{aligned} (m^{i\beta} + R^{i\beta})_{;\beta} &= c^i (p_i c v^i)_{,t} + (p_i v^i v^j + p \delta^{ij})_{,j} + c^i (c^i F^i)_{,t} + P^{ij}_{,j} \\ &= (p_i c^i)_{,t} + (p_i v^i v^j + p \delta^{ij})_{,j} + c^2 F^i_{,t} + P^{ij}_{,j} = f^i \\ \text{or} \\ (m^{i\beta} + R^{i\beta})_{;\beta} &= (p_i v^i + c^2 F^i)_{,t} + (p_i v^i v^j + P^{ij})_{,j} = f^i - p_{,i} \end{aligned}$$

Subtract  $c^2 \times$  continuity equation  $(\delta \rho_0)_{,t} + (\delta \rho v^j)_{,j} = 0$  from 94.9a and 94.9b:

First write both in terms of  $p$  and  $e$ :  $\rho_i = \gamma^2 \rho_0 (1 + h/c^2)$ .

$$(94.9a) \text{ becomes: } \begin{aligned} \rho_i &\equiv \gamma^2 \rho_{000} \equiv \gamma^2 \rho_0 (1 + h/c^2) \\ \delta \rho_0 &\equiv p \\ h &= e + \delta p / \rho \end{aligned} \quad \begin{aligned} &= \delta p (1 + e/c^2 + \delta p / \rho c^2) \\ &[\delta \rho c^2 + \delta p h - p]_{,t} + [\delta \rho c^2 v^j + \delta p h v^j]_{,j} = v_j f^j + c G^0 \\ \Rightarrow &[\delta \rho c^2 + \delta p (e + \delta p / \rho) - p]_{,t} + [\delta \rho c^2 v^j + \delta p (e + \delta p / \rho) v^j]_{,j} = v_j f^j + c G^0 \\ \Rightarrow &[\delta \rho c^2 + \delta p e + (\delta^2 - 1) p]_{,t} + [\delta \rho c^2 v^j + \delta p e v^j + \delta^2 p v^j]_{,j} = v_j f^j + c G^0 \\ &\quad - (c^2 \rho)_{,t} \quad - (c^2 \rho v^j)_{,j} = 0 \end{aligned}$$

---

$$(94.11a) \quad [(\delta - 1) p c^2 + \delta p e + (\delta^2 - 1) p]_{,t} + \{[(\delta - 1) p c^2 + \delta p e + \delta^2 p] v^j\}_{,j} = v_j f^j + c G^0$$

(94.9b) becomes:

$$\frac{[\gamma \rho c^2 (1 + v/c^2 + \gamma p/\rho c^2) - p + E]_{,t} + [\gamma \rho c^2 v^j (1 + v/c^2 + \gamma p/\rho c^2) + F^j]_{,j} - (c^2 \rho)_{,t} - (c^2 \rho v^j)_{,j}}{= 0} = v_j f^j$$

(94.11b)  $[(\gamma-1)\rho c^2 + \gamma p + (\gamma^2-1)p]_{,t} + \{(\gamma-1)\rho c^2 + \gamma p + \gamma^2 p\} v^j_{,j} + F^j_{,j} = v_j f^j$

Momentum Eqs (94.10)

$$\begin{aligned} (\gamma^2 \rho_{000} v^i)_{,t} + (\gamma^2 \rho_{000} v^i v^j)_{,j} &= f_i - p_{,i} + G_i \\ v^i/c^2 (\gamma^2 \rho_{000} c^2 - p)_{,t} + v^i/c^2 (\gamma^2 \rho_{000} c^2 v^j)_{,j} &= (v^i/c^2) v_j f^j + (v^i/c^2) e G^0 \end{aligned}$$

$$\begin{aligned} &[\gamma^2 \rho_{000} v^i]_{,t} - v^i (\gamma^2 \rho_{000} - p/c^2)_{,t} + (\gamma^2 \rho_{000} v^i v^j)_{,j} - v^i (\gamma^2 \rho_{000} v^j)_{,j} \\ &= f_i - (v^i v_j / c^2) f^j - p_{,i} + G_i - (v^i/c) G^0 \\ = &v^i (\cancel{\gamma^2 \rho_{000}})_{,t} + \gamma^2 \rho_{000} v^i_{,t} + v^i (p/c^2)_{,t} + v^i (\cancel{\gamma^2 \rho_{000} v^j})_{,j} + \gamma^2 \rho_{000} v^j v^i_{,j} - v^i (\cancel{\gamma^2 \rho_{000} v^j})_{,j} \\ &- v^i (\cancel{\gamma^2 \rho_{000}})_{,t} = f_i - f_j v^i v^j / c^2 - p_{,i} + G_i - (v^i/c) G^0 \end{aligned}$$

=>

$$\begin{aligned} \gamma^2 \rho_{000} v^i_{,t} + (v^i/c^2) p_{,t} + \gamma^2 \rho_{000} v^j v^i_{,j} &= f_i - f_j v^i v^j / c^2 - p_{,i} + G_i - (v^i/c) G^0 \\ \gamma^2 \rho_{000} [v^i_{,t} + v^j v^i_{,j}] &= f_i - f_j v^i v^j / c^2 - p_{,i} - (v^i/c^2) p_{,t} + G_i - (v^i/c) G^0 \end{aligned}$$

(94.12a)  $\Rightarrow \rho_i [Dv^i/Dt] = \underline{f} - \underline{\nabla} p - (\underline{v}/c^2) (\underline{v} \cdot \underline{f} + \partial p / \partial t) + \underline{G} - \underline{v} c^i G^0$

$$\begin{aligned} (p_i v^i + c^2 F^i)_{,t} + (p_i v^i v^j + P^{ij})_{,j} &= f^i - p_{,i} \\ (v^i/c^2) (p_i c^2 - p + E)_{,t} + (v^i/c^2) (p_i c^2 v^j + F^i)_{,j} &= v_j f^j (v^i/c^2) \end{aligned}$$

$$\begin{aligned} p_i v^i_{,t} + \cancel{v^i p_{,i}} + c^2 F^i_{,t} - \cancel{v^i p_{,i}}_{,t} + (p v^i/c^2 - E v^i/c^2)_{,t} \\ + p_i v^j v^i_{,j} + v^i (\cancel{p_{,i}})_{,j} - v^i (\cancel{p_{,i}})_{,j} + p_{i,j} c^2 v^i F^j_{,j} &= f^i - p_{,i} - v^i v_j f^j / c^2 \\ p_i v^i_{,t} + p_i v^j v^i_{,j} + \frac{F^i_{,t} + p v^i c^{-2} - E v^i c^{-2}}{,t} + (p_{i,j} c^2 v^i F^j)_{,j} &= f^i - p_{,i} - v^i v_j f^j / c^2 \end{aligned}$$

(94.12b)  $\rho_i (Dv^i/Dt) + c^2 [\underline{L} \cdot \underline{E}]_{,t} + (\underline{P}' - \underline{E}) \underline{v} ] + [\underline{\nabla} \cdot \underline{P} - \underline{v} (\underline{\nabla} \cdot \underline{E}) c^2] = \underline{f} - \underline{\nabla} p - \underline{v} (\underline{v} \cdot \underline{f})$

$$\text{or } \rho, (D_{\underline{v}}/Dt) = \underline{f} - \underline{\nabla} p - \underline{v} c^2 [p, t + \underline{v} \cdot \underline{f}] - (\underline{\nabla} \cdot \underline{P} + c^2 \underline{E}, t) + \underline{v} c^2 (E, t + \underline{\nabla} \cdot \underline{E})$$

Writing  $dt = \gamma d\tau$  and  $\rho_x = \gamma^{-1} \rho$ , or  $\rho = \gamma \rho_x$ , we have

$$(94.12a) \quad \rho_x (D_{\underline{v}}/D\tau) = \underline{f} - \underline{\nabla} p - c^2 \underline{v} (p, t + \underline{f} \cdot \underline{v}) + \underline{G} - c^2 \underline{v} G^0$$

and

$$(94.12b) \quad \rho_x (D_{\underline{v}}/D\tau) = \underline{f} - \underline{\nabla} p - \underline{v} c^2 [\partial p / \partial t + \underline{v} \cdot \underline{f}] - (\underline{\nabla} \cdot \underline{P} + c^2 \partial \underline{E} / \partial t + \underline{v} c^2 (\partial E / \partial t + \underline{\nabla} \cdot \underline{E}))$$

Dropping terms of higher order than  $(v/c)$ :

$$(94.13a) \quad \rho (D_{\underline{v}}/Dt) = \underline{f} - \underline{\nabla} p + \underline{G} - v c^2 G^0$$

$$(94.13b) \quad \rho (D_{\underline{v}}/Dt) = \underline{f} - \underline{\nabla} p - (\underline{\nabla} \cdot \underline{P} + c^2 \partial \underline{E} / \partial t) + v c^2 (\partial E / \partial t + \underline{\nabla} \cdot \underline{E})$$

### The Total Energy Equation

Take (94.11) and let  $\gamma \rightarrow 1$ ,  $(\gamma - 1) \rightarrow \frac{1}{2} v^2 / c^2$ , then

$$(94.15a) \quad [p v^2 / 2 + p e + p v^2 c^2], t + \{ [p v^2 / 2 + p e + p] v^i \}, i = v_i f^i + c G^0$$

$$(94.15b) \quad [p v^2 / 2 + p e + E], t + \{ [p v^2 / 2 + p e + p] v^i + F^i \}, i = v_i f^i$$

$$\begin{aligned} [p(e + v^2/2)], t + \{ [p(e + v^2/2) + p] v^i \}, t &= (e + v^2/2) \partial p / \partial t + p (e + v^2/2), t \\ &+ (p v^i), i + (e + v^2/2), i p v^i + (e + v^2/2) (p v^i), i \\ &= (e + v^2/2) [\partial p / \partial t + \underline{\nabla} \cdot (\underline{p} \underline{v})] + p \partial (e + v^2/2) / \partial t + p \underline{v} \cdot \underline{\nabla} (e + v^2/2) + (p v^i), i \\ &\quad \text{"0" by continuity eqn.} \end{aligned}$$

$$(94.16a) \text{ hence } \rho D(e + v^2/2) / Dt + \underline{\nabla} \cdot (p \underline{v}) = \underline{v} \cdot \underline{f} + c G^0$$

Similarly,

$$[\rho(c + v^2/2) + E]_{,t} + \{[\rho(c + v^2/2) + p]v^i + F^i\}_{,i} = v_i f^i$$

becomes

$$(94.16b) \quad \rho D(c + v^2/2)/Dt + \nabla \cdot (p \underline{v}) + \partial E / \partial t + \nabla \cdot \underline{F} = \underline{v} \cdot \underline{f}$$

### Mechanical Energy Equation

$$\underline{v} \cdot \{ \rho(D\underline{v}/Dt) = \underline{f} - \nabla p + \underline{G} - \underline{v}c'G^0 \}$$

$$\rho \underline{v} \cdot \partial \underline{v} / \partial t + \rho \underline{v} \cdot (\underline{v} \cdot \nabla) \underline{v} = \underline{v} \cdot \underline{f} - \underline{v} \cdot \nabla p + \underline{v} \cdot \underline{G} - v^2 c' G^0$$

$$\rho D(v^2/2)/Dt = -\underline{v} \cdot \nabla p + \underline{v} \cdot (\underline{f} + \underline{G})$$

$$\underline{v} \cdot \rho D\underline{v}/Dt = \underline{v} \cdot \underline{f} - \underline{v} \cdot \nabla p - c^2 \underline{v} \cdot \partial E / \partial t - \underline{v} \cdot \nabla \cdot \underline{P}$$

$$+ c^2 v^2 (\partial E / \partial t + \nabla \cdot \underline{F})$$

$$\Rightarrow \rho D(v^2/2)/Dt = -\underline{v} \cdot \nabla p - \underline{v} \cdot \nabla \cdot \underline{P} + \underline{v} \cdot \underline{f} - (v^2/c^2) \cdot \partial E / \partial t$$

$$= -\underline{v} \cdot \nabla p + \underline{v} \cdot \underline{f} - \underline{v} \cdot (c^2 \partial E / \partial t + \nabla \cdot \underline{P})$$

### Gas Energy Equation

Start with: (94.6)  $m^{\alpha\beta}_{, \beta} = F^\alpha + G^\alpha$

$$(94.9a) \quad (\rho_0 c^2 p)_{,t} + (\rho_0 c^2 v^j)_{,j} = v_i f^i + c G^0 = c m^{0\beta}_{, \beta}$$

$$(94.10a) \quad (\rho_0 v^i)_{,t} + (\rho_0 v^i v^j)_{,j} = f_i - p_{,i} + G_i = m^{i\beta}_{, \beta}$$

$$\rho_1 = \gamma p + \gamma p c^2 + \gamma^2 p c^2$$

$$\text{Thus } m^{0\beta}_{, \beta} = c^{-1} [ \gamma p c^2 + \gamma p c + (\gamma^2 - 1) p ]_{,t} + [ (\gamma p c^2 v^j + \gamma p c v^j + \gamma^2 p v^j) ]_{,j}$$

$$\text{and } \gamma m^{i\beta}_{, \beta} = -\gamma [ \gamma p c^2 + \gamma p c + (\gamma^2 - 1) p ]_{,i} + [ \gamma p c^2 v^j + \gamma p c v^j + \gamma^2 p v^j ]_{,j}$$

add  $\gamma c^2 \times$  [cont. eqn].

$$+ \gamma (p c^2)_{,t} + \gamma (p c^2 v^j)_{,j}$$

$$\Rightarrow -\gamma \{ (\gamma - 1) p c^2 + \gamma p c + (\gamma^2 - 1) p \}_{,t} - \gamma \{ (\gamma - 1) p c^2 v^j + \gamma p c v^j + \gamma^2 p v^j \}_{,j}$$

Take limit  $\gamma \rightarrow 1$ ,  $\gamma - 1 \rightarrow \frac{1}{2} \frac{v^2}{c^2}$ ,  $\gamma^2 - 1 \rightarrow \frac{v^2}{c^2}$ , then

$$\gamma_0 m^{0\beta}_{, \beta} \rightarrow - \{ \frac{1}{2} \rho v^2 + p c + \frac{v^2}{c^2} p \}_{,t} - \{ \frac{1}{2} \rho v^2 v^j + p c v^j + p v^j \}_{,j}$$

(and dropping  $O(v^2/c^2)$  terms)

$$\begin{aligned} V_0 m^{0\beta}_{;\beta} &= -\left(\frac{1}{2}\rho v^2\right)_{,t} - (\rho e)_{,t} - \left(\frac{1}{2}\rho v^2 v^j\right)_{,j} - (\rho e v^j)_{,j} - (\rho v^j)_{,j} \\ &= -\left(\frac{1}{2}\rho v^2\right)_{,t} - \rho(De/Dt) - \left(\frac{1}{2}\rho v^2 v^j\right)_{,j} - (\rho v^j)_{,j} \end{aligned}$$

we also have

$$\rho_1 = \rho + \rho v^2/c^2 + \rho v^4/c^4 \quad V_i m^{i\beta}_{;\beta} = v_i (\rho_1 v_i)_{,t} + v_i (\rho_1 v_i v^j)_{,j} + v_i P_{,i}$$

$$= v_i \left[ (\rho + \rho v^2/c^2 + \rho v^4/c^4) v_i \right]_{,t} + v_i \left[ (\rho + \rho v^2/c^2 + \rho v^4/c^4) v_i v^j \right]_{,j} + v_i P_{,i}$$

letting  $\gamma \rightarrow 1$  and dropping  $O(v^2/c^2)$  terms, we have:

$$\begin{aligned} V_i m^{i\beta}_{;\beta} &\cong v_i (\rho v_i)_{,t} + v_i (\rho v_i v^j)_{,j} + v_i P_{,i} \\ &= \left(\frac{1}{2}\rho v^2\right)_{,t} + \left(\frac{1}{2}\rho v^2 v^j\right)_{,j} + v_i P_{,i} \end{aligned}$$

Adding  $V_0 m^{0\beta}_{;\beta} + V_i m^{i\beta}_{;\beta}$

$$\begin{aligned} &= -\left(\frac{1}{2}\rho v^2\right)_{,t} - \rho(De/Dt) - \left(\frac{1}{2}\rho v^2 v^j\right)_{,j} - (\rho v^j)_{,j} \\ &\quad + \left(\frac{1}{2}\rho v^2\right)_{,t} + \left(\frac{1}{2}\rho v^2 v^j\right)_{,j} + v_i P_{,i} \end{aligned}$$

$$\begin{aligned} &= -\rho(De/Dt) - (\rho v^j)_{,j} + v_i P_{,i} \\ &= -\rho(De/Dt) - v^i P_{,i} - \rho v^i_{,i} + v_i P_{,i} \\ &= -\rho(De/Dt) - \rho v^i_{,i} \end{aligned}$$

But  $D\rho/Dt + \rho v^i_{,i} = 0 \Rightarrow v^i_{,i} = -\rho^{-1}(D\rho/Dt) = \rho(D\rho^{-1}/Dt)$

hence

$$V_0 m^{0\beta}_{;\beta} + V_i m^{i\beta}_{;\beta} = -\rho(De/Dt) - \rho \rho(D\rho^{-1}/Dt) = -V_2 F^\alpha + V_2 G^\alpha$$

or, finally

$$\rho(De/Dt) + \rho \rho(D\rho^{-1}/Dt) = -V_2 F^\alpha - V_2 G^\alpha$$

$$\text{or } \rho \left[ De/Dt + \rho D(\rho^{-1})/Dt \right] = -V_2 F^\alpha - V_2 G^\alpha$$

$$(\rho_{000} V^\alpha V^\beta + p g^{\alpha\beta})_{;\beta} = F^\alpha + G^\alpha$$

$$\begin{aligned} V_\alpha (\rho_{000} V^\alpha V^\beta + p g^{\alpha\beta})_{;\beta} &= V_\alpha F^\alpha + V_\alpha G^\alpha \\ &= V_\alpha V^\alpha (\rho_{000} V^\beta)_{;\beta} + V_\alpha \rho_{000} V^\beta (V^\alpha)_{;\beta} + V_\alpha (p g^{\alpha\beta})_{;\beta} = V_\alpha F^\alpha + V_\alpha G^\alpha \\ &= -c^2 (\rho_{000} V^\beta)_{;\beta} + \rho_{000} V^\beta V_\alpha V^\alpha_{;\beta} + V^\alpha P_{;\alpha} \end{aligned}$$

For the heck of it, show by calculation that  $V_\alpha V^\alpha_{;\beta} \equiv 0$ :

$$\begin{aligned} V_\alpha V^\alpha_{;\beta} &= [\gamma(-c, \underline{v})] [\gamma(c, \underline{v})]_{;\beta} \\ &= V_0 V^0_{;\beta} + V_i V^i_{;\beta} \\ \beta=0 &= -\gamma c (\gamma c)_{;t} + \gamma v_i (\gamma v_i)_{;t} \\ &= -\gamma c^2 (\gamma)_{;t} + \gamma^2 (\frac{1}{2} v^2)_{;t} + \gamma v^2 \gamma_{;t} = \gamma (v^2 - c^2) \gamma_{;t} + \gamma^2 (\frac{1}{2} v^2)_{;t} \\ \text{now } \gamma_{;t} &= [(1-\beta^2)^{-1/2}]_{;t} = -\frac{1}{2} (1-\beta^2)^{-3/2} (-2\beta) c^{-1} v_{;t} = \gamma^3 c^{-2} v v_{;t} = \gamma^3 c^{-2} (\frac{1}{2} v^2)_{;t} \\ &= \gamma^2 (\gamma/c^2) (\frac{1}{2} v^2)_{;t} \end{aligned}$$

$$\begin{aligned} \text{and } V_\alpha V^\alpha_{;0} &= \gamma (v^2 - c^2) \cdot \gamma^2 (\gamma/c^2) (\frac{1}{2} v^2)_{;t} + \gamma^2 (\frac{1}{2} v^2)_{;t} \\ &= \gamma^2 (\frac{1}{2} v^2)_{;t} [(\gamma^2/c^2) (v^2 - c^2) + 1] = \gamma^2 (\frac{1}{2} v^2)_{;t} [\gamma^2 (\beta^2 - 1) + 1] \\ &= \gamma^2 (\frac{1}{2} v^2)_{;t} [\gamma^2 (-1/\gamma^2) + 1] \equiv 0 \end{aligned}$$

$$\begin{aligned} \beta=j & V_\alpha V^\alpha_{;j} = V_0 V^0_{;j} + V_i V^i_{;j} \\ &= -\gamma c (\gamma c)_{;j} + \gamma v_i (\gamma v_i)_{;j} = -\gamma c^2 \gamma_{;j} + \gamma^2 (\frac{1}{2} v^2)_{;j} + \gamma v^2 \gamma_{;j} \\ &= \gamma (v^2 - c^2) \gamma_{;j} + \gamma^2 (\frac{1}{2} v^2)_{;j} \end{aligned}$$

$$\begin{aligned} \text{again } \gamma_{;j} &= [(1-\beta^2)^{-1/2}]_{;j} = -\frac{1}{2} \gamma^3 (-2\beta) c^{-1} v_{i;j} = \gamma^3 c^{-2} v_i v_{i;j} = \gamma^3 c^{-2} (\frac{1}{2} v^2)_{;j} \\ &= \gamma^2 (\gamma/c^2) (\frac{1}{2} v^2)_{;j} \end{aligned}$$

$$\begin{aligned} V_\alpha V^\alpha_{;j} &= \gamma (v^2 - c^2) \cdot \gamma^2 (\gamma/c^2) (\frac{1}{2} v^2)_{;j} + \gamma^2 (\frac{1}{2} v^2)_{;j} \\ &= \gamma^2 (\frac{1}{2} v^2)_{;j} [(\gamma^2/c^2) (v^2 - c^2) + 1] \equiv 0 \end{aligned}$$

Hence we have

$$\begin{aligned} V_\alpha M^{\alpha\beta}_{;\beta} &= -c^2 (\rho_{000} V^\beta)_{;\beta} + V^\alpha P_{;\alpha} \\ &= -[\rho_0 (\vec{a} + \vec{e} + p/\rho_0) V^\beta]_{;\beta} + V^\alpha P_{;\alpha} \end{aligned}$$

$$\begin{aligned} \rho_{000} &= \rho_0 + \rho_0 e \vec{e} + p c^{-2} \\ &= (\rho_0/c^2) (\vec{a} + \vec{e} + p/\rho_0) \\ c^2 \rho_{000} &= \rho_0 (\vec{a} + \vec{e} + p/\rho_0) \end{aligned}$$

$$\begin{aligned}
& \text{Now take } V_\alpha M^{\alpha\beta}_{;\beta} + (c^2 + e + p/\rho_0) [ \rho_0 V^\alpha ]_{;\alpha} \\
&= - [ \rho_0 (c^2 + e + p/\rho_0) V^\beta ]_{;\beta} + (c^2 + e + p/\rho_0) (\rho_0 V^\beta)_{;\beta} + V^\alpha p_{,\alpha} \\
&= -(c^2 + e + p/\rho_0) (\rho_0 V^\beta)_{;\beta} + \rho_0 V^\beta (c^2 + e + p/\rho_0)_{;\beta} \\
&\quad + (c^2 + e + p/\rho_0) (\rho_0 V^\beta)_{;\beta} + V^\beta p_{,\beta} \\
&= -\rho_0 V^\beta (e + p/\rho_0)_{;\beta} + V^\beta p_{,\beta} \\
&= -\rho_0 V^\beta e_{;\beta} + \rho_0 V^\beta \rho_0^{-1} p_{,\beta} - \rho_0 V^\beta p (\rho_0^{-1})_{;\beta} + V^\beta p_{,\beta} \\
&= -\rho_0 V^\beta e_{;\beta} + V^\beta p_{,\beta} - \rho_0 p V^\beta (\rho_0^{-1})_{;\beta} + V^\beta p_{,\beta} \\
&= -\rho_0 V^\beta e_{;\beta} - \rho_0 p V^\beta (\rho_0^{-1})_{;\beta}
\end{aligned}$$

But  $V^\beta \frac{\partial}{\partial x^\beta} = \frac{D}{Dt}$ , hence

$$(94.18) \quad V_\alpha M^{\alpha\beta}_{;\beta} = -\rho_0 [ D e / Dt + p D(1/\rho_0) / Dt ] = V_\alpha F^\alpha + V_\alpha G^\alpha$$

Now  $V_\alpha G^\alpha = \delta(-c, \underline{v}) \cdot (G^0, \underline{G}) = -\delta c G^0 + \delta \underline{v} \cdot \underline{G} = \delta(c G^0 + \underline{v} \cdot \underline{G})$   
hence

$$\rho_0 [ D e / Dt + p D(1/\rho_0) / Dt ] = \delta(c G^0 + \underline{v} \cdot \underline{G})$$

and  $Dt = \delta Dt \Rightarrow$

$$(94.19a) \quad \rho_0 [ D e / Dt + p D(1/\rho_0) / Dt ] = c G^0 - \underline{v} \cdot \underline{G}$$

Finally  $G^0 = -c^{-1} (E_{,t} + F^i_{,i})$  (94.2)

$$\underline{G} = R^{j\beta}_{;\beta} = c^{-1} (c^i F^j)_{,t} + P^{ij}_{,j} = c^{-2} F^j_{,t} + P^{ij}_{,j}$$

hence

$$(94.19b) \quad \rho_0 [ D e / Dt + p D(1/\rho_0) / Dt ] = - [ E_{,t} + F^i_{,i} ] - \underline{v} \cdot [ c^{-2} \underline{E}_{,t} + \underline{\nabla} \cdot \underline{P} ]$$

$$(95.1) \quad \frac{1}{c} \frac{\partial I}{\partial t} + \mu \frac{\partial I}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial I}{\partial \mu} = \eta - \chi I$$

now  $I/\gamma^3 = I_0/\gamma_0^3$ ,  $\eta/\gamma^2 = \eta_0/\gamma_0^2$  and  $\chi\gamma = \chi_0\gamma_0$ , hence

$$\frac{1}{c} \frac{\partial}{\partial t} \left( I_0 \frac{\gamma^3}{\gamma_0^3} \right) + \mu \frac{\partial}{\partial r} \left( I_0 \frac{\gamma^3}{\gamma_0^3} \right) + \frac{(1-\mu^2)}{r} \frac{\partial}{\partial \mu} \left( I_0 \frac{\gamma^3}{\gamma_0^3} \right) = \frac{\gamma^2}{\gamma_0^2} (\eta_0 - \chi_0 I_0)$$

and

$$\frac{\partial}{\partial t} \left( I_0 \frac{\gamma^3}{\gamma_0^3} \right) = \frac{\gamma^3}{\gamma_0^3} \frac{\partial I_0}{\partial t} - \frac{3\gamma^3}{\gamma_0^4} I_0 \frac{\partial \gamma_0}{\partial t} = \frac{\gamma^3}{\gamma_0^3} \left[ \frac{\partial I_0}{\partial t} - \frac{3}{\gamma_0} \frac{\partial \gamma_0}{\partial t} \right] \text{ etc.}$$

$$\Rightarrow \frac{\gamma^3}{\gamma_0^3} \left[ \frac{1}{c} \frac{\partial I_0}{\partial t} + \mu \frac{\partial I_0}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial I_0}{\partial \mu} \right] - \frac{3\gamma^3}{\gamma_0^4} I_0 \left[ \frac{1}{c} \frac{\partial \gamma_0}{\partial t} + \mu \frac{\partial \gamma_0}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial \gamma_0}{\partial \mu} \right] = \frac{\gamma^2}{\gamma_0^2} (\eta_0 - \chi_0 I_0)$$

$$(95.2) \quad \Rightarrow \frac{\gamma}{\gamma_0} \left[ \frac{1}{c} \frac{\partial I_0}{\partial t} + \mu \frac{\partial I_0}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial I_0}{\partial \mu} \right] - \frac{3\gamma I_0}{\gamma_0^2} \left[ \frac{1}{c} \frac{\partial \gamma_0}{\partial t} + \mu \frac{\partial \gamma_0}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial \gamma_0}{\partial \mu} \right] = \eta_0 - \chi_0 I_0$$

Use (89.10) and (89.11) to evaluate derivatives  $\frac{\partial \mu_0}{\partial t}$ ,  $\frac{\partial \mu_0}{\partial r}$ ,  $\frac{\partial \gamma_0}{\partial t}$ ,  $\frac{\partial \gamma_0}{\partial r}$ ,  $\frac{\partial \mu_0}{\partial \mu}$ ,  $\frac{\partial \gamma_0}{\partial \mu}$

$$(89.10): \mu_0 = (\mu - \beta) / (1 - \beta\mu) \quad \gamma_0 = \gamma \nu (1 - \beta\mu) \quad (1 - \mu_0^2)^{1/2} = (1 - \mu^2)^{1/2} / \gamma (1 - \beta\mu)$$

$$(89.11): \mu = (\mu_0 + \beta) / (1 + \beta\mu_0) \quad \gamma = \gamma_0 \nu (1 + \beta\mu_0) \quad (1 - \mu^2)^{1/2} = (1 - \mu_0^2)^{1/2} / \gamma (1 + \beta\mu_0)$$

$$\frac{\partial \mu_0}{\partial t} = \frac{1}{(1 - \beta\mu)} \left( -\frac{\partial \beta}{\partial t} \right) + \frac{(\mu - \beta)}{(1 - \beta\mu)^2} \left( +\mu \frac{\partial \beta}{\partial t} \right) = \frac{\partial \beta}{\partial t} \left[ \frac{-(1 - \beta\mu) + \mu(\mu - \beta)}{(1 - \beta\mu)^2} \right] = \frac{\partial \beta / \partial t}{(1 + \beta\mu)^2} [\mu^2 - 1]$$

now

$$(1 - \beta\mu) = \frac{\mu - \beta}{\mu_0} = \frac{1}{\mu_0} \left[ \frac{\mu_0 + \beta}{1 + \beta\mu_0} - \beta \right] = \frac{1}{\mu_0} \left[ \frac{\mu_0 + \beta - \beta - \beta^2 \mu_0}{1 + \beta\mu_0} \right] = \frac{\mu_0 (1 - \beta^2)}{\mu_0 (1 + \beta\mu_0)} = \frac{\gamma^2}{(1 + \beta\mu)}$$

$$\text{hence } (\mu^2 - 1) = (\mu_0^2 - 1) / \gamma^2 (1 + \beta\mu_0)^2$$

$$(\mu^2 - 1) / (1 - \beta\mu)^2 = (\mu_0^2 - 1) \gamma^{-2} (1 + \beta\mu_0)^{-2} (1 + \beta\mu_0)^2 \gamma^4 = \gamma^2 (\mu_0^2 - 1)$$

$$(95.6a) \quad \frac{\partial \mu_0}{\partial t} = \gamma^2 (\mu_0^2 - 1) \frac{\partial \beta}{\partial t} = -\gamma^2 (1 - \mu_0^2) \frac{\partial \beta}{\partial t}$$

an identical analysis (almost) yields

$$(95.7a) \quad \frac{\partial \mu_0}{\partial r} = -\gamma^2 (1 - \mu_0^2) \frac{\partial \beta}{\partial r}$$

$$\frac{\partial \gamma_0}{\partial t} = \frac{\partial}{\partial t} [\gamma \nu (1 - \beta\mu)] = \frac{\partial \gamma}{\partial t} \nu (1 - \beta\mu) + \gamma \nu \left( -\mu \frac{\partial \beta}{\partial t} \right) = \frac{\gamma_0}{\gamma} \frac{\partial \gamma}{\partial t} - \gamma \mu \nu \frac{\partial \beta}{\partial t}$$

$$\text{now } \frac{\partial \gamma}{\partial t} = \frac{\partial}{\partial t} [(1 - \beta^2)^{1/2}] = -\frac{1}{2} (1 - \beta^2)^{-3/2} (-2\beta \frac{\partial \beta}{\partial t}) = \gamma^3 \beta \frac{\partial \beta}{\partial t}$$

$$\text{and } \mu \nu = \gamma_0 \nu (1 + \beta\mu_0) \frac{(\mu_0 + \beta)}{(1 + \beta\mu_0)} = \gamma_0 \nu (\mu_0 + \beta)$$

so

$$\frac{\partial \gamma_0}{\partial t} = \frac{\gamma_0}{\gamma} \left( \gamma^3 \beta \frac{\partial \beta}{\partial t} \right) - \gamma^2 \nu_0 (\mu_0 + \beta) \frac{\partial \beta}{\partial t} = \gamma^2 \nu_0 \frac{\partial \beta}{\partial t} [\beta - \mu_0 - \beta] = -\gamma^2 \mu_0 \nu_0 \frac{\partial \beta}{\partial t}$$

$$(95.6b) \quad \frac{\partial \gamma_0}{\partial r} = -\gamma^2 \mu_0 \nu_0 \frac{\partial \beta}{\partial r}$$

the same analysis, replacing  $\frac{\partial}{\partial t}$  with  $\frac{\partial}{\partial r}$  yields

$$(95.7b) \quad \frac{\partial v_0}{\partial r} = -\gamma^2 \mu_0 v_0 \frac{\partial \beta}{\partial r}$$

$$\frac{\partial \mu}{\partial \mu_0} = \frac{\partial}{\partial \mu_0} \left( \frac{\mu_0 + \beta}{1 + \beta \mu_0} \right) = \frac{1}{1 + \beta \mu_0} - \frac{\mu_0 + \beta}{(1 + \beta \mu_0)^2} \beta = \frac{1}{(1 + \beta \mu_0)^2} [1 + \beta \mu_0 - \beta \mu_0 - \beta^2]$$

$$\text{and } \mu_{0,3} = (1 + \beta^2) / (1 + \beta \mu_0)^2 = \gamma^{-2} (1 + \beta \mu_0)^{-2}$$

$$(95.8) \quad \frac{\partial \mu_0}{\partial \mu} = \left( \frac{\partial \mu}{\partial \mu_0} \right)^{-1} = \gamma^2 (1 + \beta \mu_0)^2$$

$$\left. \frac{\partial v_0}{\partial \mu} \right|_{\text{vt}} = \frac{\partial}{\partial \mu} [\gamma v (1 - \beta \mu)] = -\gamma v \beta = -\gamma \beta [\gamma v_0 (1 + \beta \mu_0)]$$

$$(95.8) \quad \frac{\partial v_0}{\partial \mu} = -\gamma^2 \beta v_0 (1 + \beta \mu_0) \quad \text{Disagrees with D's text.}$$

We use these results in the transfer eqn (95.2) with the derivative

$$\text{expressions: } \frac{\partial}{\partial t} \Big|_{r_{\mu\nu}} = \frac{\partial}{\partial t} \Big|_{r_{\mu_0\nu_0}} + \frac{\partial \mu_0}{\partial t} \Big|_{r_{\mu\nu}} \frac{\partial}{\partial \mu_0} + \frac{\partial v_0}{\partial t} \Big|_{r_{\mu\nu}} \frac{\partial}{\partial v_0}$$

$$\frac{\partial}{\partial r} \Big|_{t_{\mu\nu}} = \frac{\partial}{\partial r} \Big|_{t_{\mu_0\nu_0}} + \frac{\partial \mu_0}{\partial r} \Big|_{t_{\mu\nu}} \frac{\partial}{\partial \mu_0} + \frac{\partial v_0}{\partial r} \Big|_{t_{\mu\nu}} \frac{\partial}{\partial v_0}$$

$$\frac{\partial}{\partial \mu} \Big|_{t_{r\nu}} = \frac{\partial}{\partial \mu} \Big|_{t_{r\nu_0}} + \frac{\partial \mu_0}{\partial \mu} \Big|_{t_{r\nu}} \frac{\partial}{\partial \mu_0} + \frac{\partial v_0}{\partial \mu} \Big|_{t_{r\nu}} \frac{\partial}{\partial v_0}$$

of the results just derived, we have:

$$\frac{\partial \mu_0}{\partial t} = -\gamma^2 (1 - \mu_0^2) \frac{\partial \beta}{\partial t} \quad \frac{\partial v_0}{\partial t} = -\gamma^2 v_0 \mu_0 \left( \frac{\partial \beta}{\partial t} \right)$$

$$\frac{\partial \mu_0}{\partial r} = -\gamma^2 (1 - \mu_0^2) \frac{\partial \beta}{\partial r} \quad \frac{\partial v_0}{\partial r} = -\gamma^2 v_0 \mu_0 \left( \frac{\partial \beta}{\partial r} \right)$$

$$\frac{\partial \mu_0}{\partial \mu} = \gamma^2 (1 + \beta \mu_0)^2 \quad \frac{\partial v_0}{\partial \mu} = -\beta \gamma^2 (1 + \beta \mu_0) v_0$$

$$\text{need } v = \gamma v_0 (1 + \beta \mu_0) \quad \text{or } (v/v_0) = \gamma (1 + \beta \mu_0)$$

$$1 = \frac{\partial I_0}{\partial t} \Big|_{r_{\mu_0\nu_0}} - \gamma^2 (1 - \mu_0^2) \frac{\partial \beta}{\partial t} \frac{\partial I_0}{\partial \mu_0} - \gamma^2 v_0 \mu_0 \frac{\partial \beta}{\partial t} \frac{\partial I_0}{\partial v_0}$$

$$v = \frac{\mu_0 + \beta}{(1 + \beta \mu_0)} \left\{ \frac{\partial I_0}{\partial r} \Big|_{r_{\mu_0\nu_0}} - \gamma^2 (1 - \mu_0^2) \frac{\partial \beta}{\partial r} \frac{\partial I_0}{\partial \mu_0} - \gamma^2 v_0 \mu_0 \frac{\partial \beta}{\partial r} \frac{\partial I_0}{\partial v_0} \right\}$$

$$\frac{\partial \mu}{\partial r_{\mu\nu}} = \frac{(1 - \mu_0^2)}{\gamma^2 (1 + \beta \mu_0)^2} \left\{ \gamma^2 (1 + \beta \mu_0)^2 \frac{\partial I_0}{\partial \mu_0} - \beta \gamma^2 (1 + \beta \mu_0) v_0 \frac{\partial I_0}{\partial v_0} \right\}$$

$$\begin{aligned}
& \text{and } \frac{v}{v_0} \left[ \frac{1}{c} \frac{\partial I_0}{\partial t} + \mu \frac{\partial I_0}{\partial r} + \frac{(1-\mu^2)}{r} \frac{\partial I_0}{\partial \mu} \right] \\
&= \gamma(1+\beta\mu_0) \left\{ \frac{1}{c} \frac{\partial I_0}{\partial t} + \frac{(\mu_0+\beta)}{(1+\beta\mu_0)} \frac{\partial I_0}{\partial r} \right\} \\

$$- \gamma^3 \frac{\partial \beta}{\partial r} \int (1-\mu_0^2)(\mu_0 + \beta) \frac{\partial I_0}{\partial \mu_0} - \frac{\gamma v_0}{\gamma} \int (1-\mu_0^2) \frac{\partial I_0}{\partial v_0} \frac{d\omega_0}{4\pi} - \frac{\partial^3 v_0}{c} \frac{\partial \beta}{\partial t} \int \mu_0 (1+\beta\mu_0) \frac{\partial I_0}{\partial v_0} \frac{d\omega_0}{4\pi} - \gamma^3 v_0 \frac{\partial \beta}{\partial r} \int \mu_0 (\mu_0 + \beta) \frac{\partial I_0}{\partial v_0} \frac{d\omega_0}{4\pi}$$

$$+ \frac{3\gamma\beta}{\gamma} \int (1-\mu_0^2) I_0 \frac{d\omega_0}{4\pi} + \frac{3\gamma^3}{c} \frac{\partial \beta}{\partial t} \int \mu_0 (1+\beta\mu_0) I_0 \frac{d\omega_0}{4\pi} + 3\gamma^3 \frac{\partial \beta}{\partial r} \int \mu_0 (\mu_0 + \beta) I_0 \frac{d\omega_0}{4\pi} = \int (\gamma_0 - \gamma_0 I_0) \frac{d\omega_0}{4\pi}$$

$$(b) \quad = \frac{\gamma}{c} \left[ \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right] + \gamma \left[ \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right] + \frac{\gamma}{\gamma} (1-\mu_0^2 + \beta\mu_0 - \beta\mu_0^3) \frac{\partial I_0}{\partial \mu_0} \frac{d\omega_0}{4\pi} - \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} \int (1-\mu_0^2 + \beta\mu_0 - \beta\mu_0^3) \frac{\partial I_0}{\partial \mu_0} \frac{d\omega_0}{4\pi}$$

$$- \gamma^3 \frac{\partial \beta}{\partial r} \int (\mu_0 - \mu_0^3 + \beta - \beta\mu_0^2) \frac{\partial I_0}{\partial \mu_0} \frac{d\omega_0}{4\pi} - \frac{\gamma v_0}{\gamma} \left( \frac{\partial J_0}{\partial v_0} - \frac{\partial K_0}{\partial v_0} \right) - \frac{\gamma^3 v_0}{c} \frac{\partial \beta}{\partial t} \left( \frac{\partial H_0}{\partial v_0} + \beta \frac{\partial K_0}{\partial v_0} \right) - \gamma^3 v_0 \frac{\partial \beta}{\partial r} \left( \frac{\partial K_0}{\partial v_0} + \beta \frac{\partial H_0}{\partial v_0} \right)$$

$$+ \frac{3\gamma\beta}{\gamma} (J_0 - K_0) + \frac{3\gamma^3}{c} \frac{\partial \beta}{\partial t} (H_0 + \beta K_0) + 3\gamma^3 \frac{\partial \beta}{\partial r} (\beta H_0 + K_0) = \gamma_0 - \gamma_0 J_0$$

Evaluate  $\int (1-\mu_0^2 + \beta\mu_0 - \beta\mu_0^3) \frac{\partial I_0}{\partial \mu_0} d\mu_0 = \int_{\mu_0=0}^1 \left\{ (1-\mu_0^2 + \beta\mu_0 - \beta\mu_0^3) I_0 \right\} d\mu_0$   
 $- \int I_0 \frac{\partial}{\partial \mu_0} (1-\mu_0^2 + \beta\mu_0 - \beta\mu_0^3) d\mu_0$

$$= \left[ I_0 (1-\mu_0^2 + \beta\mu_0 - \beta\mu_0^3) \right]_{\mu_0=0}^1 - \int I_0 [-2\mu_0 + \beta - 3\beta\mu_0^2] d\mu_0$$

$$= I_0 (\mu_0=1) (1-1+\beta-\beta) - I_0 (-1) [-1+\beta(1+1)] + \int I_0 (2\mu_0 - \beta + 3\beta\mu_0^2) d\mu_0$$

$$(c) \quad = 0 + 0 + (2H_0 - \beta J_0 + 3\beta K_0) = -( \beta J_0 + 2H_0 - 3\beta K_0 )$$

Similarly  $\int (\mu_0 - \mu_0^3 + \beta - \beta\mu_0^2) \frac{\partial I_0}{\partial \mu_0} d\mu_0 = 0 - \int I_0 \frac{\partial}{\partial \mu_0} (\mu_0 - \mu_0^3 + \beta - \beta\mu_0^2) d\mu_0$   
 $= - \int I_0 (1 - 3\mu_0^2 - 2\beta\mu_0) d\mu_0 = \int I_0 (2\beta\mu_0 + 3\mu_0^2 - 1) d\mu_0$   
 $(d) \quad = (-J_0 + 2\beta H_0 + 3K_0) = -(J_0 - 2\beta H_0 - 3K_0)$

Thus the three terms in  $\partial I_0 / \partial \mu_0$  integrate to:

$$(e) \quad \left( -\frac{\gamma}{\gamma} + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} \right) (\beta J_0 - 2H_0 - 3\beta K_0) + \gamma^3 \frac{\partial \beta}{\partial r} (J_0 - 2\beta H_0 - 3K_0)$$

Add these terms to the 3<sup>rd</sup> line of (b):

$$-\frac{\gamma}{\gamma} (\beta J_0 - 2H_0 - 3\beta K_0) + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (\beta J_0 - 2H_0 - 3\beta K_0) + \gamma^3 \frac{\partial \beta}{\partial r} (J_0 - 2\beta H_0 - 3K_0)$$

$$+ \frac{\gamma}{\gamma} (3\beta J_0 - 3\beta K_0) + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (3H_0 + 3\beta K_0) + \gamma^3 \frac{\partial \beta}{\partial r} (3\beta H_0 + 3K_0)$$

$$= \frac{\gamma}{\gamma} (2\beta J_0 + 2H_0) + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (\beta J_0 + H_0) + \gamma^3 \frac{\partial \beta}{\partial r} (J_0 + \beta H_0)$$

Thus the entire zeroth moment equation becomes:

(95.11)

$$\frac{\gamma}{c} \left( \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right) + \gamma \left( \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right) - \frac{\gamma v_0 \beta}{r} \left( \frac{\partial J_0}{\partial v_0} - \frac{\partial K_0}{\partial v_0} \right) - \frac{\gamma^3 v_0}{c} \frac{\partial \beta}{\partial t} \left( \frac{\partial H_0}{\partial v_0} + \beta \frac{\partial K_0}{\partial v_0} \right) - \frac{\gamma^3 v_0}{c} \frac{\partial \beta}{\partial r} \left( \frac{\partial K_0}{\partial v_0} + \beta \frac{\partial H_0}{\partial v_0} \right) + \frac{2\gamma}{r} (\beta J_0 + H_0) + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (\beta J_0 + H_0) + \gamma^3 \frac{\partial \beta}{\partial r} (J_0 + \beta H_0) = \eta_0 - \chi_0 J_0$$

Now start again and integrate against  $\mu_0 d\omega_0/4\pi$ :

$$\begin{aligned} & \frac{\gamma}{c} \int (\mu_0 + \beta \mu_0^2) \frac{\partial I_0}{\partial t} \frac{d\omega_0}{4\pi} + \gamma \int (\mu_0^2 + \beta \mu_0) \frac{\partial I_0}{\partial r} \frac{d\omega_0}{4\pi} + \gamma \int (\mu_0 - \mu_0^3) \left\{ \frac{1 + \beta \mu_0}{r} - \frac{\partial^2}{c} (1 + \beta \mu_0) \frac{\partial \beta}{\partial t} - \gamma^2 (\mu_0 + \beta) \frac{\partial \beta}{\partial r} \right\} \frac{\partial I_0}{\partial \mu_0} \frac{d\omega_0}{4\pi} \\ & - \gamma v_0 \int \left\{ \frac{(1 - \mu_0^2) \beta}{r} + \frac{\partial^2}{c} (1 + \beta \mu_0) \mu_0 \frac{\partial \beta}{\partial t} + \gamma^2 \mu_0 (\mu_0 + \beta) \frac{\partial \beta}{\partial r} \right\} \mu_0 \frac{\partial I_0}{\partial v_0} \\ & + 3 \gamma \int \left\{ \beta \frac{(1 - \mu_0^2)}{r} + \frac{\partial^2}{c} \mu_0 (1 + \beta \mu_0) \frac{\partial \beta}{\partial t} + \gamma^2 \mu_0 (\mu_0 + \beta) \frac{\partial \beta}{\partial r} \right\} \mu_0 I_0 \frac{d\omega_0}{4\pi} = \int \mu_0 (\eta_0 - \chi_0 I_0) \frac{d\omega_0}{4\pi} \\ & = \frac{\gamma}{c} \left( \frac{\partial H_0}{\partial t} + \beta \frac{\partial K_0}{\partial t} \right) + \gamma \left( \beta \frac{\partial H_0}{\partial r} + \frac{\partial K_0}{\partial r} \right) - \gamma v_0 \left\{ \frac{\beta}{r} \int (\mu_0 - \mu_0^3) \frac{\partial I_0}{\partial v_0} \frac{d\omega_0}{4\pi} + \frac{\gamma}{c} \int (\mu_0^2 + \beta \mu_0^3) \frac{\partial \beta}{\partial t} \frac{\partial I_0}{\partial v_0} \frac{d\omega_0}{4\pi} + \frac{\partial^2 \beta}{\partial r} \int (\mu_0^3 + \beta \mu_0^4) \frac{\partial I_0}{\partial v_0} \frac{d\omega_0}{4\pi} \right\} \\ & + \frac{\gamma}{r} \int (\mu_0 - \mu_0^3) (1 + \beta \mu_0) \frac{\partial I_0}{\partial \mu_0} \frac{d\omega_0}{4\pi} - \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} \int (\mu_0 - \mu_0^3) (1 + \beta \mu_0) \frac{\partial I_0}{\partial \mu_0} \frac{d\omega_0}{4\pi} - \frac{\gamma^3}{\partial r} \int (\mu_0 - \mu_0^3) (\mu_0 + \beta) \frac{\partial I_0}{\partial \mu_0} \frac{d\omega_0}{4\pi} \\ & + 3 \gamma \frac{\partial \beta}{r} \int (\mu_0 - \mu_0^3) I_0 \frac{d\omega_0}{4\pi} + \frac{3 \gamma^3}{c} \frac{\partial \beta}{\partial t} \int (\mu_0^2 + 3 \mu_0^3) I_0 \frac{d\omega_0}{4\pi} + 3 \gamma^3 \frac{\partial \beta}{\partial r} \int (\mu_0^3 + 3 \mu_0^2) I_0 \frac{d\omega_0}{4\pi} = (\eta_0 - \chi_0 I_0) \mu_0 \frac{d\omega_0}{4\pi} \end{aligned}$$

Again we must integrate terms in  $\frac{\partial I_0}{\partial \mu_0}$  by parts:

$$\begin{aligned} & \int (\mu_0 - \mu_0^3) (1 + \beta \mu_0) \frac{\partial I_0}{\partial \mu_0} d\mu_0 = \int (\mu_0 - \mu_0^3 + \beta \mu_0^2 - 3 \mu_0^4) \frac{\partial I_0}{\partial \mu_0} d\mu_0 \\ & = \int \frac{\partial}{\partial \mu_0} \left\{ (\mu_0 - \mu_0^3 + \beta \mu_0^2 - \beta \mu_0^4) I_0 \right\} d\mu_0 - \int I_0 \frac{\partial}{\partial \mu_0} (\mu_0 + \beta \mu_0^2 - \mu_0^3 - \beta \mu_0^4) d\mu_0 \\ & = \left[ (\mu_0 - \mu_0^3 + \beta \mu_0^2 - \beta \mu_0^4) I_0 \right]_{-1}^{+1} - \int I_0 (1 + 2\beta \mu_0 - 3\mu_0^2 - 4\beta \mu_0^3) d\mu_0 \\ & = 0 - (J_0 + 2\beta H_0 - 3K_0 - 4\beta N_0) = (-J_0 + 3K_0 - 2\beta H_0 + 4\beta N_0) \end{aligned}$$

$$\begin{aligned} \text{and } & \int (\mu_0 - \mu_0^3) (\mu_0 + \beta) \frac{\partial I_0}{\partial \mu_0} d\mu_0 = \int (\mu_0^2 - \mu_0^4 + \beta \mu_0 - \beta \mu_0^3) \frac{\partial I_0}{\partial \mu_0} d\mu_0 \\ & = - \int I_0 \frac{\partial}{\partial \mu_0} (\mu_0^2 - \mu_0^4 + \beta \mu_0 - \beta \mu_0^3) d\mu_0 = - \int I_0 [2\mu_0 - 4\mu_0^3 + \beta - 3\beta \mu_0^2] d\mu_0 \\ & = -(2H_0 - 4N_0 + \beta J_0 - 3\beta K_0) = (-\beta J_0 - 2H_0 + 3\beta K_0 + 4N_0) \end{aligned}$$

The terms in  $\frac{\partial I_0}{\partial \mu_0}$  then become:

$$\frac{\gamma}{r} (-J_0 + 3K_0 - 2\beta H_0 + 4\beta N_0) - \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (-J_0 + 3K_0 - 2\beta H_0 + 4\beta N_0) - \frac{\gamma^3}{\partial r} (-\beta J_0 - 2H_0 + 3\beta K_0 + 4N_0)$$

and the terms in  $I_0$  are:

$$\frac{\gamma}{r} (3\beta H_0 - 3\beta N_0) + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (3K_0 + 3\beta N_0) + \gamma^3 \frac{\partial \beta}{\partial r} (3\beta K_0 + 3N_0)$$

Adding these two sets of terms we obtain:

$$\frac{\gamma}{c} (-J_0 + \beta H_0 + 3K_0 + \beta N_0) + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (J_0 + 2\beta H_0 - \beta N_0) + \gamma^3 \frac{\partial \beta}{\partial r} (\beta J_0 + 2H_0 - N_0)$$

Thus the 1st moment equation becomes

$$(95.12) \quad \frac{\gamma}{c} \left( \frac{\partial H_0}{\partial t} + \beta \frac{\partial K_0}{\partial t} \right) + \gamma \left( \beta \frac{\partial H_0}{\partial r} + \frac{\partial K_0}{\partial r} \right) - \gamma v_0 \left\{ \frac{\gamma}{c} \left( \frac{\partial H_0}{\partial v_0} - \frac{\partial N_0}{\partial v_0} \right) + \frac{\gamma^2}{c} \frac{\partial \beta}{\partial t} \left( \frac{\partial K_0}{\partial v_0} + \beta \frac{\partial N_0}{\partial v_0} \right) + \gamma^2 \frac{\partial \beta}{\partial r} \left( \beta \frac{\partial K_0}{\partial v_0} + \frac{\partial N_0}{\partial v_0} \right) \right. \\ \left. + \frac{\gamma}{r} (-J_0 + \beta H_0 + 3K_0 + \beta N_0) + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (J_0 + 2\beta H_0 - \beta N_0) + \gamma^3 \frac{\partial \beta}{\partial r} (\beta J_0 + 2H_0 - N_0) \right\} = -\chi_0 H_0$$

Integrate over  $dv_0$  to obtain frequency-integrated moment equations:  
(95.11) becomes:

$$\frac{\gamma}{c} \int \left( \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right) dv_0 + \gamma \int \left( \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right) dv_0 - \frac{\gamma \beta}{r} \int \left( \frac{\partial K_0}{\partial v_0} - \frac{\partial K_0}{\partial v_0} \right) v_0 dv_0 - \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} \int \left( \frac{\partial H_0}{\partial v_0} + \beta \frac{\partial K_0}{\partial v_0} \right) v_0 dv_0 \\ - \gamma^3 \frac{\partial \beta}{\partial r} \int \left( \frac{\partial K_0}{\partial v_0} + \beta \frac{\partial H_0}{\partial v_0} \right) v_0 dv_0 + 2\frac{\gamma}{r} \int (\beta J_0 + H_0) dv_0 + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} \int (\beta J_0 + H_0) dv_0 + \gamma^3 \frac{\partial \beta}{\partial r} \int (J_0 + \beta H_0) dv_0 \\ = \int (\dot{M}_0 - \chi_0 J_0) dv_0$$

Using now the symbols  $J_0^f, K_0, H_0 + N_0$  to mean frequency-integrated quantities, we have

$$\frac{\gamma}{c} \left( \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right) + \gamma \left( \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right) + \frac{2\gamma}{r} (\beta J_0 + H_0) + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (\beta J_0 + H_0) + \gamma^3 \frac{\partial \beta}{\partial r} (J_0 + \beta H_0) \\ - \frac{\gamma \beta}{r} \int v_0 dv_0 \left( \frac{\partial J_0(v_0)}{\partial v_0} - \frac{\partial K_0(v_0)}{\partial v_0} \right) - \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} \int v_0 dv_0 \left( \frac{\partial H_0(v_0)}{\partial v_0} + \beta \frac{\partial K_0(v_0)}{\partial v_0} \right) - \gamma^3 \frac{\partial \beta}{\partial r} \int v_0 dv_0 \left( \frac{\partial K_0(v_0)}{\partial v_0} + \beta \frac{\partial H_0(v_0)}{\partial v_0} \right) \\ = \int (\dot{M}_0(v_0) - \chi_0(v_0) J_0(v_0)) dv_0$$

Integrating the terms in  $\partial/\partial v_0$  by parts we obtain:

$$\int v_0 dv_0 \left( \frac{\partial J_0(v_0)}{\partial v_0} - \frac{\partial K_0(v_0)}{\partial v_0} \right) = \int \frac{2}{\partial v_0} [v_0 J_0 - v_0 K_0] dv_0 - \int (J_0 + K_0) dv_0 \\ = [v_0 J_0 - v_0 K_0]_{v_0=0}^{\infty} - (J_0 - K_0)$$

As  $v_0 \rightarrow \infty$ ,  $J_0$  and  $K_0 \rightarrow 0$  exponentially, while at  $v_0=0$ ,  $J_0 + K_0$  are finite hence  $\int = 0 - (J_0 + K_0)$

and

$$- \frac{\gamma \beta}{r} \int v_0 dv_0 \left( \frac{\partial J_0(v_0)}{\partial v_0} - \frac{\partial K_0(v_0)}{\partial v_0} \right) = + \frac{\gamma \beta}{r} (J_0 - K_0)$$

A similar analysis gives:

$$-\gamma^3 \frac{\partial \beta}{\partial t} \int \left( \frac{\partial H_0(v_0)}{\partial v_0} + \beta \frac{\partial K_0(v_0)}{\partial v_0} \right) v_0 dv_0 = + \gamma^3 \frac{\partial \beta}{\partial t} \int (H_0(v_0) + \beta K_0(v_0)) dv_0 = \gamma^3 \frac{\partial \beta}{\partial t} (H_0 + \beta K_0)$$

and

$$-\gamma^3 \frac{\partial \beta}{\partial r} \int \left( \frac{\partial H_0(v_0)}{\partial v_0} + \beta \frac{\partial K_0(v_0)}{\partial v_0} \right) v_0 dv_0 = \gamma^3 \frac{\partial \beta}{\partial r} \int (K_0(v_0) + \beta H_0(v_0)) dv_0 = \gamma^3 \frac{\partial \beta}{\partial r} (K_0 + \beta H_0)$$

The  $v_0$ -integrated zeroth moment eqn becomes:

$$\begin{aligned} & \frac{\gamma}{c} \left( \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right) + \gamma \left( \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right) + \frac{\gamma}{r} (\beta J_0 + H_0) + \gamma^3 \frac{\partial \beta}{\partial t} (\beta J_0 + H_0) + \gamma^3 \frac{\partial \beta}{\partial r} (J_0 + \beta H_0) \\ & + \frac{\gamma}{r} (\beta J_0 - \beta K_0) + \gamma^3 \frac{\partial \beta}{\partial t} (H_0 + \beta K_0) + \gamma^3 \frac{\partial \beta}{\partial r} (K_0 + \beta H_0) \\ & = \int (\eta_0(v_0) - \chi_0(v_0) J_0(v_0)) dv_0 \end{aligned}$$

(9.13)

$$\begin{aligned} & \frac{\gamma}{c} \left( \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right) + \gamma \left( \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right) + \frac{\gamma}{r} [3\beta J_0 + 2H_0 - \beta K_0] + \gamma^3 \frac{\partial \beta}{\partial t} [\beta J_0 + 2H_0 + \beta K_0] \\ & + \gamma^3 \frac{\partial \beta}{\partial r} [J_0 + 2\beta H_0 + K_0] = \int_0^\infty [\eta_0(v_0) - \chi_0(v_0) J_0(v_0)] dv_0 \end{aligned}$$

Now integrate the first moment equation over frequency:

$$\begin{aligned} & \frac{\gamma}{c} \int \left( \frac{\partial H_0(v_0)}{\partial t} + \beta \frac{\partial K_0(v_0)}{\partial t} \right) dv_0 + \gamma \int \left( \beta \frac{\partial H_0(v_0)}{\partial r} + \frac{\partial K_0(v_0)}{\partial r} \right) dv_0 \\ & + \frac{\gamma}{r} \int [-J_0(v_0) + \beta H_0(v_0) + 3K_0(v_0) + \beta N_0(v_0)] dv_0 + \gamma^3 \frac{\partial \beta}{\partial t} \int [J_0(v_0) + 2\beta H_0(v_0) - \beta N_0(v_0)] dv_0 \\ & + \gamma^3 \frac{\partial \beta}{\partial r} \int [3J_0(v_0) + 2H_0(v_0) - N_0(v_0)] dv_0 \\ & - \gamma \beta \int \left( \frac{\partial H_0(v_0)}{\partial v_0} - \frac{\partial N_0(v_0)}{\partial v_0} \right) v_0 dv_0 - \gamma^3 \frac{\partial \beta}{\partial t} \int \left[ \frac{\partial K_0(v_0)}{\partial v_0} + \beta \frac{\partial H_0(v_0)}{\partial v_0} \right] v_0 dv_0 - \gamma^3 \frac{\partial \beta}{\partial r} \int \left[ \beta \frac{\partial K_0(v_0)}{\partial v_0} + \frac{\partial N_0(v_0)}{\partial v_0} \right] v_0 dv_0 \\ & = - \int \chi_0(v_0) H_0(v_0) dv_0 \end{aligned}$$

The terms in  $\partial/\partial v_0$  become:

$$\begin{aligned} & -(\gamma\beta/r) \left\{ - \int (H_0(v_0) - N_0(v_0)) dv_0 \right\} = \frac{\gamma}{r} (\beta H_0 - \beta N_0) \\ & - \gamma^3 \frac{\partial \beta}{\partial t} \left\{ - \int (K_0(v_0) + \beta N_0(v_0)) dv_0 \right\} = \gamma^3 \frac{\partial \beta}{\partial t} (K_0 + \beta N_0) \\ & - \gamma^3 \frac{\partial \beta}{\partial r} \left\{ - \int [\beta K_0(v_0) + N_0(v_0)] dv_0 \right\} = \gamma^3 \frac{\partial \beta}{\partial r} (\beta K_0 + N_0) \end{aligned}$$

and the equation becomes

$$\begin{aligned} & \frac{\gamma}{c} \left( \frac{\partial H_0}{\partial t} + \beta \frac{\partial K_0}{\partial t} \right) + \gamma \left( \beta \frac{\partial H_0}{\partial r} + \frac{\partial K_0}{\partial r} \right) + \frac{\gamma}{r} (-J_0 + \beta H_0 + 3K_0 + \beta N_0) + \frac{\gamma}{r} (\beta H_0 - \beta N_0) \\ & + \gamma^3 \frac{\partial \beta}{\partial t} (J_0 + 2\beta H_0 - \beta N_0) + \gamma^3 \frac{\partial \beta}{\partial t} (K_0 + \beta N_0) + \gamma^3 \frac{\partial \beta}{\partial r} (\beta J_0 + 2H_0 - N_0) + \gamma^3 \frac{\partial \beta}{\partial r} (\beta K_0 + N_0) \\ & = - \int \chi_0(v_0) H_0(v_0) dv_0 \end{aligned}$$

$$(9.14) \quad \frac{\gamma}{c} \left( \frac{\partial H_0}{\partial t} + \beta \frac{\partial K_0}{\partial t} \right) + \gamma \left( \beta \frac{\partial H_0}{\partial r} + \frac{\partial K_0}{\partial r} \right) + \frac{\gamma}{r} (-J_0 + 2\beta H_0 + 3K_0) + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} (J_0 + K_0 + 2\beta H_0) \\ + \gamma^3 \frac{\partial \beta}{\partial r} (2H_0 + \beta J_0 + \beta K_0) = - \int \gamma_0(v_0) H_0(v_0) dv_0$$

Now check these by using inertial-frame moment equations and transforming  $(J, H, K) \rightarrow (J_0, H_0, K_0)$  via eqns (9.13)-(9.15)

$$c^{-1} \frac{\partial J}{\partial t} + \frac{\partial H}{\partial r} + \frac{2H}{r} = - \left( \frac{c}{4\pi} \right) G^0$$

$$c^{-1} \frac{\partial H}{\partial t} + \frac{\partial K}{\partial r} + \frac{3K-J}{r} = - \left( \frac{c}{4\pi} \right) G^1$$

Write (9.13)-(9.15) in terms of  $J, H, K$  etc using  $E = \frac{4\pi}{c} J, F = 4\pi H, P = \frac{4\pi}{c} K$

Then  $\frac{4\pi}{c} J = \gamma^2 \left[ \frac{4\pi}{c} J_0 + 2\beta \frac{4\pi}{c} H_0 + \beta^2 \frac{4\pi}{c} K_0 \right]$

$$(9.13') \quad \Rightarrow J = \gamma^2 [J_0 + 2\beta H_0 + \beta^2 K_0] \quad (9.13')$$

$$4\pi H = \gamma^2 [(1+\beta^2)4\pi H_0 + \beta 4\pi J_0 + \beta 4\pi K_0]$$

$$(9.14') \quad H = \gamma^2 [(1+\beta^2)H_0 + \beta J_0 + \beta K_0] \quad (9.14')$$

$$\frac{4\pi}{c} K = \gamma^2 \left( \frac{4\pi}{c} K_0 + 2\beta \frac{4\pi}{c} H_0 + \beta^2 \frac{4\pi}{c} J_0 \right)$$

$$(9.15') \quad K = \gamma^2 (K_0 + 2\beta H_0 + \beta^2 J_0)$$

Then

$$c^{-1} \frac{\partial}{\partial t} \left\{ \gamma^2 [J_0 + 2\beta H_0 + \beta^2 K_0] \right\} + \frac{\partial}{\partial r} \left\{ \gamma^2 [(1+\beta^2)H_0 + \beta J_0 + \beta K_0] \right\}$$

$$+ \frac{2}{r} \left\{ \gamma^2 [(1+\beta^2)H_0 + \beta J_0 + \beta K_0] \right\} = - \frac{c}{4\pi} G^0$$

$$= c^{-1} \frac{\partial \gamma^2}{\partial t} [J_0 + 2\beta H_0 + \beta^2 K_0] + c^{-1} \gamma^2 \left[ \frac{\partial J_0}{\partial t} + 2 \frac{\partial}{\partial t} (\beta H_0) + \frac{\partial}{\partial t} (\beta^2 K_0) \right]$$

$$+ \frac{\partial \gamma^2}{\partial r} [(1+\beta^2)H_0 + \beta J_0 + \beta K_0] + \gamma^2 \left\{ \frac{\partial}{\partial r} [(1+\beta^2)H_0] + \frac{\partial}{\partial r} (\beta J_0) + \frac{\partial}{\partial r} (\beta K_0) \right\}$$

$$+ \frac{2\gamma^2}{r} \left\{ (1+\beta^2)H_0 + \beta J_0 + \beta K_0 \right\} = - \frac{c}{4\pi} G^0$$

now evaluate  $\frac{\partial \gamma^2}{\partial t} = 2\gamma \frac{\partial}{\partial t} (1-\beta^2)^{-1/2} = 2\gamma \frac{\partial}{\partial t} (1-\beta^2)^{-1/2} (\beta \frac{\partial \beta}{\partial t})$

$$= 2\gamma \cdot \gamma^3 \cdot \beta \frac{\partial \beta}{\partial t} = 2\gamma^4 \beta \frac{\partial \beta}{\partial t}$$

Similarly  $\frac{\partial \gamma^2}{\partial r} = 2\gamma^4 \beta \frac{\partial \beta}{\partial r}$

Hence we have:

$$\begin{aligned} & c^{-1} \left( 2\gamma^4 \beta \frac{\partial \beta}{\partial t} \right) (J_0 + 2\beta H_0 + \beta^2 K_0) + c^{-1} \gamma^2 \left( \frac{\partial J_0}{\partial t} + 2\beta \frac{\partial H_0}{\partial t} + \beta^2 \frac{\partial K_0}{\partial t} \right) + c^{-1} \gamma^2 \frac{\partial \beta}{\partial t} (2H_0 + 2\beta K_0) \\ & + 2\gamma^4 \beta \frac{\partial \beta}{\partial r} \left[ (1+\beta^2) H_0 + \beta J_0 + \beta K_0 \right] + \gamma^2 \left\{ (1+\beta^2) \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} + \beta \frac{\partial K_0}{\partial r} \right\} + \gamma^2 \frac{\partial \beta}{\partial r} [2\beta H_0 + J_0 + K_0] \\ & + \frac{2\gamma^2}{r} \left\{ (1+\beta^2) H_0 + \beta J_0 + \beta K_0 \right\} = -\frac{c}{4\pi} G^0 \end{aligned}$$

$$\begin{aligned} \text{or } & c^{-1} \gamma^2 \left( \frac{\partial J_0}{\partial t} + 2\beta \frac{\partial H_0}{\partial t} + \beta^2 \frac{\partial K_0}{\partial t} \right) + \gamma^2 \left\{ (1+\beta^2) \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} + \beta \frac{\partial K_0}{\partial r} \right\} \\ & + c^{-1} \gamma^2 \frac{\partial \beta}{\partial t} \left\{ 2\gamma^2 \beta (J_0 + 2\beta H_0 + \beta^2 K_0) + (2H_0 + 2\beta K_0) \right\} \\ & + \gamma^2 \frac{\partial \beta}{\partial r} \left\{ 2\gamma^2 \beta [(1+\beta^2) H_0 + \beta J_0 + \beta K_0] + (2\beta H_0 + J_0 + K_0) \right\} \\ & + \frac{2\gamma^2}{r} \left\{ (1+\beta^2) H_0 + \beta J_0 + \beta K_0 \right\} = -\frac{c}{4\pi} G^0 = -\frac{c}{4\pi} \gamma (G_0^0 + \beta G_0^1) \end{aligned}$$

$$\begin{aligned} \text{And } \frac{1}{4\pi} G_0^0 &= -c^{-1} \int dv_0 [\eta_0(v_0) - \chi_0(v_0) J_0(v_0)] \\ \frac{1}{4\pi} G_0^1 &= -c^{-1} \int dv_0 [-\chi_0(v_0) + H_0(v_0)] \end{aligned}$$

hence

$$\begin{aligned} \frac{c}{4\pi} G_0^0 &= - \int dv_0 [\eta_0(v_0) - \chi_0(v_0) J_0(v_0)] \\ \frac{c}{4\pi} G_0^1 &= + \int \chi_0(v_0) H_0(v_0) dv_0 \end{aligned}$$

$$-\frac{c}{4\pi} G^0 = +\gamma \int dv_0 [\eta_0(v_0) - \chi_0(v_0) J_0(v_0)] - \gamma\beta \int \chi_0(v_0) H_0(v_0) dv_0$$

We now have

$$\begin{aligned} & \frac{\gamma}{c} \left[ \left( \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right) + \beta \left( \frac{\partial H_0}{\partial t} + \beta \frac{\partial K_0}{\partial t} \right) \right] + \gamma \left[ \left( \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right) + \beta \left( \frac{\partial K_0}{\partial r} + \beta \frac{\partial H_0}{\partial r} \right) \right] \\ & + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} \left\{ 2\beta J_0 + 4\beta^2 H_0 + 2\beta^3 K_0 + 2(1-\beta^2) H_0 + 2\beta(1-\beta^2) K_0 \right\} \\ & + \gamma^3 \frac{\partial \beta}{\partial r} \left\{ 2\beta(1+\beta^2) H_0 + 2\beta^2 J_0 + 2\beta^3 K_0 + 2\beta(1-\beta^2) H_0 + (1-\beta^2) J_0 + (1-\beta^2) K_0 \right\} \\ & + \frac{\gamma}{r} \left\{ 2H_0 + 2\beta^2 H_0 + 2\beta J_0 + 2\beta K_0 \right\} = \int dv_0 [\eta_0(v_0) - \chi_0(v_0) J_0(v_0)] - \beta \int \chi_0(v_0) H_0(v_0) dv_0 \end{aligned}$$

$$\begin{aligned}
& \frac{\gamma}{c} \left[ \left( \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right) + \beta \left( \frac{\partial H_0}{\partial t} + \beta \frac{\partial K_0}{\partial t} \right) \right] + \gamma \left[ \left( \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right) + \beta \left( \frac{\partial K_0}{\partial r} + \beta \frac{\partial H_0}{\partial r} \right) \right] \\
& + \frac{\gamma}{r} \left[ (2H_0 + 3\beta J_0 - \beta K_0) + (-\beta J_0 + 2\beta^2 H_0 + 3\beta K_0) \right] \\
& + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} \left[ \underbrace{2\beta J_0 + 2\beta^2 H_0 + 2H_0 + 2\beta K_0}_{(2H_0 + \beta J_0 + \beta K_0) + 3(2\beta H_0 + J_0 + K_0)} \right] + \gamma^3 \frac{\partial \beta}{\partial r} \left[ \underbrace{4\beta H_0 + J_0 + K_0 + \beta^2 J_0 + \beta^2 K_0}_{(J_0 + K_0 + 2\beta H_0) + \beta(2H_0 + \beta J_0 + \beta K_0)} \right] \\
& = \frac{\gamma}{c} \left[ \left( \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right) + \beta \left( \frac{\partial H_0}{\partial t} + \beta \frac{\partial K_0}{\partial t} \right) \right] + \gamma \left[ \left( \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right) + \beta \left( \frac{\partial K_0}{\partial r} + \beta \frac{\partial H_0}{\partial r} \right) \right] \\
& + \frac{\gamma}{r} \left[ (2H_0 + 3\beta J_0 - \beta K_0) + \beta (-J_0 + K_0 + 2\beta H_0) \right] + \frac{\gamma^3}{c} \frac{\partial \beta}{\partial t} \left[ (2H_0 + \beta J_0 + \beta K_0) + \beta (H_0 + K_0 + 2\beta H_0) \right] \\
& + \gamma^3 \frac{\partial \beta}{\partial r} \left[ (J_0 + K_0 + 2\beta H_0) + \beta (2H_0 + \beta J_0 + \beta K_0) \right] = \int dV_0 (\eta_0(v_0) - \chi_0(v_0) \mathcal{L}(v_0)) - \beta \int dV_0 \chi_0(v_0) H_0
\end{aligned}$$

In each bracket the 1st parentheses contains the appropriate term from eqn (95.13) and the second parentheses, which is multiplied by  $\beta$ , contains the term from (95.14).

Similarly for (95.16)

$$c^{-1} \partial H / \partial t + \partial K / \partial r + (3K - J) / r = -(c/4\pi) G'$$

becomes

$$\begin{aligned}
& c^{-1} \frac{\partial}{\partial t} \left\{ \gamma^2 [(1 + \beta^2) H_0 + \beta J_0 + \beta K_0] \right\} + \frac{\partial}{\partial r} \left\{ \gamma^2 [K_0 + 2\beta H_0 + \beta^2 J_0] \right\} \\
& + \frac{1}{r} \left\{ 3\gamma^2 (K_0 + 2\beta H_0 + \beta^2 J_0) - \gamma^2 (J_0 + 2\beta H_0 + \beta^2 K_0) \right\} = -\frac{c}{4\pi} \gamma (G'_0 + \beta G''_0)
\end{aligned}$$

$\Rightarrow$

$$\begin{aligned}
& \gamma c^{-1} \left\{ \frac{\partial H_0}{\partial t} + \beta^2 \frac{\partial H_0}{\partial t} + \beta \frac{\partial J_0}{\partial t} + \beta \frac{\partial K_0}{\partial t} \right\} + \gamma c^{-1} \frac{\partial \beta}{\partial t} \left\{ 2\gamma^2 \beta [H_0 + \beta^2 H_0 + \beta J_0 + \beta K_0] + 2\beta H_0 + J_0 + K_0 \right\} \\
& + \gamma \left\{ \frac{\partial K_0}{\partial r} + 2\beta \frac{\partial H_0}{\partial r} + \beta^2 \frac{\partial J_0}{\partial r} \right\} + \gamma \frac{\partial \beta}{\partial r} \left\{ 2\gamma^2 \beta [K_0 + 2\beta H_0 + \beta^2 J_0] + 2H_0 + 2\beta J_0 \right\} \\
& + \frac{\gamma^2}{r} \left\{ (3 - \beta^2) K_0 + 4\beta H_0 + (3\beta^2 - 1) J_0 \right\} = -\int \chi_0 H_0 dV_0 + \beta \int (\eta_0 - \chi_0 J_0) dV_0
\end{aligned}$$

$$\begin{aligned}
\text{now } 2\gamma^2 \beta [H_0 + \beta^2 H_0 + \beta J_0 + \beta K_0] + 2\beta H_0 + J_0 + K_0 &= \gamma^2 \{ 2\beta H_0 + 2\beta^3 H_0 + 2\beta^2 J_0 + 2\beta^2 K_0 + 2(1 - \beta^2)\beta H_0 + (1 - \beta^2)J_0 + H_0 \} \\
&= \gamma^2 \{ 2\beta H_0 + 2\beta^3 H_0 + 2\beta^2 J_0 + 2\beta^2 K_0 + 2\beta H_0 - 2\beta^3 H_0 + J_0 + K_0 - \beta^2 J_0 - \beta^2 K_0 \} = \gamma^2 \{ J_0 + K_0 + 4\beta H_0 + \beta^2 J_0 + \beta^2 K_0 \}
\end{aligned}$$

$$\text{and } 2\gamma^2\beta(K_0 + 2\beta H_0 + \beta^2 J_0) + 2H_0 + 2\beta J_0 = \gamma^2 \{ 2\beta K_0 + 4\beta^2 H_0 + 2\beta^3 J_0 + (1-\beta^2)(2H_0 + 2\beta J_0) \}$$

$$= \gamma^2 \{ 2\beta K_0 + 4\beta^2 H_0 + 2\beta^3 J_0 + 2H_0 + 2\beta J_0 - 2\beta^2 H_0 - 2\beta^3 J_0 \} = \gamma^2 \{ 2H_0 + 2\beta J_0 + 2\beta K_0 + 2\beta^2 H_0 \}$$

Finally, we can also write these results:

$$\gamma^2 (J_0 + K_0 + 4\beta H_0 + \beta^2 J_0 + \beta^2 K_0) = \gamma^2 \{ (J_0 + K_0 + 2\beta H_0) + \beta(2H_0 + \beta J_0 + \beta K_0) \}$$

$$\text{and } \gamma^2 (2H_0 + 2\beta J_0 + 2\beta K_0 + 2\beta^2 H_0) = \gamma^2 \{ (2H_0 + \beta J_0 + \beta K_0) + \beta(J_0 + K_0 + 2\beta H_0) \}$$

We also find

$$\frac{\gamma^2}{\gamma} \{ (3-\beta^2)K_0 + 4\beta H_0 + (3\beta^2-1)J_0 \} = \frac{\gamma}{\gamma} \{ 3K_0 - J_0 + 4\beta H_0 - \beta^2 K_0 + 3\beta^2 J_0 \}$$

$$= \frac{\gamma}{\gamma} \{ (3K_0 - J_0 + 2\beta H_0) + \beta(2H_0 + 3\beta J_0 - \beta K_0) \}$$

Hence the entire equation becomes:

$$c^{-1} \left\{ \left( \frac{\partial H_0}{\partial t} + \beta \frac{\partial K_0}{\partial t} \right) + \beta \left( \frac{\partial J_0}{\partial t} + \beta \frac{\partial H_0}{\partial t} \right) \right\} + c^{-1} \gamma^3 \frac{\partial \beta}{\partial t} \left\{ (J_0 + K_0 + 2\beta H_0) + \beta(2H_0 + \beta J_0 + \beta K_0) \right\}$$

$$+ \left\{ \left( \frac{\partial K_0}{\partial r} + \beta \frac{\partial H_0}{\partial r} \right) + \beta \left( \frac{\partial H_0}{\partial r} + \beta \frac{\partial J_0}{\partial r} \right) \right\} + \gamma^3 \frac{\partial \beta}{\partial r} \left\{ (2H_0 + \beta J_0 + \beta K_0) + \beta(J_0 + K_0 + 2\beta H_0) \right\}$$

$$+ \frac{\gamma}{\gamma} \left\{ (3K_0 - J_0 + 2\beta H_0) + \beta(2H_0 + 3\beta J_0 - \beta K_0) \right\} = - \int \lambda_0 H_0 dv_0 + \int (\eta_0 - \lambda_0 J_0) dv_0$$

which is exactly (95.14) +  $\beta$  times (95.13),

Equation (95.9) to 1st order in  $(v/c)$  becomes:

$$\frac{1}{c} \frac{\partial I_0}{\partial t} + (\mu_0 + \beta) \frac{\partial I_0}{\partial r} + (1-\mu_0^2) \left\{ r' (1+\beta\mu_0) - c^{-1} \frac{\partial \beta}{\partial t} - (\mu_0 \frac{\partial \beta}{\partial r}) \right\} \frac{\partial I_0}{\partial \mu_0}$$

$$- \left\{ r' (1-\mu_0^2) \beta + c^{-1} \mu_0 \frac{\partial \beta}{\partial t} + \mu_0^2 \frac{\partial \beta}{\partial r} \right\} \nu_0 \frac{\partial I_0}{\partial \nu_0} + 3 \left\{ r' (1-\mu_0^2) \beta + \mu_0 c^{-1} \frac{\partial \beta}{\partial t} + \mu_0^2 \frac{\partial \beta}{\partial r} \right\} I_0$$

$$= \eta_0 - \lambda_0 I_0$$

or

$$c^{-1} \left\{ \frac{\partial I_0}{\partial t} + v \frac{\partial I_0}{\partial r} \right\} + \mu_0 \frac{\partial I_0}{\partial r} + (1-\mu_0^2) \left\{ \frac{1}{r} + (\mu_0/c) [v/r - \partial v/\partial r] - a/c^2 \right\} \frac{\partial I_0}{\partial \mu_0}$$

$$- c^{-1} \left\{ (1-\mu_0^2) v/r + \mu_0^2 \partial v/\partial r + \mu_0 a/c^2 \right\} \nu_0 \frac{\partial I_0}{\partial \nu_0} + 3 \left\{ (1-\mu_0^2) v/r + \mu_0^2 \partial v/\partial r + \mu_0 a/c^2 \right\} I_0$$

$$= \eta_0 - \lambda_0 I_0$$

$$\Rightarrow \frac{1}{c} \frac{DI_0}{Dt} + \mu_0 \frac{\partial I_0}{\partial r} + (1-\mu_0^2) \left\{ \frac{1}{r} + \frac{\mu_0}{c} \left( \frac{v}{r} - \frac{\partial v}{\partial r} \right) - \frac{a}{c^2} \right\} \frac{\partial I_0}{\partial \mu_0} - \frac{1}{c} \left\{ (1-\mu_0^2) \frac{v}{r} + \mu_0^2 \frac{\partial v}{\partial r} + \frac{\mu_0 a}{c} \right\} \nu_0 \frac{\partial I_0}{\partial \nu_0}$$

$$(95.17) \quad + \frac{3}{c} \left\{ (1-\mu_0^2) \frac{v}{r} + \mu_0^2 \frac{\partial v}{\partial r} + \frac{\mu_0 a}{c} \right\} I_0 = \eta_0 - \lambda_0 I_0$$

which is (95.17) written slightly differently than in the text.

Equation (95.10) to 1st order in  $v/c$  is

$$c \left\{ \frac{\partial J_0}{\partial t} + \frac{v}{c} \frac{\partial H_0}{\partial t} \right\} + \left\{ \frac{\partial H_0}{\partial r} + \frac{v}{c} \frac{\partial J_0}{\partial r} \right\} - \gamma_0 \left\{ \frac{v}{rc} \left[ \frac{\partial J_0}{\partial v_0} - \frac{\partial K_0}{\partial v_0} \right] + \frac{a}{c^2} \left[ \frac{\partial H_0}{\partial v_0} \right] + \frac{1}{c} \frac{\partial v}{\partial r} \frac{\partial K_0}{\partial v_0} \right\} \\ + \left\{ \frac{2}{r} \left[ H_0 + \frac{v}{c} J_0 \right] + \frac{a}{c^2} H_0 + \frac{1}{c} \frac{\partial v}{\partial r} J_0 \right\} = \eta_0 - \chi_0 \bar{J}_0$$

or

$$\frac{1}{c} \frac{DJ_0}{Dt} + \frac{\partial H_0}{\partial r} - \frac{\gamma_0}{c} \left\{ \frac{v}{r} \frac{\partial J_0}{\partial v_0} - \left( \frac{v}{r} - \frac{\partial v}{\partial r} \right) \frac{\partial K_0}{\partial v_0} + \frac{a}{c} \frac{\partial H_0}{\partial v_0} \right\} + \left\{ \left( \frac{2v}{r} + \frac{\partial v}{\partial r} \right) \frac{J_0}{c} + \left( \frac{2}{r} + \frac{a}{c^2} \right) H_0 \right\}$$

$$= \frac{1}{c} \frac{\partial J_0}{\partial t} + \frac{\partial H_0}{\partial r} + \frac{2H_0}{r} + \left( \frac{2v}{r} + \frac{\partial v}{\partial r} \right) \frac{J_0}{c} - \frac{\gamma_0}{c} \left\{ \frac{v}{r} \frac{\partial J_0}{\partial v_0} - \left( \frac{v}{r} - \frac{\partial v}{\partial r} \right) \frac{\partial K_0}{\partial v_0} + \frac{a}{c} \frac{\partial H_0}{\partial v_0} \right\} = \eta_0 - \chi_0 J_0 \\ + \frac{a}{c^2} H_0$$

(95.18)

$$= \frac{1}{c} \frac{\partial J_0}{\partial t} + \frac{\partial H_0}{\partial r} + \frac{2H_0}{r} + \left( \frac{2v}{r} + \frac{\partial v}{\partial r} \right) \frac{J_0}{c} + \frac{a}{c^2} H_0 - \frac{\gamma_0}{c} \left\{ \frac{v}{r} \frac{\partial J_0}{\partial v_0} - \left( \frac{v}{r} - \frac{\partial v}{\partial r} \right) \frac{\partial K_0}{\partial v_0} + \frac{a}{c} \frac{\partial H_0}{\partial v_0} \right\} = \eta_0 - \chi_0 J_0$$

And (95.12) becomes

$$\frac{1}{c} \frac{\partial H_0}{\partial t} + \frac{\partial K_0}{\partial r} + \frac{v}{c} \frac{\partial H_0}{\partial r} - \frac{\gamma_0}{c} \left\{ \frac{v}{r} \left( \frac{\partial H_0}{\partial v_0} - \frac{\partial N_0}{\partial v_0} \right) + \frac{a}{c} \frac{\partial K_0}{\partial v_0} + \frac{\partial v}{\partial r} \frac{\partial N_0}{\partial v_0} \right\} + \left\{ \frac{1}{r} (3K_0 - J_0) + \frac{v}{cr} (H_0 + N_0) \right\} \\ + \frac{a}{c^2} \left[ J_0 \right] + \frac{1}{c} \frac{\partial v}{\partial r} (2H_0 - N_0) = -\chi_0 H_0$$

$$\frac{1}{c} \left( \frac{\partial H_0}{\partial t} + v \frac{\partial H_0}{\partial r} \right) + \frac{\partial K_0}{\partial r} + \frac{1}{r} (3K_0 - J_0) + \frac{1}{c} \left( \frac{v}{r} + \frac{\partial v}{\partial r} \right) H_0 + \frac{1}{c} \left( \frac{v}{r} - \frac{\partial v}{\partial r} \right) N_0 + \frac{a}{c^2} J_0$$

$$- \frac{\gamma_0}{c} \left\{ \frac{v}{r} \frac{\partial H_0}{\partial v_0} - \left( \frac{v}{r} - \frac{\partial v}{\partial r} \right) \frac{\partial N_0}{\partial v_0} + \frac{a}{c} \frac{\partial K_0}{\partial v_0} \right\} = -\chi_0 H_0$$

(95.19)

$$\frac{1}{c} \frac{DH_0}{Dt} + \frac{\partial K_0}{\partial r} + \frac{1}{r} (3K_0 - J_0) + \frac{1}{c} \left( \frac{v}{r} + \frac{\partial v}{\partial r} \right) H_0 + \frac{1}{c} \left( \frac{v}{r} - \frac{\partial v}{\partial r} \right) N_0 + \frac{a}{c^2} J_0$$

$$- \frac{\gamma_0}{c} \left\{ \frac{v}{r} \frac{\partial H_0}{\partial v_0} - \left( \frac{v}{r} - \frac{\partial v}{\partial r} \right) \frac{\partial N_0}{\partial v_0} + \frac{a}{c} \frac{\partial K_0}{\partial v_0} \right\} = -\chi_0 H_0$$

Further, the integrated moment eqns become (95.13):

$$\frac{1}{c} \left( \frac{\partial J_0}{\partial t} + \frac{v}{c} \frac{\partial H_0}{\partial t} \right) + \frac{\partial H_0}{\partial r} + \frac{v}{c} \frac{\partial J_0}{\partial r} + \left\{ \frac{1}{r} \left( 2H_0 + 3 \frac{v}{c} J_0 - \frac{v}{c} K_0 \right) + \frac{a}{c^2} (2H_0) + \frac{1}{c} \frac{\partial v}{\partial r} (J_0 + K_0) \right\} \\ = \int (\eta_0 - \chi_0 J_0) dv_0$$

or

$$\frac{1}{c} \frac{DJ_0}{Dt} + \frac{\partial H_0}{\partial r} + \frac{2H_0}{r} + \frac{1}{c} \left( \frac{3v}{r} + \frac{\partial v}{\partial r} \right) J_0 + \frac{1}{c} \left( \frac{\partial v}{\partial r} - \frac{v}{r} \right) K_0 + \frac{2a}{c^2} H_0 = \int (\eta_0 - \chi_0 J_0) dv_0$$

(95.20)

$$\frac{1}{c} \frac{DJ_0}{Dt} + \frac{\partial H_0}{\partial r} + \frac{2H_0}{r} + \frac{\partial v}{cr} (3J_0 - K_0) + \frac{1}{c} \frac{\partial v}{\partial r} (J_0 + K_0) + \frac{2a}{c^2} H_0 = \int dv_0 (\eta_0 - \chi_0 J_0)$$

And (15.14) becomes:

$$\frac{1}{c} \left( \frac{\partial H_0}{\partial t} \right) + \left( \frac{\partial K_0}{\partial r} + \frac{v}{c} \frac{\partial H_0}{\partial r} \right) + \frac{1}{r} (3K_0 - J_0 + \frac{2v}{c} H_0) + \frac{a}{c^2} (J_0 + K_0) + \frac{1}{c} \frac{\partial v}{\partial r} (2H_0) = - \int x_0 H_0 dv_0$$

$$\Rightarrow \frac{1}{c} \frac{DH_0}{Dt} + \frac{\partial K_0}{\partial r} + \frac{2v}{c} \frac{H_0}{r} + \frac{1}{r} (3K_0 - J_0) + \frac{2 \partial v}{c \partial r} H_0 + \frac{a}{c^2} (J_0 + K_0) = - \int x_0 H_0 dv_0$$

$$\text{or} \\ (95.21) \quad \frac{1}{c} \frac{\partial H_0}{\partial t} + \frac{\partial K_0}{\partial r} + \left( \frac{v}{r} + \frac{\partial v}{\partial r} \right) \frac{2H_0}{c} + \frac{1}{r} (3K_0 - J_0) + \frac{a}{c^2} (J_0 + K_0) = - \int x_0 H_0 dv_0$$

Consistency of inertial frame & co-moving frame equals to  $O(v/c)$  in grey, LTE, nonscattering planar medium; with no acceleration terms:

$$(95.20) \rightarrow \\ \frac{1}{c} \left( \frac{\partial J_0}{\partial t} + v \frac{\partial J_0}{\partial z} \right) + \frac{\partial H_0}{\partial z} + \frac{1}{c} \frac{\partial v}{\partial z} (J_0 + K_0) = \int dv_0 (\eta_0 - x_0 J_0) = x_0 (B_0 - J_0)$$

Now take (93.10)

$$\frac{\partial E}{\partial t} + \frac{\partial F}{\partial z} = x (4\pi B - cE) + \frac{x}{c} VF \Rightarrow \frac{4\pi}{c} \frac{\partial J}{\partial t} + 4\pi \frac{\partial H}{\partial z} = x_0 (4\pi B_0 - c \frac{4\pi}{c} J) - \frac{4\pi v}{c} 4\pi H$$

$$\text{or} \\ \frac{1}{c} \frac{\partial J}{\partial t} + \frac{\partial H}{\partial z} = x_0 (B_0 - J) + \frac{xv}{c} H$$

$$\Rightarrow \frac{1}{c} \frac{\partial}{\partial t} [J_0 + 2\beta H_0] + \frac{\partial}{\partial z} [H_0 + \beta (J_0 + K_0)] = x_0 [B_0 - (J_0 + 2\beta H_0)] + \frac{x_0 v}{c} [H_0 + \beta (J_0 + K_0)]$$

$$= \frac{1}{c} \frac{\partial J_0}{\partial t} + \frac{2v}{c^2} \frac{\partial H_0}{\partial t} + \frac{2a}{c^2} H_0 + \frac{\partial H_0}{\partial z} + \frac{1}{c} \frac{\partial v}{\partial z} (J_0 + K_0) + \beta \left( \frac{\partial J_0}{\partial z} + \frac{\partial K_0}{\partial z} \right) = x_0 (B_0 - J_0 - 2\beta H_0) + (x_0 v/c) H_0$$

$$\frac{1}{c} \left( \frac{\partial J_0}{\partial t} + v \frac{\partial J_0}{\partial z} \right) + \frac{\partial H_0}{\partial z} + \frac{2a}{c^2} H_0 + \frac{v}{c} \left( \frac{\partial J_0}{\partial z} + \frac{\partial K_0}{\partial z} \right) + \frac{1}{c} \frac{\partial v}{\partial z} (J_0 + K_0) = x_0 (B_0 - J_0 - \beta H_0)$$

$$\Rightarrow \frac{1}{c} \frac{DJ_0}{Dt} + \frac{\partial H_0}{\partial z} + \frac{1}{c} \frac{\partial v}{\partial z} (J_0 + K_0) + \frac{v}{c} \left( \frac{\partial J_0}{\partial z} + \frac{\partial K_0}{\partial z} \right) + x_0 \beta H_0 = x_0 (B_0 - J_0)$$

$$\text{or} \quad \frac{1}{c} \frac{DJ_0}{Dt} + \frac{\partial H_0}{\partial z} + \frac{1}{c} \frac{\partial v}{\partial z} (J_0 + K_0) = x_0 (B_0 - J_0) - \left[ x_0 \beta H_0 + \frac{v}{c} \left( \frac{\partial J_0}{\partial z} + \frac{\partial K_0}{\partial z} \right) \right] \\ = x_0 (B_0 - J_0) - \beta [x_0 H_0 + \partial K_0 / \partial z]$$

But from (95.21)

$$-x_0 H_0 - \frac{\partial K_0}{\partial z} \approx \frac{1}{c} \frac{\partial H_0}{\partial t} + \frac{v}{c} \left\{ \frac{\partial H_0}{\partial t} \right\} + \frac{2}{c} \frac{\partial v}{\partial z} H_0 = O(v/c)$$

Hence  $\frac{v}{c} [\alpha_0 H_0 + \partial k_0 / \partial z] = \frac{v}{c} \times \alpha (\frac{v}{c}) = \alpha (v^2/c^2)$   
 and

$$\frac{1}{c} \frac{D J_0}{D t} + \frac{\partial H_0}{\partial z} + \frac{1}{c} \frac{\partial v}{\partial z} (J_0 + K_0) = \alpha_0 (B_0 - J_0) - \alpha (v^2/c^2)$$

Conversely, starting with (95, 21):

$$\frac{1}{c} \frac{\partial H_0}{\partial t} + \frac{\partial K_0}{\partial z} + \frac{v}{c} \frac{\partial H_0}{\partial z} + \frac{z}{c} \frac{\partial v}{\partial z} H_0 = -\alpha_0 H_0$$

and (93, 11)

$$c^2 \partial F / \partial t + \partial P / \partial z = -(\alpha_0/c) F + (\alpha_0 v/c) (4\pi B_0) + \alpha_0 v P$$

$$\Rightarrow c^2 \frac{\partial}{\partial t} (4\pi H) + \frac{\partial}{\partial z} (4\pi K) = -\frac{\alpha_0}{c} (4\pi H) + \frac{\alpha_0 v}{c} (4\pi B) + \alpha_0 v \frac{\partial}{\partial z} (4\pi K)$$

$$\Rightarrow \frac{1}{c} \frac{\partial H}{\partial t} + \frac{\partial K}{\partial z} = -\alpha_0 H + \frac{\alpha_0 v}{c} B + \frac{\alpha_0 v K}{c} = -\alpha_0 H + (\alpha_0 v/c) B_0 + (\alpha_0 v/c) K$$

and thus

$$\frac{1}{c} \frac{\partial}{\partial t} [H_0 + \beta (J_0 + K_0)] + \frac{\partial}{\partial z} [K_0 + 2\beta H_0] = -\alpha_0 [H_0 + \beta (J_0 + K_0)] + \frac{\alpha_0 v}{c} (B_0 + K_0 + 2\beta H_0)$$

$$\left( \frac{1}{c} \frac{\partial H_0}{\partial t} + \frac{v}{c} \frac{\partial H_0}{\partial z} \right) + \frac{\partial K_0}{\partial z} + \frac{v}{c} \frac{\partial H_0}{\partial z} + \frac{z}{c} \frac{\partial v}{\partial z} H_0 = -\alpha_0 H_0 + \alpha_0 \frac{v}{c} (J_0 + K_0) + \alpha_0 \frac{v}{c} (B_0 + K_0) \\ = -\alpha_0 H_0 + \alpha_0 \frac{v}{c} (B_0 - J_0)$$

$$\frac{1}{c} \frac{D H_0}{D t} + \frac{\partial K_0}{\partial z} + \frac{v}{c} \frac{\partial H_0}{\partial z} + \frac{z}{c} \frac{\partial v}{\partial z} H_0 = -\alpha_0 H_0 + \alpha_0 \frac{v}{c} (B_0 - J_0) - \frac{v}{c} \frac{\partial H_0}{\partial z}$$

### Noninertial Frame Formulation (LH Thomas + J. Castor)

Start with photon Boltzmann eqn (§ 92)

$$(95.30) \quad m^\alpha \frac{\partial \mathcal{J}}{\partial x^\alpha} + \dot{m}^\alpha \frac{\partial \mathcal{J}}{\partial m^\alpha} = e - a \mathcal{J} = \frac{\delta \mathcal{J}}{\delta \lambda} \Big|_{\text{cell}}$$

and take

$$\dot{m}^\alpha = \frac{dm^\alpha}{d\lambda} \quad \text{where } \lambda \text{ satisfies } p^\alpha (=m^\alpha) = \frac{dx^\alpha}{d\lambda}$$

The intrinsic derivative  $\frac{\delta m^\alpha}{\delta \lambda} \equiv 0$  along photon trajectory

$$\frac{\delta m^\alpha}{\delta \lambda} = \frac{dm^\alpha}{d\lambda} + \left\{ \begin{matrix} \alpha \\ \beta \gamma \end{matrix} \right\} m^\beta \frac{dx^\gamma}{d\lambda} = 0$$

Now change indices and write:

$$\frac{\delta m^\beta}{\delta \lambda} = \frac{dm^\beta}{d\lambda} + \left\{ \begin{matrix} \beta \\ \alpha \gamma \end{matrix} \right\} m^\alpha \frac{dx^\gamma}{d\lambda} = \frac{\partial m^\beta}{\partial x^\alpha} \frac{dx^\alpha}{d\lambda} + \left\{ \begin{matrix} \beta \\ \alpha \gamma \end{matrix} \right\} m^\alpha \frac{dx^\gamma}{d\lambda}$$

now  $(dx^\alpha/d\lambda) = m^\alpha$  and  $m^\beta = \epsilon_\beta^c m^c \Rightarrow$

$$\frac{\delta m^\beta}{\delta \lambda} = m^\alpha \left[ \frac{\partial}{\partial x^\alpha} (\epsilon_\beta^c m^c) + \left\{ \begin{matrix} \beta \\ \alpha \gamma \end{matrix} \right\} m^\gamma \right] = m^\alpha \left[ \epsilon_{c,\alpha}^\beta m^c + \epsilon_\beta^c \frac{\partial m^c}{\partial x^\alpha} + \left\{ \begin{matrix} \beta \\ \alpha \gamma \end{matrix} \right\} m^\gamma \right]$$

$$= m^\alpha m^c \left[ \epsilon_{c,\alpha}^\beta + \left\{ \begin{matrix} \beta \\ \alpha \gamma \end{matrix} \right\} \epsilon_\beta^c \right] + \epsilon_\beta^c m^\alpha \frac{\partial m^c}{\partial x^\alpha}$$

$$= m^a m^c \epsilon_a^\alpha \left[ \epsilon_{c,\alpha}^\beta + \left\{ \begin{matrix} \beta \\ \alpha \gamma \end{matrix} \right\} \epsilon_\beta^c \right] + \epsilon_\beta^c \frac{dm^c}{d\lambda} = 0$$

now solve for last term:

$$\epsilon_\beta^c \frac{dm^c}{d\lambda} = -m^a m^c \epsilon_a^\alpha \left[ \epsilon_{c,\alpha}^\beta + \left\{ \begin{matrix} \beta \\ \alpha \gamma \end{matrix} \right\} \epsilon_\beta^c \right] = -m^a m^c \epsilon_a^\alpha \epsilon_{c;\alpha}^\beta$$

multiply by  $\frac{d\lambda}{d\lambda} \epsilon_\beta^b$  to get

$$\epsilon_\beta^b \epsilon_\beta^c \frac{dm^c}{d\lambda} = \delta_\beta^c \frac{dm^c}{d\lambda} = \frac{dm^b}{d\lambda} = -m^a m^c \left( \epsilon_\beta^b \epsilon_a^\alpha \epsilon_{c;\alpha}^\beta \right)$$

Define the Pfaffian derivative  $\partial_a \equiv \epsilon_a^\alpha (\partial/\partial x^\alpha)$

and Ricci rotation coefficient  $\Gamma_{ac}^b = \epsilon_a^\alpha \epsilon_\beta^b \epsilon_{c;\alpha}^\beta$

The transfer eqn becomes:

~~$$m^a \frac{\partial \mathcal{J}}{\partial x^\alpha} = m^a \epsilon_a^\alpha \frac{\partial \mathcal{J}}{\partial x^\alpha} + \frac{\partial m^b}{d\lambda} \frac{\partial \mathcal{J}}{\partial m^b} = m^a \frac{\partial \mathcal{J}}{\partial x^\alpha} + \frac{\partial m^b}{d\lambda} \frac{\partial \mathcal{J}}{\partial m^b}$$~~

$$m^a \frac{D}{Dx^\alpha} [\mathcal{J}(x^\alpha, m^a)] = \frac{\delta \mathcal{J}}{\delta \lambda} \Big|_{\text{cell}} = \frac{\partial \mathcal{J}}{\partial x^\alpha} \frac{dx^\alpha}{d\lambda} + \frac{\partial \mathcal{J}}{\partial m^b} \frac{dm^b}{d\lambda}$$

$$= m^a \epsilon_a^\alpha \frac{\partial \mathcal{J}}{\partial x^\alpha} + \frac{\partial \mathcal{J}}{\partial m^b} \frac{dm^b}{d\lambda} = m^a \partial_a \mathcal{J} + \frac{\partial \mathcal{J}}{\partial m^b} (-m^a m^c \Gamma_{ac}^b)$$

$$= m^a \left[ \partial_a \mathcal{J} - m^c \Gamma_{ac}^b \frac{\partial \mathcal{J}}{\partial m^b} \right]$$

$$(95.44) \quad = m^a \left[ \partial_a - m^c \Gamma_{ac}^b \frac{\partial}{\partial m^b} \right] \mathcal{J} = e - a \mathcal{J}$$

$$ds^2 = e^{-2\Phi} dt^2 + e^{2\Lambda} dr^2 + R^2 d\theta^2 + R^2 \sin^2\theta d\phi^2$$

$$g_{00} = -\exp(+2\Phi) \quad g_{11} = \exp(2\Lambda) \quad g_{22} = R^2 \quad g_{33} = R^2 \sin^2\theta$$

Non-zero elements

$$\left\{ \begin{matrix} i \\ i \end{matrix} \right\} = \frac{1}{2g_{ii}} \frac{\partial g_{ii}}{\partial x^i} \quad \left\{ \begin{matrix} i \\ j \end{matrix} \right\} = \frac{1}{2g_{ii}} \frac{\partial g_{ii}}{\partial x^j} \quad \left\{ \begin{matrix} i \\ j \end{matrix} \right\} = -\frac{1}{2g_{ii}} \frac{\partial g_{jj}}{\partial x^i}$$

Thus

95.46)

$$\left\{ \begin{matrix} 0 \\ 0 \end{matrix} \right\} = \frac{1}{2g_{00}} \frac{\partial g_{00}}{\partial t} = \frac{1}{2g_{00}} \left( +2 \frac{\partial \Phi}{\partial t} \right) g_{00} = + \frac{\partial \Phi}{\partial t}$$

$$\left\{ \begin{matrix} 0 \\ 1 \end{matrix} \right\} = \frac{1}{2g_{00}} \frac{\partial g_{00}}{\partial r} = \frac{1}{2g_{00}} \left( 2 \frac{\partial \Phi}{\partial r} \right) g_{00} = \frac{\partial \Phi}{\partial r}$$

$$\left\{ \begin{matrix} 0 \\ 1 \end{matrix} \right\} = -\frac{1}{2g_{11}} \frac{\partial g_{11}}{\partial t} = -\frac{1}{2[-\exp(2\Lambda)]} \cdot 2 \frac{\partial \Lambda}{\partial t} e^{2\Lambda} = \exp[2(\Lambda - \Phi)] \frac{\partial \Lambda}{\partial t}$$

$$\left\{ \begin{matrix} 1 \\ 0 \end{matrix} \right\} = -\frac{1}{2g_{11}} \frac{\partial g_{00}}{\partial r} = -\frac{1}{2 \exp[2\Lambda]} \left( +2 \frac{\partial \Phi}{\partial r} \right) \exp(+2\Phi) = + \exp[-2(\Lambda + \Phi)] \frac{\partial \Phi}{\partial r}$$

$$\left\{ \begin{matrix} 1 \\ 0 \end{matrix} \right\} = \frac{1}{2g_{11}} \frac{\partial g_{11}}{\partial t} = \frac{1}{2g_{11}} \left( 2 \frac{\partial \Lambda}{\partial t} \right) g_{11} = \frac{\partial \Lambda}{\partial t}$$

$$\left\{ \begin{matrix} 1 \\ 1 \end{matrix} \right\} = \frac{1}{2g_{11}} \frac{\partial g_{11}}{\partial r} = \frac{1}{2g_{11}} \left( 2 \frac{\partial \Lambda}{\partial r} \right) g_{11} = \frac{\partial \Lambda}{\partial r}$$

$$\left\{ \begin{matrix} 0 \\ 2 \end{matrix} \right\} = -\frac{1}{2g_{00}} \frac{\partial g_{22}}{\partial t} = + \frac{\exp(+2\Phi)}{2} 2R \frac{\partial R}{\partial t} = + \exp(+2\Phi) R \frac{\partial R}{\partial t} = + \exp(-2\Phi) R \frac{\partial R}{\partial t}$$

$$\left\{ \begin{matrix} 2 \\ 0 \end{matrix} \right\} = \frac{1}{2g_{22}} \frac{\partial g_{22}}{\partial t} = \frac{1}{2R^2} 2R \frac{\partial R}{\partial t} = \frac{1}{R} \frac{\partial R}{\partial t}$$

$$\left\{ \begin{matrix} 1 \\ 2 \end{matrix} \right\} = -\frac{1}{2g_{11}} \frac{\partial g_{22}}{\partial r} = -\frac{1}{2 \exp(2\Lambda)} \cdot 2R \frac{\partial R}{\partial r} = - \exp(-2\Lambda) R \frac{\partial R}{\partial r}$$

$$\left\{ \begin{matrix} 2 \\ 1 \end{matrix} \right\} = (2g_{22})^{-1} \partial g_{22} / \partial r = (2R^2)^{-1} \partial (R^2) / \partial r = R^{-1} \partial R / \partial r$$

$$\left\{ \begin{matrix} 0 \\ 3 \end{matrix} \right\} = -\frac{1}{2g_{00}} \frac{\partial g_{33}}{\partial t} = -\frac{1}{2g_{00}} \sin^2\theta \cdot 2R \frac{\partial R}{\partial t} = + \exp(-2\Phi) \sin^2\theta R \frac{\partial R}{\partial t}$$

$$\left\{ \begin{matrix} 3 \\ 0 \end{matrix} \right\} = \frac{1}{2g_{33}} \frac{\partial g_{33}}{\partial t} = \frac{1}{2R^2 \sin^2\theta} \cdot \sin^2\theta \cdot 2R \frac{\partial R}{\partial t} = \frac{1}{R} \frac{\partial R}{\partial t}$$

$$\left\{ \begin{matrix} 1 \\ 33 \end{matrix} \right\} = -\frac{1}{2g_{11}} \frac{\partial g_{33}}{\partial r} = -\frac{1}{2 \exp(2\Lambda)} \frac{\partial (R^2 \sin^2 \theta)}{\partial r} = -\exp(-2\Lambda) \sin^2 \theta R \frac{\partial R}{\partial r}$$

$$\left\{ \begin{matrix} 3 \\ 13 \end{matrix} \right\} = \frac{1}{2g_{33}} \frac{\partial g_{33}}{\partial r} = \frac{1}{2R^2 \sin^2 \theta} \frac{\partial (R^2 \sin^2 \theta)}{\partial r} = \frac{1}{R} \frac{\partial R}{\partial r}$$

$$\left\{ \begin{matrix} 2 \\ 33 \end{matrix} \right\} = -\frac{1}{2g_{22}} \frac{\partial g_{33}}{\partial \theta} = -\frac{1}{2R^2} \frac{\partial (R^2 \sin^2 \theta)}{\partial \theta} = -\sin \theta \cos \theta$$

$$\left\{ \begin{matrix} 3 \\ 23 \end{matrix} \right\} = \frac{1}{2g_{33}} \frac{\partial g_{33}}{\partial \theta} = \frac{1}{2R^2 \sin^2 \theta} \cdot R^2 \frac{\partial (\sin^2 \theta)}{\partial \theta} = \frac{\cos \theta}{\sin \theta} = \cot \theta$$

(95.46)

Orthonormal basis:

$$\underline{e}_0 = e^{-\Phi} \underline{e}_t \quad \underline{e}_1 = e^{-\Lambda} \underline{e}_r \quad \underline{e}_2 = R^{-1} \underline{e}_\theta \quad \underline{e}_3 = (R \sin \theta)^{-1} \underline{e}_\phi$$

or write

$$\underline{e}_a = e_a^\alpha \underline{e}_\alpha \quad \text{where } \underline{e}_a = (\underline{e}_0, \underline{e}_1, \underline{e}_2, \underline{e}_3)$$

$$\underline{e}_\alpha = (e_t, e_r, e_\theta, e_\phi)$$

Then

(95.48)

(95.49)

$$e_a^\alpha = \begin{pmatrix} e^\Phi & & & 0 \\ & e^\Lambda & & \\ 0 & & R^{-1} & \\ & & & (R \sin \theta)^{-1} \end{pmatrix} \quad \text{and} \quad e_\alpha^a = \begin{pmatrix} e^\Phi & & & 0 \\ & e^\Lambda & & \\ 0 & & R & \\ & & & R \sin \theta \end{pmatrix}$$

Photon 4-momentum  
 $m^0$

## Ricci rotation coefficients

For diagonal transformation matrix  $e^a$ , we find:

$$\Gamma_{ac}^b \equiv e^a{}_\alpha e^b{}_\beta e^{\gamma}{}_{c;\alpha} \equiv e^a{}_\alpha e^b{}_\beta [e^{\beta}{}_{c,\alpha} + \{\alpha\gamma\} e^{\gamma}{}_{c,\alpha}]$$

becomes

$$\Gamma_{ac}^b = e^a{}_\alpha (\bar{e}^b)^\alpha{}_\beta [e^b{}_{c,\alpha} \delta^b{}_\alpha + \{\alpha c\} e^c{}_\alpha]$$

Now use (95.48) (95.49) and (95.46) to evaluate the  $\Gamma_{ac}^b$

$$\Gamma_{00}^1 = e^0{}_\alpha (\bar{e}^1)^\alpha{}_\beta [e^1{}_{0,\alpha} \delta^1{}_\alpha + \{00\} e^0{}_\alpha] = e^{-\Phi} e^{-\Lambda} [e^{2(\Phi-\Lambda)} \frac{\partial \Phi}{\partial r} e^{-\Phi}] = e^{-\Lambda} \frac{\partial \Phi}{\partial r} = D_r \Phi$$

$$\Gamma_{22}^1 = e^2{}_\alpha (\bar{e}^1)^\alpha{}_\beta [e^1{}_{2,\alpha} \delta^1{}_\alpha + \{22\} e^2{}_\alpha] = R^{-1} e^{-\Lambda} [-e^{-2\Lambda} R \frac{\partial R}{\partial r} R^{-1}] = -R^{-1} e^{-\Lambda} \frac{\partial R}{\partial r} = -\bar{R}^1 \Gamma$$

$$\Gamma_{33}^1 = e^3{}_\alpha (\bar{e}^1)^\alpha{}_\beta [e^1{}_{3,\alpha} \delta^1{}_\alpha + \{33\} e^3{}_\alpha] = (R \sin \theta)^{-1} e^{-\Lambda} [-e^{-2\Lambda} R \frac{\partial R}{\partial r} \sin \theta (R \sin \theta)^{-1}] = -R^{-1} e^{-\Lambda} \frac{\partial R}{\partial r} = -\bar{R}^1 D_r R = -\bar{R}^1 \Gamma$$

$$\Gamma_{10}^1 = e^1{}_\alpha (\bar{e}^1)^\alpha{}_\beta [0 + \{10\} e^0{}_\alpha] = 1 \left[ \frac{\partial \Lambda}{\partial t} e^{-\Phi} \right] = D_t \Lambda$$

$$\Gamma_{33}^2 = e^3{}_\alpha (\bar{e}^2)^\alpha{}_\beta [0 + \{33\} e^3{}_\alpha] = (R \sin \theta)^2 R (-\sin \theta \cos \theta) = -\bar{R}^2 \cot \theta$$

$$\Gamma_{20}^2 = e^2{}_\alpha (\bar{e}^2)^\alpha{}_\beta [0 + \{20\} e^0{}_\alpha] = 1 \left[ R^{-1} \frac{\partial R}{\partial t} e^{-\Phi} \right] = R^{-1} e^{-\Phi} \frac{\partial R}{\partial t} = R^{-1} D_t R = \bar{R}^2 U$$

$$\Gamma_{30}^3 = e^3{}_\alpha (\bar{e}^3)^\alpha{}_\beta [0 + \{30\} e^0{}_\alpha] = 1 \left[ R^{-1} \frac{\partial R}{\partial t} e^{-\Phi} \right] = R^{-1} U$$

$$\Gamma_{21}^2 = e^2{}_\alpha (\bar{e}^2)^\alpha{}_\beta [0 + \{21\} e^1{}_\alpha] = 1 \left[ R^{-1} \frac{\partial R}{\partial r} e^{-\Lambda} \right] = R^{-1} e^{-\Lambda} \frac{\partial R}{\partial r} = R^{-1} D_r R = \bar{R}^2 \Gamma$$

$$\Gamma_{31}^3 = e^3{}_\alpha (\bar{e}^3)^\alpha{}_\beta [0 + \{31\} e^1{}_\alpha] = 1 \left[ R^{-1} \frac{\partial R}{\partial r} e^{-\Lambda} \right] = R^{-1} \Gamma$$

$$\Gamma_{32}^3 = e^3{}_\alpha (\bar{e}^3)^\alpha{}_\beta [0 + \{32\} e^2{}_\alpha] = 1 \left[ \cot \theta (R \sin \theta) \right] = \bar{R}^3 \cot \theta$$

$$\Gamma_{11}^1 = e^1{}_\alpha (\bar{e}^1)^\alpha{}_\beta [e^1{}_{1,\alpha} + \{11\} e^1{}_\alpha] = 1 \left[ \frac{\partial}{\partial r} (e^{-\Lambda}) + \frac{\partial \Lambda}{\partial r} e^{-\Lambda} \right] = -\frac{\partial \Lambda}{\partial r} e^{-\Lambda} + \frac{\partial \Lambda}{\partial r} e^{-\Lambda} = 0$$

$$\frac{\partial}{\partial m^1} = \cos\theta \frac{\partial}{\partial v} - \frac{\sin\theta}{v} \frac{\partial}{\partial \theta} = \cos\theta \frac{\partial}{\partial v} - \frac{\sin\theta}{v} \frac{(-\sin\theta) \frac{\partial}{\partial \theta}}{(-\sin\theta) \partial \theta} = \cos\theta \frac{\partial}{\partial v} + \frac{\sin^2\theta}{v} \frac{\partial}{\partial \mu}$$

$$= \mu \frac{\partial}{\partial v} + \frac{(1-\mu^2)}{v} \frac{\partial}{\partial \mu}$$

$$\frac{\partial}{\partial m^2} = \sin\theta \cos\Phi \frac{\partial}{\partial v} + v^{-1} \cos\theta \cos\Phi \frac{\partial}{\partial \theta} = \sin\theta \cos\Phi \frac{\partial}{\partial v} + \frac{\cos\theta \cos\Phi (-\sin\theta) \frac{\partial}{\partial \theta}}{(-\sin\theta) \partial \theta}$$

$$= \cos\Phi \left[ \sin\theta \frac{\partial}{\partial v} - \frac{\cos\theta \sin\theta}{v} \frac{\partial}{\partial \mu} \right] = (1-\mu^2)^{1/2} \cos\Phi \left( \frac{\partial}{\partial v} - \frac{\mu}{v} \frac{\partial}{\partial \mu} \right)$$

$$\frac{\partial}{\partial m^3} = \sin\theta \sin\Phi \frac{\partial}{\partial v} + \frac{\cos\theta \sin\Phi}{v} \frac{\partial}{\partial \theta} = \sin\Phi \left[ \sin\theta \frac{\partial}{\partial v} + \frac{\cos\theta (-\sin\theta)}{v} \frac{\partial}{\partial \theta} \right]$$

$$= (1-\mu^2)^{1/2} \sin\Phi \left[ \frac{\partial}{\partial v} - \frac{\mu}{v} \frac{\partial}{\partial \mu} \right]$$

$$m^a \partial_a = m^a e_a^\alpha \frac{\partial}{\partial x^\alpha} = m^0 e_0^\alpha \frac{\partial}{\partial t} + m^1 e_1^\alpha \frac{\partial}{\partial r}$$

$$= v \bar{e}^\Phi \frac{\partial}{\partial t} + v \cos \Phi \bar{e}^\Lambda \frac{\partial}{\partial r} = v \bar{e}^\Phi \frac{\partial}{\partial t} + v \mu \bar{e}^\Lambda \frac{\partial}{\partial r} \equiv v D_t + \mu v D_r$$

$$m^a m^c \Gamma_{ac}^b \frac{\partial}{\partial m^b} = m^a m^c \Gamma_{ac}^1 \frac{\partial}{\partial m^1} + m^a m^c \Gamma_{ac}^2 \frac{\partial}{\partial m^2} + m^a m^c \Gamma_{ac}^3 \frac{\partial}{\partial m^3}$$

$$= (m^0 m^0 \Gamma_{00}^1 + m^2 m^2 \Gamma_{22}^1 + m^3 m^3 \Gamma_{33}^1 + m^1 m^0 \Gamma_{10}^1) \frac{\partial}{\partial m^1}$$

$$+ (m^3 m^3 \Gamma_{33}^2 + m^2 m^0 \Gamma_{20}^2 + m^2 m^1 \Gamma_{21}^2) \frac{\partial}{\partial m^2} + (m^3 m^0 \Gamma_{30}^3 + m^3 m^1 \Gamma_{31}^3 + m^3 m^2 \Gamma_{32}^3) \frac{\partial}{\partial m^3}$$

These coefficients become:

$$m^0 m^0 \Gamma_{00}^1 + m^2 m^2 \Gamma_{22}^1 + m^3 m^3 \Gamma_{33}^1 + m^1 m^0 \Gamma_{10}^1 = v^2 [D_r \Phi + \mu D_t \Lambda - (1-\mu^2) \Gamma/R]$$

$$m^3 m^3 \Gamma_{33}^2 + m^2 m^1 \Gamma_{21}^2 + m^2 m^0 \Gamma_{20}^2 = (1-\mu^2)^{1/2} \frac{v^2}{R} [-\mu \sin^2 \Phi + (U + \mu \Gamma) \cos \Phi]$$

$$m^3 m^0 \Gamma_{30}^3 + m^3 m^1 \Gamma_{31}^3 + m^3 m^2 \Gamma_{32}^3 = (1-\mu^2)^{1/2} \frac{v^2}{R} \sin \Phi [U + \mu \Gamma + \mu \cos \Phi]$$

Then using

$$\frac{\partial}{\partial m^1} = \mu \frac{\partial}{\partial v} + \frac{(1-\mu^2)}{v} \frac{\partial}{\partial \mu}$$

$$\frac{\partial}{\partial m^2} = (1-\mu^2)^{1/2} \cos \Phi \left( \frac{\partial}{\partial v} - \frac{\mu}{v} \frac{\partial}{\partial \mu} \right)$$

$$\frac{\partial}{\partial m^3} = (1-\mu^2)^{1/2} \sin \Phi \left( \frac{\partial}{\partial v} - \frac{\mu}{v} \frac{\partial}{\partial \mu} \right)$$

we have

$$v^{-1} m^a m^c \Gamma_{ac}^b \frac{\partial}{\partial m^b} = v [D_r \Phi + \mu D_t \Lambda - (1-\mu^2) \frac{\Gamma}{R}] \left[ \mu \frac{\partial}{\partial v} + \frac{(1-\mu^2)}{v} \frac{\partial}{\partial \mu} \right]$$

$$+ (1-\mu^2)^{1/2} \frac{v}{R} [-\mu \sin^2 \Phi + (U + \mu \Gamma) \cos \Phi] (1-\mu^2)^{1/2} \cos \Phi \left( \frac{\partial}{\partial v} - \frac{\mu}{v} \frac{\partial}{\partial \mu} \right)$$

$$+ (1-\mu^2)^{1/2} \frac{v}{R} \sin \Phi [U + \mu \Gamma + \mu \cos \Phi] (1-\mu^2)^{1/2} \sin \Phi \left( \frac{\partial}{\partial v} - \frac{\mu}{v} \frac{\partial}{\partial \mu} \right)$$

$$= v \left\{ \mu D_r \Phi + \mu^2 D_t \Lambda - \mu (1-\mu^2) \frac{\Gamma}{R} + (1-\mu^2) \cos \Phi [-\mu \sin^2 \Phi + (U + \mu \Gamma) \cos \Phi] + \frac{(1-\mu^2)}{R} \sin^2 \Phi (U + \mu \Gamma + \mu \cos \Phi) \right\} \frac{\partial}{\partial v}$$

$$+ (1-\mu^2) \left\{ D_r \Phi + \mu D_t \Lambda - (1-\mu^2) \frac{\Gamma}{R} + \frac{\cos \Phi}{R} [-\mu \sin^2 \Phi + (U + \mu \Gamma) \cos \Phi] (-\mu) + \frac{\sin^2 \Phi}{R} (U + \mu \Gamma + \mu \cos \Phi) (-\mu) \right\} \frac{\partial}{\partial \mu}$$

$$= v \left\{ \mu D_r \Phi + \mu^2 D_t \Lambda - \mu (1-\mu^2) \frac{\Gamma}{R} + \frac{(1-\mu^2)}{R} [\cos \Phi (-\mu \sin^2 \Phi + (U + \mu \Gamma) \cos \Phi) + \sin^2 \Phi (U + \mu \Gamma + \mu \cos \Phi)] \right\} \frac{\partial}{\partial v}$$

$$+ (1-\mu^2) \left\{ D_r \Phi + \mu D_t \Lambda - (1-\mu^2) \frac{\Gamma}{R} - \frac{\mu}{R} [\cos \Phi (-\mu \sin^2 \Phi + (U + \mu \Gamma) \cos \Phi) + \sin^2 \Phi (U + \mu \Gamma + \mu \cos \Phi)] \right\} \frac{\partial}{\partial \mu}$$

now  $\cos \Phi (-\mu \sin^2 \Phi + (U + \mu \Gamma) \cos \Phi) + \sin^2 \Phi (U + \mu \Gamma + \mu \cos \Phi) = -\mu \sin^2 \Phi \cos \Phi + U \cos^2 \Phi + \mu \Gamma \cos^2 \Phi$

$$+ \mu \sin^2 \Phi \cos \Phi + \sin^2 \Phi U + \mu \Gamma \sin^2 \Phi = (U + \mu \Gamma)$$

$$\text{Hence } \gamma^i m^a m^c \Gamma_{ac}^b \frac{\partial}{\partial m^b} = \gamma \left\{ \mu D_r \Phi + \mu^2 D_t \Lambda - \mu (1-\mu^2) \frac{\Gamma}{R} + (1-\mu^2) \frac{U + \mu \Gamma}{R} \right\}$$

$$+ (1-\mu^2) \left\{ D_r \Phi + \mu D_t \Lambda - (1-\mu^2) \frac{\Gamma}{R} - \frac{\mu}{R} (U + \mu \Gamma) \right\}$$

$$= \gamma \left\{ \mu D_r \Phi + \mu^2 D_t \Lambda + (1-\mu^2) \frac{U}{R} \right\} \frac{\partial}{\partial \gamma} + (1-\mu^2) \left\{ D_r \Phi + \mu D_t \Lambda - \frac{\Gamma}{R} - \mu \frac{U}{R} \right\} \frac{\partial}{\partial \mu}$$

and we then have

$$m^a \partial_a - m^a m^c \Gamma_{ac}^b \frac{\partial}{\partial m^b} = \gamma D_t + \mu \gamma D_r - \gamma^2 \left\{ \mu D_r \Phi + \mu^2 D_t \Lambda + (1-\mu^2) \frac{U}{R} \right\} \frac{\partial}{\partial \gamma}$$

$$+ \gamma (1-\mu^2) \left\{ \frac{\Gamma}{R} - D_r \Phi + \mu \left( \frac{\Gamma}{R} - D_t \Lambda \right) \right\} \frac{\partial}{\partial \mu}$$

S(6)  $\Rightarrow$

$$\frac{1}{\gamma} (e-a\partial) = D_t \downarrow + \mu D_r \downarrow - \gamma \left\{ \mu D_r \Phi + \mu^2 D_t \Lambda + (1-\mu^2) \frac{U}{R} \right\} \frac{\partial}{\partial \gamma} + (1-\mu^2) \left\{ \frac{\Gamma}{R} - D_r \Phi + \mu \left( \frac{\Gamma}{R} - D_t \Lambda \right) \right\} \frac{\partial}{\partial \mu}$$

Take  $(t', r, \theta, \phi)$  = inertial frame coordinates  $(t, M_r, \theta, \phi)$  = Lagrangian coordinates

$$M_r(r, t') = \int_0^r 4\pi(r')^2 \rho_0(r', t') dr'$$

$$t(r, t') = t' - c^2 \int_0^r v(r', t') dr'$$

and  $v \equiv \frac{dr}{dt'} = - (4\pi r^2 \rho_0)^{-1} \left. \frac{\partial M_r}{\partial t'} \right|_r \Rightarrow \frac{\partial M_r}{\partial t'} = - (4\pi r^2 \rho_0) v$

$$dM_r = \frac{\partial M_r}{\partial r} dr + \frac{\partial M_r}{\partial t'} dt' = 4\pi r^2 \rho_0(r, t) dr + (-4\pi r^2 \rho_0 v) dt'$$

(95.64)  $\frac{dM_r}{4\pi r^2 \rho_0} = dr - v dt' \equiv dx$

$$dt = \frac{\partial t}{\partial t'} dt' + \frac{\partial t}{\partial r} dr = dt' - \frac{1}{c^2} v(r, t) dr - \frac{1}{c^2} \left[ \int_0^r \frac{\partial v(r', t')}{\partial t'} dr' \right] dt'$$

(95.66) now define  $I \equiv \int_0^r (\partial v / \partial t') dr'$ , then

(95.65)  $dt = dt' (1 - I/c^2) - (v/c^2) dr$

Solve for  $dr$  and  $dt'$ :

$$dr = dx + v dt'$$

$$\Rightarrow dt = dt' (1 - I/c^2) - (v/c^2) (dx + v dt')$$

$$= dt' (1 - I/c^2) - (v^2/c^2) dt' - (v/c^2) dx$$

$$dt' = [dt + (v/c^2) dx] / [1 - I/c^2 - v^2/c^2]$$

(95.68)  $dt' = D^{-1} [dt + (v/c^2) dx]$

$$dr = dx + v D^{-1} [dt + (v/c^2) dx]$$

$$= dx (1 + D^{-1} v^2/c^2) + D^{-1} v dt$$

$$= dx \left[ \frac{1 - I/c^2 - v^2/c^2 + v^2/c^2}{1 - I/c^2 - v^2/c^2} \right] D^{-1} + D^{-1} v dt$$

(95.67)  $dr = D^{-1} (1 - I/c^2) dx + D^{-1} v dt$

(95.68)  $D = 1 - I/c^2 - v^2/c^2$

Substitute into the inertial frame metric

$$ds^2 = -c^2 (dt')^2 + dr^2 + r^2 (d\theta^2 + \sin^2 \theta d\phi^2)$$

$$= -c^2 [dt + v dx/c^2]^2 / D^2 + [(1 - I/c^2) dx + v dt]^2 / D^2 + r^2 (d\theta^2 + \sin^2 \theta d\phi^2)$$

$$ds^2 = -c^2 D^{-2} dt^2 - (v^2/c^2) D^{-2} dx^2 - 2v dx dt D^{-2} + v^2 D^2 dt^2 + (1 - I/c^2) D^2 dx^2 + 2v(1 - I/c^2) dx dt D^{-2} + r^2 (d\theta^2 + \sin^2 \theta d\phi^2)$$

(95.71) almost  $ds^2 = (v^2/c^2) D^{-2} dt^2 + [(1 - I/c^2)^2 - v^2/c^2] D^2 dx^2 - (2vI/c^2) D^{-2} dx dt + r^2 (d\theta^2 + \sin^2 \theta d\phi^2)$   
 $= -G dt^2 + F dx^2 - 2H dx dt + r^2 (d\theta^2 + \sin^2 \theta d\phi^2)$

now  $G = (v^2/c^2) D^{-2} = -c^2 (1 - v^2/c^2) / [1 - (I+v^2)/c^2]^2 \cong -c^2 / [1 - 2(I+v^2)/c^2 + (I+v^2)^2/c^4]$   
 to  $O(v/c)$   
 (95.73) (95.75)  $-G \cong -c^2 / [1 - 2I/c^2] \cong -c^2 (1 + 2I/c^2) \cong -c^2 - 2I$

(95.72)  $F = [(1 - I/c^2)^2 - v^2/c^2] / [1 - (I+v^2)/c^2]^2 = \frac{[1 - 2I/c^2 - v^2/c^2 + I^2/c^4]}{1 - 2I/c^2 - 2v^2/c^2 + \frac{I^2}{c^4} + \frac{2Iv^2}{c^4} + \frac{v^4}{c^4}}$

$$F \cong \frac{(1 - 2I/c^2)}{(1 - 2I/c^2)} + O(v^2/c^2) = 1 + O(v^2/c^2)$$

(95.74)  $2vI/c^2 = 2v \int \frac{\partial v}{\partial t} dr' / c^2 = O(v^2/c^2) = 2H (4\pi r^2 \rho_0)$

and  $dx = dm_r / 4\pi r^2 \rho_0$

Thus we have the  $O(v/c)$  metric

(95.71)  $ds^2 = (-c^2 - 2I) dt^2 + \frac{dm_r^2}{(4\pi \rho_0 r^2)^2} + r^2 (d\theta^2 + \sin^2 \theta d\phi^2)$

Can compare this with Castor's metric eq (18) of Castor 1972.

Compare this with:

(95.45)  $ds^2 = -e^{2\Phi} dt^2 + e^{2\Lambda} dr^2 + R^2 (d\theta^2 + \sin^2 \theta d\phi^2)$   $dr \rightarrow dM_r$

to get

(95.76) 
$$\left. \begin{aligned} e^{2\Phi} &= c^2 + 2I \Rightarrow \Phi = \frac{1}{2} \ln(c^2 + 2I) \\ e^{2\Lambda} &= (4\pi r^2 \rho_0)^{-2} \Rightarrow 2\Lambda = -2 \ln(4\pi r^2 \rho_0) \\ \Lambda &= -\ln(4\pi r^2 \rho_0) \\ R &= r \\ dr &= dM_r \end{aligned} \right\}$$

Then calculate derivatives

$$(95.77) \quad D_t \equiv e^{-\frac{\Phi}{c}} \frac{\partial}{\partial t} = (c^2 + 2I)^{1/2} \frac{\partial}{\partial t} = \frac{1}{c(1+2I/c^2)^{1/2}} \frac{\partial}{\partial t} \\ = \frac{1}{c} \left(1 - \frac{I}{c^2}\right) \frac{\partial}{\partial t} \approx \frac{1}{c} \frac{\partial}{\partial t}$$

$$(95.77) \quad D_r = e^{-\frac{\Phi}{c}} \frac{\partial}{\partial r} = (4\pi r^2 \rho_0) \frac{\partial}{\partial m_r} = \frac{\partial}{\partial r}$$

Then

$$U = D_t R = \frac{1}{c} \frac{\partial R}{\partial t} = v/c$$

$$\Gamma = D_r R = \frac{\partial R}{\partial r}(r) = 1$$

$$(95.78) \quad D_r \Phi = D_r \left[ \frac{1}{2} \ln(c^2 + 2I) \right] = \frac{1}{2} (c^2 + 2I)^{-1} \frac{\partial}{\partial r} (2I) = (c^2 + 2I)^{-1} \frac{\partial}{\partial r} \int_0^r \frac{\partial v}{\partial t'} dr' \\ = (c^2 + 2I)^{-1} \frac{\partial v}{\partial t'} = \frac{1}{c^2} \frac{\partial v}{\partial t'} - \frac{1}{c^2} (2I/c^2) \frac{\partial v}{\partial t'} \approx \frac{1}{c^2} \frac{\partial v}{\partial t'} + O(v^2/c^2) \\ = a/c^2$$

$$(95.79) \quad D_t \Lambda = \frac{1}{c} \frac{\partial}{\partial t} [-\ln(4\pi r^2 \rho_0)] = -\frac{1}{c} \frac{1}{(4\pi r^2 \rho_0)} \frac{\partial}{\partial t} (4\pi r^2 \rho_0) = -\frac{1}{c r^2 \rho_0} \frac{\partial}{\partial t} (r^2 \rho_0) \\ \frac{\partial}{\partial t} \leftrightarrow \frac{D}{D t} ?? \\ = -\frac{1}{c} \frac{1}{r^2 \rho_0} \left( 2r \frac{\partial r}{\partial t} \rho_0 + r^2 \frac{\partial \rho_0}{\partial t} \right) = -\frac{1}{c} \left[ \frac{2v}{r} + \frac{\partial \ln \rho_0}{\partial t} \right]$$

Now return to (95.61):

$$r'(e-a\mathcal{J}) = D_t \mathcal{J} + \mu D_r \mathcal{J} - v \left[ \mu D_r \Phi + \mu^2 D_t \Lambda + (1-\mu^2) \frac{U}{R} \right] \frac{\partial \mathcal{J}}{\partial v} + (1-\mu^2) \left\{ \frac{\Gamma}{R} - D_r \Phi + \mu \left( \frac{v}{R} - D_t \Lambda \right) \right\} \frac{\partial \mathcal{J}}{\partial \mu}$$

and first substitute in (95.78)-(95.79)

$$r'(e-a\mathcal{J}) = c^{-1} \frac{\partial \mathcal{J}}{\partial t} \left( \frac{D\mathcal{J}}{Dt} \right) + \mu \frac{\partial \mathcal{J}}{\partial r} - v \left[ \mu \frac{a}{c^2} - \frac{\mu^2}{c} \left( \frac{2v}{r} + \frac{\partial \ln \rho_0}{\partial t} \right) + (1-\mu^2) \frac{v}{rc} \right] \frac{\partial \mathcal{J}}{\partial v} \\ + (1-\mu^2) \left\{ \frac{1}{r} - \frac{a}{c^2} + \mu \left( \frac{v}{cr} + \frac{2v}{rc} + \frac{1}{c} \frac{\partial \ln \rho_0}{\partial t} \right) \right\} \frac{\partial \mathcal{J}}{\partial \mu}$$

compare w/ astor (1972) eqn (20)

$$r'(e-a\mathcal{J}) = \frac{1}{c} \frac{\partial \mathcal{J}}{\partial t} + \mu \frac{\partial \mathcal{J}}{\partial r} - v \left[ \mu \frac{a}{c^2} - \frac{\mu^2}{c} \frac{\partial \ln \rho_0}{\partial t} + (1-3\mu^2) \frac{v}{rc} \right] \frac{\partial \mathcal{J}}{\partial v} \\ + (1-\mu^2) \left\{ \frac{\mu}{c} \left( \frac{3v}{r} + \frac{\partial \ln \rho_0}{\partial t} \right) + \frac{1}{r} - \frac{a}{c^2} \right\} \frac{\partial \mathcal{J}}{\partial \mu}$$

Now replace:  $\mathcal{J} = I_0/v_0^3$   $e = \eta_0/v_0^2$   $a = v_0 \chi_0$  and explicitly note that  $\mu$  is  $\mu_0$ ,  $v$  is  $v_0$

$$r_0^{-1} (\eta_0/v_0^2 - v_0 \chi_0 I_0/v_0^3) = v_0^3 (\eta_0 - \chi_0 I_0) = \frac{1}{c} \frac{\partial}{\partial t} \left( \frac{I_0}{v_0^3} \right) + \mu_0 \frac{\partial}{\partial r} \left( \frac{I_0}{v_0^3} \right) - v_0 \left[ \mu_0 \frac{a}{c^2} - \frac{\mu_0^2}{c} \frac{\partial \ln \rho_0}{\partial t} + (1-3\mu_0^2) \frac{v_0}{rc} \right] \frac{\partial}{\partial v_0} \left( \frac{I_0}{v_0^3} \right) \\ + (1-\mu_0^2) \left\{ \frac{\mu_0}{c} \left( \frac{3v_0}{r} + \frac{\partial \ln \rho_0}{\partial t} \right) + \frac{1}{r} - \frac{a}{c^2} \right\} \frac{\partial}{\partial \mu_0} \left( \frac{I_0}{v_0^3} \right)$$

$$\gamma_0^{-3}(\eta_0 - \chi_0 I_0) = \gamma_0^{-3} \left( \frac{1}{c} \frac{\partial I_0}{\partial t} + \mu_0 \frac{\partial I_0}{\partial r} \right) - \gamma_0^{-2} \left[ \mu_0 \frac{a}{c^2} - \frac{\mu_0^2}{c} \frac{\partial \ln \rho_0}{\partial t} + \frac{(1-3\mu_0^2)v}{rc} \right] \frac{\partial I_0}{\partial v_0} + \frac{3v_0}{v_0^4} \left[ \frac{\mu_0 a}{c^2} - \frac{\mu_0^2}{c} \frac{\partial \ln \rho_0}{\partial t} + \frac{(1-3\mu_0^2)v}{rc} \right] I_0$$

$$+ \gamma_0^{-3} (1-\mu_0^2) \left\{ \frac{\mu_0}{c} \left( \frac{3v}{r} + \frac{\partial \ln \rho_0}{\partial t} \right) + \frac{1}{r} - \frac{a}{c^2} \right\} \frac{\partial I_0}{\partial \mu_0}$$

and thus

$$\eta_0 - \chi_0 I_0 = \frac{1}{c} \frac{\partial I_0}{\partial t} + \mu_0 \frac{\partial I_0}{\partial r} + (1-\mu_0^2) \left\{ \frac{\mu_0}{c} \left( \frac{3v}{r} + \frac{\partial \ln \rho_0}{\partial t} \right) + \frac{1}{r} - \frac{a}{c^2} \right\} \frac{\partial I_0}{\partial \mu_0} - \gamma_0 \left\{ \frac{(1-3\mu_0^2)v}{rc} - \frac{\mu_0^2}{c} \frac{\partial \ln \rho_0}{\partial t} + \frac{\mu_0 a}{c^2} \right\} \frac{\partial I_0}{\partial v_0}$$

$$+ 3 \left\{ \frac{(1-3\mu_0^2)v}{rc} - \frac{\mu_0^2}{c} \frac{\partial \ln \rho_0}{\partial t} + \frac{\mu_0 a}{c^2} \right\} I_0$$

note also  $D_r$  can be written  $4\pi r^2 \rho_0 \frac{\partial}{\partial m_r}$ , yielding  $\mu D_r \partial = 4\pi r^2 \rho_0 \mu_0 \frac{\partial}{\partial m_r} = \frac{4\pi r^2 \rho_0 \mu_0}{v_0^3} \frac{\partial I_0}{\partial m_r}$   
hence

(9.5.80) 
$$\eta_0 - \chi_0 I_0 = \frac{1}{c} \frac{\partial I_0}{\partial t} + 4\pi r^2 \rho_0 \mu_0 \frac{\partial I_0}{\partial m_r} + (1-\mu_0^2) \left\{ \frac{\mu_0}{c} \left( \frac{3v}{r} + \frac{\partial \ln \rho_0}{\partial t} \right) + \frac{1}{r} - \frac{a}{c^2} \right\} \frac{\partial I_0}{\partial \mu_0} - \gamma_0 \left\{ \frac{(1-3\mu_0^2)v}{rc} - \frac{\mu_0^2}{c} \frac{\partial \ln \rho_0}{\partial t} + \frac{\mu_0 a}{c^2} \right\} \frac{\partial I_0}{\partial v_0}$$

compare Castor (21) 
$$+ 3 \left\{ \frac{(1-3\mu_0^2)v}{rc} - \frac{\mu_0^2}{c} \frac{\partial \ln \rho_0}{\partial t} + \frac{\mu_0 a}{c^2} \right\} I_0$$

Where the derivatives  $\frac{\partial}{\partial t}$  are Lagrangian derivatives, hence can be written  $\frac{D}{Dt}$  as in DMM eqn (9.5.80)

The continuity eqn gives  $\frac{D \ln \rho_0}{Dt} = -\frac{1}{r^2} \frac{\partial}{\partial r} (r^2 v) = -\frac{2v}{r} - \frac{\partial v}{\partial r}$  and thus

re retrieve  
(9.5.12)

$$\eta_0 - \chi_0 I_0 = \frac{1}{c} \frac{D I_0}{Dt} + \mu_0 \frac{\partial I_0}{\partial r} + (1-\mu_0^2) \left\{ \frac{\mu_0}{c} \left( \frac{v}{r} - \frac{\partial v}{\partial r} \right) + \frac{1}{r} - \frac{a}{c^2} \right\} \frac{\partial I_0}{\partial \mu_0} - \gamma_0 \left\{ \frac{(1-\mu_0^2)v}{rc} + \frac{\mu_0^2}{c} \frac{\partial v}{\partial r} + \frac{\mu_0 a}{c^2} \right\} \frac{\partial I_0}{\partial v_0}$$

$$+ 3 \left\{ \frac{(1-\mu_0^2)v}{rc} + \frac{\mu_0^2}{c} \frac{\partial v}{\partial r} + \frac{\mu_0 a}{c^2} \right\} I_0$$

Integrate this equation over  $d\mu_0$  and over  $\mu_0 d\mu_0$  and with  $(J_0, H_0, K_0) \rightarrow (E_0, F_0, P_0)$   
 $N_0 \rightarrow Q_0$

$$\int (\eta_0 - \chi_0 I_0) d\mu_0 = \frac{1}{c} \int \frac{D I_0}{Dt} d\mu_0 + 4\pi r^2 \rho_0 \int \mu_0 \frac{\partial I_0}{\partial m_r} d\mu_0 + \int (1-\mu_0^2) \left\{ \frac{\mu_0}{c} \left( \frac{3v}{r} + \frac{D \ln \rho_0}{Dt} \right) + \frac{1}{r} - \frac{a}{c^2} \right\} \frac{\partial I_0}{\partial \mu_0} d\mu_0$$

$$- \gamma_0 \int \left\{ \frac{(1-3\mu_0^2)v}{rc} - \frac{\mu_0^2}{c} \frac{D \ln \rho_0}{Dt} + \frac{\mu_0 a}{c^2} \right\} \frac{\partial I_0}{\partial v_0} d\mu_0 + 3 \int \left\{ \frac{(1-3\mu_0^2)v}{rc} - \frac{\mu_0^2}{c} \frac{D \ln \rho_0}{Dt} + \frac{\mu_0 a}{c^2} \right\} I_0 d\mu_0$$

$$\eta_0 - \chi_0 J_0(v_0) = \frac{1}{c} \frac{D J_0(v_0)}{Dt} + 4\pi r^2 \rho_0 \frac{\partial H_0}{\partial m_r} - \int \frac{\partial}{\partial \mu_0} \left\{ (1-\mu_0^2) \left[ \frac{\mu_0}{c} \left( \frac{3v}{r} + \frac{D \ln \rho_0}{Dt} \right) + \frac{1}{r} - \frac{a}{c^2} \right] \right\} I_0 d\mu_0$$

3. final equation is:

(95.82)

$$4\pi\epsilon_0 - c\chi_0 E_0 = \frac{DE_0}{Dt} + 4\pi\epsilon_0 \frac{\partial}{\partial r} (r^2 F_0) - \frac{\partial}{\partial y_0} \left\{ v_0 \left[ \frac{v}{r} (E_0 - 3P_0) - \frac{D\mu_0}{Dt} P_0 + \frac{a}{c^2} F_0 \right] \right\} + \frac{v}{r} (E_0 - 3P_0) - \frac{D\mu_0}{Dt} (E_0 + P_0) + \frac{2a}{c^2} F_0$$

Now integrate (95.80) over  $\mu_0 d\mu_0$

$$\int (\epsilon_0 - \chi_0 I_0) \mu_0 d\mu_0 = \frac{1}{c} \int \mu_0 d\mu_0 \frac{DE_0}{Dt} + 4\pi\epsilon_0 \int \mu_0^2 d\mu_0 \frac{\partial I_0}{\partial r} + \int \mu_0 d\mu_0 (1 - \mu_0^2) \left\{ \frac{\mu_0}{c} \left( \frac{3v}{r} + \frac{D\mu_0}{Dt} \right) + \frac{1}{r} - \frac{a}{c^2} \right\} \frac{\partial F_0}{\partial \mu_0} - \chi_0 \int \left\{ \frac{(1-3\mu_0^2)v}{cr} - \frac{\mu_0^2}{c} \frac{D\mu_0}{Dt} + \mu_0 \frac{a}{c^2} \right\} \frac{\partial I_0}{\partial \mu_0} \mu_0 d\mu_0 + 3 \int \mu_0 d\mu_0 \left\{ \frac{(1-3\mu_0^2)v}{cr} - \frac{\mu_0^2}{c} \frac{D\mu_0}{Dt} + \frac{\mu_0 a}{c^2} \right\} I_0$$

$$\Rightarrow -\chi_0 H_0 = \frac{1}{c} \frac{DH_0}{Dt} + 4\pi\epsilon_0 \frac{\partial K_0}{\partial r} + \frac{1}{c} \left( \frac{3v}{r} + \frac{D\mu_0}{Dt} \right) \left[ \int (\mu_0^2 - \mu_0^4) d\mu_0 \frac{\partial I_0}{\partial \mu_0} \right] + \left( \frac{1}{r} - \frac{a}{c^2} \right) \int (\mu_0 - \mu_0^3) \frac{\partial I_0}{\partial \mu_0} d\mu_0$$

$$-v_0 \frac{\partial}{\partial y_0} \left\{ \frac{v}{cr} \left( \frac{\partial H_0}{\partial y_0} - 3 \frac{\partial N_0}{\partial y_0} \right) + \frac{3v}{c} \frac{D\mu_0}{Dt} \frac{\partial N_0}{\partial y_0} + \frac{a}{c^2} \frac{\partial K_0}{\partial y_0} \right\} + \frac{3v}{cr} (H_0 - 3N_0) - \frac{3D\mu_0}{c} N_0 + \frac{3a}{c^2} K_0$$

$$-\chi_0 H_0 = \frac{1}{c} \frac{DH_0}{Dt} + 4\pi\epsilon_0 \frac{\partial K_0}{\partial r} + \frac{1}{c} \left( \frac{3v}{r} + \frac{D\mu_0}{Dt} \right) \left( - \int I_0 (2\mu_0 - 4\mu_0^3) d\mu_0 + \left( \frac{1}{r} - \frac{a}{c^2} \right) \int I_0 (1 - 3\mu_0^2) d\mu_0 \right)$$

$$-v_0 \frac{\partial}{\partial y_0} \left\{ \frac{v}{cr} (H_0 - 3N_0) - \frac{1}{c} \frac{D\mu_0}{Dt} N_0 + \frac{a}{c^2} K_0 \right\} + \frac{3v}{cr} (H_0 - 3N_0) - \frac{3}{c} \frac{D\mu_0}{Dt} N_0 + \frac{3a}{c^2} K_0$$

and thus  $-\chi_0 H_0 = \frac{1}{c} \frac{DH_0}{Dt} + 4\pi\epsilon_0 r^2 \frac{\partial K_0}{\partial r} + \frac{1}{c} \left( \frac{3v}{r} + \frac{D\mu_0}{Dt} \right) (4N_0 - 2H_0) + \left( \frac{1}{r} - \frac{a}{c^2} \right) (3K_0 - \dot{J}_0)$

$$-v_0 \frac{\partial}{\partial y_0} \left\{ v_0 \left[ \frac{v}{cr} (H_0 - 3N_0) - \frac{1}{c} \frac{D\mu_0}{Dt} N_0 + \frac{a}{c^2} K_0 \right] \right\} + \frac{v}{cr} (H_0 - 3N_0) - \frac{1}{c} \frac{D\mu_0}{Dt} N_0 + \frac{a}{c^2} K_0 + \frac{3v}{cr} (H_0 - 3N_0) - \frac{3}{c} \frac{D\mu_0}{Dt} N_0 + \frac{3a}{c^2} K_0$$

$$= \frac{1}{c} \frac{DH_0}{Dt} + 4\pi\epsilon_0 \frac{\partial K_0}{\partial r} - \frac{4\pi\epsilon_0 K_0}{4\pi r^2} + \left( \frac{a}{c^2} - \frac{1}{r} \right) \dot{J}_0 + \left( \frac{1}{c} \right) \left( \frac{3v}{r} + \frac{D\mu_0}{Dt} \right) (2H_0) + \left( \frac{1}{r} - \frac{a}{c^2} \right) 3K_0 + \frac{1}{c} \left( \frac{3v}{r} + \frac{D\mu_0}{Dt} \right) \cdot 4N_0 - \frac{\partial}{\partial y_0} \left\{ v_0 \left[ \frac{v}{cr} (H_0 - 3N_0) - \frac{1}{c} \frac{D\mu_0}{Dt} N_0 + \frac{a}{c^2} K_0 \right] \right\} + \frac{4v}{cr} H_0 + \frac{3v}{c^2} K_0 + \left( -\frac{3v}{cr} N_0 - \frac{3v}{cr} N_0 - \frac{4}{c} \frac{D\mu_0}{Dt} N_0 + \frac{3a}{c^2} K_0 \right)$$

$$-\chi_0 H_0 = \frac{1}{c} \frac{DH_0}{Dt} + 4\pi\epsilon_0 \frac{\partial (r^2 K_0)}{\partial r} + \left( \frac{a}{c^2} - \frac{1}{r} \right) \dot{J}_0 + \left( \frac{2v}{cr} + \frac{3}{c} \frac{D\mu_0}{Dt} \right) H_0 + \frac{K_0}{r} + \frac{a}{c^2} K_0 - \frac{\partial}{\partial y_0} \left\{ v_0 \left[ \frac{v}{cr} (H_0 - 3N_0) - \frac{1}{c} \frac{D\mu_0}{Dt} N_0 + \frac{a}{c^2} K_0 \right] \right\}$$

Substitute  $E_0 = \frac{4\pi}{\epsilon_0} J_0$   $F_0 = 4\pi H_0$   $P_0 = \frac{4\pi}{\epsilon_0} K_0$   $Q_0 = \frac{4\pi}{\epsilon_0} N_0$

$$-\chi_0 \frac{F_0}{4\pi} = \frac{1}{4\pi c} \frac{DF_0}{Dt} + \frac{4\pi\epsilon_0 c}{4\pi} \frac{\partial}{\partial r} (r^2 P_0) - \left( \frac{2v}{cr} + \frac{3}{c} \frac{D\mu_0}{Dt} \right) \frac{F_0}{4\pi} + \frac{c}{4\pi} P_0 - \frac{a}{c^2} \frac{F_0}{4\pi} + \frac{c}{4\pi} \left( \frac{a}{c^2} - \frac{1}{r} \right) E_0 - \frac{\partial}{\partial y_0} \left\{ v_0 \left[ \frac{v}{cr} (F_0 - 3Q_0) - \frac{1}{c} \frac{D\mu_0}{Dt} \frac{Q_0}{4\pi} + \frac{1}{4\pi} \frac{a}{c^2} F_0 \right] \right\}$$

or

$$-\chi_0 F_0 = \frac{1}{c} \frac{DF_0}{Dt} + 4\pi\epsilon_0 c \frac{\partial}{\partial r} (r^2 P_0) - \left( \frac{2v}{cr} + \frac{3}{c} \frac{D\mu_0}{Dt} \right) F_0 + \frac{c}{r} P_0 + \frac{a}{c^2} F_0 - \frac{\partial}{\partial y_0} \left\{ v_0 \left[ \frac{v}{cr} (F_0 - 3Q_0) - \frac{1}{c} \frac{D\mu_0}{Dt} Q_0 + \frac{a}{c^2} F_0 \right] \right\} + c \left( \frac{a}{c^2} - \frac{1}{r} \right) E_0$$

$$-\chi_0 F_0 = \frac{1}{c} \frac{DF_0}{Dt} + 4\pi p_0 c \frac{\partial}{\partial M_r} (r^2 P_0) - \frac{2}{c} \left( \frac{v}{r} + \frac{D \ln p_0}{Dt} \right) F_0 + \frac{c P_0}{r} + \frac{a}{c^2} (P_0 + E_0) - \frac{c E_0}{r} - \frac{2}{\partial v_0} \left\{ v_0 \left[ \frac{v}{c r} (F_0 - 3Q_0) - \frac{D \ln p_0}{Dt} Q_0 + \frac{a}{c^2} P_0 \right] \right\}$$

~~Multiply~~ Divide by  $c$

$$-c \chi_0 F_0 = \frac{1}{c^2} \frac{DF_0}{Dt} + 4\pi p_0 \frac{\partial}{\partial M_r} (r^2 P_0) + \frac{1}{r} (P_0 - E_0) + \frac{a}{c^2} (P_0 + E_0) - \frac{2}{c^2} \left( \frac{v}{r} + \frac{D \ln p_0}{Dt} \right) F_0 - \frac{2}{c^2 \partial v_0} \left\{ v_0 \left[ \frac{v}{c r} (F_0 - 3Q_0) - \frac{D \ln p_0}{Dt} Q_0 + \frac{a}{c^2} P_0 \right] \right\}$$

$$(5.83) \quad -\frac{\chi_0 F_0}{c} = \frac{1}{c^2} \frac{DF_0}{Dt} + 4\pi p_0 \frac{\partial}{\partial M_r} (r^2 P_0) + \frac{1}{r} (P_0 - E_0) + \frac{a}{c^2} (P_0 + E_0) - \frac{2}{c^2} \left( \frac{v}{r} + \frac{D \ln p_0}{Dt} \right) F_0 + \frac{2}{c^2 \partial v_0} \left\{ v_0 \left[ \frac{v}{c r} (3Q_0 - F_0) + \frac{D \ln p_0}{Dt} Q_0 - a P_0 \right] \right\}$$

Integrate (45.82) over frequency:

$$\int (4\pi p_0 - c \chi_0 E_0) dv_0 = \int dv_0 \frac{DF_0}{Dt} + 4\pi p_0 \frac{\partial}{\partial M_r} (r^2 \int F_0 dv_0) - \int \frac{2}{\partial v_0} \left\{ \right\} dv_0 + \frac{v}{r} \int (E_0 - 3P_0) dv_0 - \frac{D \ln p_0}{Dt} \int (E_0 + P_0) dv_0 + \frac{2a}{c^2} \int F_0 dv_0$$

$$(45.84) \quad \int (4\pi p_0 - c \chi_0 E_0) dv_0 = \frac{DF_0}{Dt} + 4\pi p_0 \frac{\partial}{\partial M_r} (r^2 F_0) + \frac{v}{r} (E_0 - 3P_0) - \frac{D \ln p_0}{Dt} (E_0 + P_0) + \frac{2a}{c^2} F_0$$

Integrate (45.83) over frequency:

$$(45.85) \quad -\frac{1}{c} \int \chi_0 F_0 dv_0 = \frac{1}{c^2} \frac{DF_0}{Dt} + 4\pi p_0 \frac{\partial}{\partial M_r} (r^2 P_0) + \frac{1}{r} (P_0 - E_0) + \frac{a}{c^2} (P_0 + E_0) - \frac{2}{c^2} \left( \frac{v}{r} + \frac{D \ln p_0}{Dt} \right) F_0$$

Relativistic momentum eqn in comoving frame

$$\rho_{000} \frac{Dv}{Dt} = \underline{\underline{f}} - \underline{\underline{\nabla}} P + \underline{\underline{G}}_0$$

take nonrelativistic limit in spherically symmetric case:

$$\rho_{000} \rightarrow \rho_0$$

$$\rho_0 \frac{Dv}{Dt} = - \frac{GM_{r\rho_0}}{r^2} - \frac{\partial P}{\partial r} + \frac{1}{c} \int \chi_0(v_0) F_0(v_0) dv_0$$

now from (95.85),

$$- \frac{1}{c} \int \chi_0(v_0) F_0(v_0) dv_0 = \frac{1}{c^2} \frac{DF_0}{Dt} + 4\pi \rho_0 r^2 \frac{\partial P_0}{\partial M_r} + \frac{3P_0 - E_0}{r} - \frac{z}{c^2} \left( \frac{v}{r} + \frac{D \ln \rho_0}{Dt} \right) F_0 + \frac{a}{c^2} (E_0 + P_0)$$

Drop the  $\frac{a}{c^2}$  terms and write  $\partial M_r = 4\pi \rho_0 r^2 dr$  to obtain

$$- \frac{1}{c} \int \chi_0(v_0) F_0(v_0) dv_0 = \frac{1}{c^2} \frac{DF_0}{Dt} + \frac{\partial P_0}{\partial r} + \frac{3P_0 - E_0}{r} - \frac{z}{c^2} \left( \frac{v}{r} + \frac{D \ln \rho_0}{Dt} \right) F_0$$

then

$$\rho_0 \frac{Dv}{Dt} = - \frac{GM_{r\rho_0}}{r^2} - \frac{\partial P}{\partial r} - \frac{1}{c^2} \frac{DF_0}{Dt} - \frac{\partial P_0}{\partial r} - \frac{3P_0 - E_0}{r} + \left( \frac{2v}{c^2 r} + \frac{z}{c^2} \frac{D \ln \rho_0}{Dt} \right) F_0$$

$$\text{Now } \frac{D \ln \rho_0}{Dt} = - \frac{1}{r^2} \frac{\partial}{\partial r} (r^2 v) = - \frac{2v}{r} - \frac{\partial v}{\partial r} \Rightarrow \frac{1}{c^2} \left( \frac{2v}{r} + z \frac{D \ln \rho_0}{Dt} \right) = \frac{1}{c^2} \left( \frac{2v}{r} - \frac{4v}{r} - \frac{\partial v}{\partial r} \right) = - \frac{1}{c^2} \left( \frac{2v}{r} - \frac{\partial v}{\partial r} \right)$$

thus

$$\rho_0 \frac{Dv}{Dt} + \frac{1}{c^2} \frac{DF_0}{Dt} - \frac{1}{c^2} \frac{D \ln \rho_0}{Dt} F_0 = - \frac{GM_{r\rho_0}}{r^2} - \frac{\partial}{\partial r} (P + P_0) - \frac{(3P_0 - E_0)}{r} + \left( \frac{2v}{c^2 r} - \frac{2v}{c^2 r} - \frac{1}{c^2} \frac{\partial v}{\partial r} \right) F_0$$

$$(96.4) \quad \rho_0 \frac{Dv}{Dt} + \frac{\rho_0}{c^2} \left[ \frac{D}{Dt} \left( \frac{F_0}{\rho_0} \right) \right] = - \frac{GM_{r\rho_0}}{r^2} - \frac{\partial}{\partial r} (P + P_0) - \frac{(3P_0 - E_0)}{r} - \frac{1}{c^2} \frac{\partial v}{\partial r} F_0$$

On fluid-flow timescale  $\frac{\rho_0}{c^2} \frac{D}{Dt} \left( \frac{F_0}{\rho_0} \right)$  and  $\frac{1}{c^2} \frac{\partial v}{\partial r} F_0$  are  $O(\frac{v}{c})$  wrt  $\frac{\partial P_0}{\partial r}$  in both streaming limit and diffusion limit. We can then write:

$$\rho_0 \frac{Dv}{Dt} = \underline{\underline{f}} - \underline{\underline{\nabla}} P$$

Gas Energy Equation:

$$\rho_0 \left[ \frac{D\epsilon}{Dt} + p \frac{D\rho_0^{-1}}{Dt} \right] = c (F_0^o + G_0^o)$$

$c F_0^o =$  rate of nonmechanical energy input  $= \rho_0 \epsilon$

$$c G_0^o = \int_0^\infty \{ c \chi_0(v_0) E_0(v_0) - 4\pi \eta_0(v_0) \} dv_0$$

thus  $\rho_0 \left[ \frac{D\epsilon}{Dt} + p \frac{D}{Dt} \left( \frac{1}{\rho_0} \right) \right] = \rho_0 \epsilon + \int [c \chi_0(v_0) E_0(v_0) - 4\pi \eta_0(v_0)] dv_0$

but from (95.84)

$$\int [4\pi \eta_0 - c \chi_0 E_0] dv_0 = \frac{DE_0}{Dt} - E_0 \frac{D \ln \rho_0}{Dt} + 4\pi \rho_0 \frac{\partial}{\partial r} (r^2 F_0) - \rho_0 \frac{D \ln \rho_0}{Dt} - \frac{v}{r} (3P_0 - E_0) + \frac{2a F_0}{c^2}$$

$$= \rho_0 \frac{D}{Dt} \left( \frac{E_0}{\rho_0} \right) + \frac{1}{r^2} \frac{\partial}{\partial r} (r^2 F_0) + \rho_0 \frac{D}{Dt} \left( \frac{1}{\rho_0} \right) - \frac{v}{r} (3P_0 - E_0) + \frac{2a F_0}{c^2}$$

$$= \rho_0 \left\{ \frac{D}{Dt} \left( \frac{E_0}{\rho_0} \right) + \rho_0 \frac{D}{Dt} \left( \frac{1}{\rho_0} \right) - \frac{v}{\rho_0 r} (3P_0 - E_0) \right\} + \frac{1}{r^2} \frac{\partial}{\partial r} (r^2 F_0) + \frac{2a F_0}{c^2}$$

Drop the  $\frac{a}{c^2}$  term; and substitute into gas energy eqn:

$$\rho_0 \left[ \frac{D\epsilon}{Dt} + p \frac{D}{Dt} \left( \frac{1}{\rho_0} \right) \right] = \rho_0 \epsilon - \rho_0 \left\{ \frac{D}{Dt} \left( \frac{E_0}{\rho_0} \right) + \rho_0 \frac{D}{Dt} \left( \frac{1}{\rho_0} \right) - \frac{v}{\rho_0 r} (3P_0 - E_0) \right\} - \frac{1}{r^2} \frac{\partial}{\partial r} (r^2 F_0)$$

$$\Rightarrow \rho_0 \left[ \frac{D}{Dt} \left( \epsilon + \frac{E_0}{\rho_0} \right) + (p + P_0) \frac{D}{Dt} \left( \frac{1}{\rho_0} \right) - \frac{v}{\rho_0 r} (3P_0 - E_0) \right] = \rho_0 \epsilon - \frac{1}{r^2} \frac{\partial}{\partial r} (r^2 F_0)$$

further

$$\frac{1}{\rho_0 r^2} \frac{\partial}{\partial r} (r^2 F_0) = \frac{1}{4\pi \rho_0 r^2} \frac{\partial}{\partial r} (4\pi r^2 F_0)$$

hence

$$(96.9) \quad \frac{D}{Dt} \left( \epsilon + \frac{E_0}{\rho_0} \right) + (p + P_0) \frac{D}{Dt} \left( \frac{1}{\rho_0} \right) - \frac{v}{\rho_0 r} (3P_0 - E_0) = \epsilon - \frac{\partial}{\partial r} (4\pi r^2 F_0)$$

for isotropic radiation (diffusion),  $3P_0 - E_0 = 0$ ,  $L_r = 4\pi r^2 F_0$

$$(96.10) \quad \text{then } \frac{D}{Dt} \left( \epsilon + \frac{E_0}{\rho_0} \right) + (p + P_0) \frac{D}{Dt} \left( \frac{1}{\rho_0} \right) = \epsilon - \frac{\partial L_r}{\partial r}$$

Mechanical Energy Equation: take v. (96.2):

$$v \left\{ \rho_0 \frac{Dv}{Dt} \right\} = v \left\{ -\frac{GM_r \rho_0}{r^2} - \frac{\partial p}{\partial r} + \frac{1}{c} \int \chi_0(v_0) F_0(v_0) dv_0 \right\}$$

$$\Rightarrow \rho_0 \frac{D}{Dt} \left( \frac{1}{2} v^2 \right) = -\frac{GM_r \rho_0 v}{r^2} - v \frac{\partial p}{\partial r} + \frac{v}{c} \int \chi_0 F_0 dv_0$$

$$\div \text{ by } \rho_0 : \frac{D}{Dt} \left( \frac{v^2}{2} \right) = -\frac{GM_r v}{r^2} - \frac{v}{\rho_0} \frac{\partial p}{\partial r} + \frac{v}{c \rho_0} \int \chi_0 F_0 dv_0$$

$$\text{now } v = \frac{Dr}{Dt} \text{ and } \frac{v}{\rho_0} \frac{\partial p}{\partial r} = \frac{1}{\rho_0} \frac{\partial (pv)}{\partial r} - \frac{p}{\rho_0} \frac{\partial v}{\partial r} = \frac{1}{4\pi \rho_0} \frac{\partial}{\partial r} (4\pi \rho_0 v) - \frac{p}{\rho_0} \frac{\partial v}{\partial r}$$

$$\text{So } \frac{D}{Dt} \left( \frac{V^2}{2} \right) + \frac{GM_r}{r^2} \frac{Dr}{Dt} + \frac{1}{4\pi\rho_0} \frac{\partial}{\partial r} (4\pi\rho v) - \frac{P}{\rho_0} \frac{\partial v}{\partial r} = \frac{v}{c\rho_0} \int \rho_0 E_0 dv_0$$

$$= \frac{D}{Dt} \left( \frac{V^2}{2} \right) - GM_r \frac{D}{Dt} \left( \frac{1}{r} \right) + \frac{r^2 \partial}{\partial M_r} (4\pi\rho v) - \frac{P}{\rho_0} \frac{\partial v}{\partial r} = \frac{v}{c\rho_0} \int \rho_0 E_0 dv_0$$
